Matthew Cook KC, Sonia Tolaney KC & Owain Draper on behalf of Mastercard  
(Instructed by Jones Day and Freshfields  
LLP)

Daniel Jowell KC, Jessica Boyd KC, Isabel Buchanan, Ava Mayer & Aislinn Kelly-Lyth  
on behalf of Visa (Instructed by Linklaters LLP and Milbank LLP)

Kieron Beal KC, Philip Woolfe KC, Reuben Andrews, Flora Robertson & Oscar Schonfeld on behalf of  
the SSH Claimants

Thursday, 27 March 2025

(10.30 am)

MR COOK: Good morning, sir.

THE CHAIRMAN: Good morning.

MR COOK: I call Ms Webster.

THE CHAIRMAN: Yes.

MS RACHEL WEBSTER (affirmed)

THE CHAIRMAN: Thank you, Ms Webster.

Examination-in-chief by MR COOK

MR COOK: So Ms Webster, do you have hard copies of your reports in front of you?

A. I do.

Q. Good, okay.

I think also we were going to prepare a cheat sheet for you in relation to the names of the three acquirers.

Has that been --

A. I have just written them down --

Q. Okay, good.

A. -- based on the labelling from yesterday.

THE CHAIRMAN: Yes. So we are going to stay in open court for the time being?

MR COOK: We are at the moment, I understand, sir, but

I think my learned friend says we are going to be in closed quite rapidly.

THE CHAIRMAN: Oh, okay.

1 MR COOK: It was more just making sure there is a document  
2 that is handwritten in front of Ms Webster, I wanted to  
3 make sure I had observed what it was before anyone else  
4 asked.

5 THE CHAIRMAN: All right, yes.

6 MR COOK: So Ms Webster, if we could go to your first  
7 report, which is in the bundle at {RC-F1.3/2/1}, and if  
8 we could go to {RC-F1.3/2/197} of that, which is your  
9 expert declaration. If we could then turn over the page  
10 {RC-F1.3/2/198}, is that your signature?

11 A. Yes.

12 Q. Are there any corrections you would like to make to  
13 that?

14 A. No.

15 Q. Does that still represent your full and complete  
16 professional opinion?

17 A. Yes.

18 Q. Thank you very much.

19 If we could also have up -- then turn up on  
20 the screen {RC-G1.2/1/1}, please -- sorry, {RC-G1.2/2/1}  
21 it will be.

22 Again, is this your reply report in these  
23 proceedings?

24 A. Yes.

25 Q. If we could turn on that, please, to {RC-G1.2/2/149}, is

1           that your signature?

2           A. It is.

3           Q. Are there any corrections you would like to make to this  
4           report?

5           A. No.

6           Q. Does that represent your full and complete professional  
7           opinion?

8           A. Yes.

9           Q. If we could also have up on screen {RC-Q5/4/1}, please.

10                    These are some charts that you have prepared by  
11           reference to acquirer B data, and we are in open, so we  
12           should refer to them on those terms, and -- well,  
13           firstly, can you confirm that these -- that there are no  
14           corrections you wish to make to them and these represent  
15           your full and complete professional opinion?

16           A. They do.

17           Q. Please could you just tell the Tribunal what these  
18           graphs show, in your opinion?

19           A. Yes. So my team produced these charts following  
20           the response that we received to the experts' questions,  
21           it was a response from acquirer B, which we received  
22           the day of submission of our reply reports. In that --  
23           in those responses, acquirer B confirmed, or set out  
24           the treatment of how they classified UK-EEA transactions  
25           following Brexit, and my understanding of that response

1 to the experts' questions was that from January 2021,  
2 UK-EEA transactions would no longer be recorded as  
3 intra-regional transactions in the data -- in their  
4 data. So my team produced an analysis of transactions  
5 in the intra-regional categorisation within acquirer B's  
6 data and that is what this -- these charts show.

7 So the first charts show, for both standard  
8 contracts and contract type called -- am I allowed to  
9 say? It is not ... PTC, that is the totality,  
10 I understand, of non-cost-plus contracts for acquirer B.  
11 It shows a drop off in the volume of transactions from  
12 sort of between 7.5 and 10 million.

13 Q. Just to avoid the double negative point, non-cost-plus  
14 is basically blended?

15 A. Yes. Yes. So --

16 Q. So what do you take, therefore, from that graph?

17 A. So this -- these graphs seem to me to be consistent with  
18 the response that we received from acquirer B saying  
19 that there had been a reclassification of UK-EEA  
20 transactions because there is this sudden fall off in  
21 the volume of such transactions, of intra-regional  
22 transactions, from January 2021. What they don't --  
23 these charts don't show is sort of where those  
24 transactions have been reclassified, and I don't think  
25 we know the answer to that question, but clearly they're

1 no longer within the intra-regional classification.

2 Q. So in relation to anything that is left in  
3 intra-regional, what are your views in relation to that?

4 A. So it would mean that whatever transactions are left,  
5 they're clearly a small subset of the transactions that  
6 were there, and -- well, it could mean that they are not  
7 UK-EEA transactions that are left. I think that's one  
8 point we don't know, and it's not possible to discern  
9 that from the data. Even if they were UK-EEA  
10 transactions that somehow have been left, I wouldn't  
11 think that they -- well, I would be concerned that they  
12 may not be representative of the full set of  
13 intra-regional -- sorry, UK-EEA transactions, which  
14 would be the ones that one would wish to analyse for  
15 a purpose of pass-on for a Brexit event.

16 MR COOK: Thank you very much, Ms Webster.

17 Cross-examination by MR WOOLFE

18 THE CHAIRMAN: Mr Woolfe.

19 MR WOOLFE: Good morning, Ms Webster.

20 A. Good morning.

21 Q. Now, we are going to actually start off with some  
22 matters of economic theory. We spent a long time in  
23 Trial 2A on your benchmark case, we will not be spending  
24 anything like that length of time today.

25 I am sorry, Professor Waterson.

1 Can we go, please, to {RC-F1.3/2/50}.

2 Here, you form your expectations of economic theory  
3 based upon the same benchmark case which you relied upon  
4 for the purpose of Trial 2A, did you not?

5 A. Yes.

6 Q. You recap your four cumulative conditions, you say they  
7 are cumulative at paragraph 4.20. So can we just go  
8 over the page, please, to {RC-F1.3/2/51}. Rather than  
9 me read it out, perhaps if you and everybody else can  
10 just read those paragraphs, (a), (b), (c) and (d), but  
11 those are your four conditions.

12 Now, as I understand, the two conditions --

13 THE CHAIRMAN: Do you want to just give us a chance to  
14 read it?

15 MR WOOLFE: Sure.

16 (Pause).

17 The two conditions that you query whether they apply  
18 in the context of acquirer pass-on are the first  
19 condition, which is commonality of interchange fees and  
20 out-of-market constraints, and the second, which is  
21 merchants -- the degree to which merchants' price  
22 sensitivity changes in response to price. I just want  
23 to take those in turn, but you essentially think  
24 the conditions (c) and (d) you have here are fulfilled;  
25 is that right?

1 A. Yes.

2 Q. Now, in terms of the first condition, which is  
3 commonality of costs and out-of-market constraints,  
4 I think when we looked at this in Trial 2A you agreed  
5 this is essentially about inelasticity of demand; is  
6 that right?

7 A. Yes, I think it combines inelasticity in market demand,  
8 which is, if there is no out-of-market constraint, then  
9 I would expect market demand to be inelastic, and it  
10 combines that with a commentary on the degree of  
11 competitive intensity. So if one were to find that  
12 there is a material out-of-market constraint, then  
13 the intensity of competition within the market becomes  
14 important.

15 Q. Right. But your evidence is that if there is not  
16 a significant out-of-market constraint, so market demand  
17 is inelastic in that sense, the intensity of competition  
18 is not so important; that is your view?

19 A. That's correct.

20 Q. Now, if we turn to what you actually query about this,  
21 can we go to {RC-F1.3/2/52}, please, paragraph 4.25.  
22 You seem satisfied, essentially, there that MIFs are  
23 a common cost --

24 A. Yes.

25 Q. -- to all acquirers. So the aspect of your first point

1           that you are querying is set out at 4.26, which is  
2           whether or not acquirers faced a material out-of-market  
3           constraint?

4       A.   Yes.

5       Q.   Which you essentially interpret as being whether or not  
6           merchants could start doing something else other than  
7           accepting cards?

8       A.   Yes.

9       Q.   Now, is it -- I think it is also fair to say on this  
10          section of your report, and you explain below, that you  
11          are essentially drawing a distinction between  
12          the situation post-2015 on the one hand, where you more  
13          or less accept this condition is fulfilled, and  
14          the situation during the Merricks claim period on  
15          the other; is that right?

16      A.   Yes.

17      Q.   Because at the time you wrote this report, Merricks was  
18          still technically part of the proceedings?

19      A.   Yes, that's right, and it's consistent with the position  
20          that I took in merchant pass-on is, given high  
21          acceptance of cards generally in the retail market,  
22          I would expect most cards to consider accept -- sorry,  
23          most merchants to accept -- consider accepting cards as  
24          a -- well, not to necessarily think that there is an  
25          alternative not to. So I -- in -- in this case, I don't

1 rule out that there might be some merchants for which it  
2 is a feasible option to not accept cards, but I think  
3 it's unlikely, in the period of the claim from sort of  
4 2015 onwards.

5 Q. Yes, so actually, in terms of the claims, we have  
6 the CICC claims which are post-2015 --

7 A. Yes.

8 Q. -- so you accept this was fulfilled for that period?

9 Now, the merchant claims, the other merchant claims,  
10 some of those go back to 2011. But you would accept,  
11 would you not, that for most of the period since 2011,  
12 the merchants who actually accepted cards, they did not  
13 really have an option not to accept them, did they?

14 A. That -- that may be slightly strong. I don't -- I don't  
15 have a firm view on quite what the situation would have  
16 been in 2011. It may be more likely that there were  
17 some that didn't need to accept cards at that point, but  
18 I don't -- I think my conclusions are not sort of  
19 reliant on that.

20 Q. No, but the Merricks claim period went back to 1992 and  
21 you were saying there might be a difference if you go  
22 back that far?

23 A. That's right.

24 Q. But there is unlikely to be a substantial difference --

25 A. Yes, I agree.

1 Q. -- between 2011 and 2015?

2 Now, can we go, please, to {RC-J2.2/87/1}, perhaps  
3 we start on page 1 so you can see what the document is  
4 and then we will go to a page within it. You will  
5 recall we spent quite a lot of time on this document in  
6 Trial 2A.

7 Can we go to {RC-J2.2/87/252} within that document,  
8 please. Now, this was a graph in a sense produced by  
9 RBB to show how pass-on occurs, and we have a downward  
10 sloping demand curve and two upward sloping supply  
11 curves. There are two because we have a cost increase,  
12 so supply curve S is before the cost increase and supply  
13 curve S' is after the cost increase, yes?

14 A. Yes.

15 Q. So what we can see, at paragraph 6.30, RBB say:

16 "... with downward-sloping demand and upward-sloping  
17 supply, the market price will increase by less than  
18 the amount of the cost increase."

19 That is essentially because, as I understand it,  
20 the cost increase is given by the vertical distance on  
21 the -- on the left-hand axis, the vertical height  
22 difference between point A and point C, it is between  
23 the two points of intersection; is that right?

24 A. Yes.

25 Q. It goes on to say, this is at the bottom of the page, we

1 might have to go over:

2 "The more price-sensitive -- or elastic ..."

3 If we go over the page {RC-J2.2/87/253}:

4 "... is demand, the greater the reduction in volume  
5 associated with a given price increase."

6 But then, can we go down to paragraph 6.32, please,  
7 they go on to say:

8 "... the extent of industry-wide pass-on in  
9 competitive markets will depend on the relative slopes,  
10 or elasticities, of supply and demand. The steeper/less  
11 elastic is the demand curve relative to the supply  
12 curve, the greater the extent to which the cost increase  
13 will be passed through ..."

14 They show two figures below. They say:

15 "Indeed, if the supply curve is perfectly horizontal  
16 (ie perfectly elastic), the predicted pass-on will be  
17 100%, irrespective of the exact slope/elasticity of  
18 demand."

19 Would you agree with that?

20 A. Yes. I would note that these charts are all about  
21 market demand and supply, which may be relevant.

22 Q. Okay, yes, so it is about market demand and supply. But  
23 if you are thinking about the market for card acquiring,  
24 so the suppliers in the market are the acquirers and  
25 the customers are the merchants, one would expect supply

1 -- market supply to be pretty price elastic, would you  
2 not?

3 A. So what I would expect, and I think I've said this in my  
4 report, for any individual acquirer that is in  
5 the market, I expect it to have a marginal cost that it  
6 faces which is flat, so it wouldn't expect the marginal  
7 cost for each incremental merchant that they serve or  
8 each incremental transaction that they process, I don't  
9 expect the cost that they incur to go up as transaction  
10 volumes go up. So I think there would be a flat  
11 marginal cost curve.

12 I don't know about the supply curve in this  
13 instance, because that's about putting together all of  
14 the acquirers in the market and it might be that as more  
15 acquirers enter the market, they're entering with  
16 slightly higher costs of serving customers.

17 Q. But the existing suppliers -- the existing acquirers who  
18 are there could expand supply pretty easily, could they  
19 not?

20 A. Yes, I suppose that's right, yes, that's a fair point.

21 Q. In fact -- I think you accept that point --

22 A. Yes.

23 Q. -- if we go to {RC-F1.3/2/55} -- this is your third  
24 report, and I think that is a wrong reference -- no,  
25 this is right. So this is -- yes, this is your -- where

1       you deal with the third assumption, which is "Constant  
2       marginal cost and no capacity constraints". You mention  
3       the possibility, at 4.35, of "bottlenecks", and you say  
4       that you do not think there is -- I think, in 4.36, you  
5       make your point about marginal costs being the same, and  
6       you say at the end of that paragraph:

7                "In addition, I am not aware of any reasons to think  
8       that acquirers may have been unable to increase or  
9       decrease the amount of acquired volumes in response to  
10      changes in IFs and MSCs."

11               So you simply accept that we have got a highly  
12      elastic demand situation here -- highly elastic supply  
13      situation?

14      A.   So I'm saying that the marginal cost curve for any  
15      individual acquirer will be flat and that may have  
16      implications for the market elasticity of supply, but  
17      whether or not it's entirely flat, I don't -- I don't  
18      know.

19      Q.   Okay, so can we go back to the second point of your four  
20      conditions, the second one that you query. If you go  
21      back to -- if we go back to page {RC-F1.3/2/53} in this  
22      document, paragraph 4.29. This is about "Potential  
23      changes in merchants' price sensitivity in response to  
24      changes in MSCs". I think --

25      THE CHAIRMAN: You need to keep your voice up a little bit.

1 I think you are sort of tailing off a little bit.

2 MR WOOLFE: Thank you, sir.

3 So at paragraph 4.30, we need to go over the page  
4 {RC-F1.3/2/54}, you are saying that -- your assumption  
5 is about the shape of the demand curve over the relevant  
6 increment of price; is that right?

7 A. Yes, and the first part of this paragraph is in relation  
8 to merchant pass-on, so it relates to end consumers'  
9 willingness to shop around in response to a change in  
10 prices where that change in prices is related to  
11 a change in MSC cost that merchants face in  
12 the counterfactual relative to the factual.

13 Q. We went over this in Trial 2A, but your point was that  
14 because it is a relatively small increment of prices  
15 being considered, any change in price sensitivity would  
16 be small and we had a discussion about the shape and  
17 curvature of the demand curve --

18 A. That's right.

19 Q. -- but that is your point, essentially?

20 A. Yes.

21 Q. Whereas what you are saying here, at paragraphs 4.31 and  
22 4.32, is that because MIFs are a much larger proportion  
23 of MSCs than MSCs are of services downstream, that there  
24 may be more of an issue about price sensitivity --

25 A. That's right.

1 Q. -- changing here.

2 But it is fair to say that in your first report, you  
3 said that this issue of price sensitivity is only  
4 a subsidiary factor, did you not?

5 A. I don't recall.

6 Q. Well, if we go to {RC-F/14/42}, this is your first  
7 report, volume 1 of your first report, and you -- sorry,  
8 42, not 32.

9 THE CHAIRMAN: Is this the Trial 2A report?

10 MR WOOLFE: This is the Trial 2A report, yes.

11 THE CHAIRMAN: Okay.

12 MR WOOLFE: The Trial 2A first report.

13 THE CHAIRMAN: Yes.

14 MR WOOLFE: I will try and be consistent and say "first",  
15 meaning properly your first and third, meaning your  
16 first for the acquirer pass-on. I will try and do that.

17 We have paragraph -- starting at 3.34, you had set  
18 out the same four conditions, and you say at 3.34,  
19 referring to the commonality of cost and out-of-market  
20 constraints point, you say:

21 "The first of these assumptions [so that assumption]  
22 is the central determinant of the cost pass-on rate of  
23 100% in the benchmark case."

24 If we go over the page to {RC-F/14/43},  
25 paragraph 3.37, you describe all the other assumptions

1 as ensuring:

2 "... that this incentive to pass-on fully ... is not  
3 mitigated or exacerbated by other relevant market  
4 [conditions]."

5 So it is fair to say that you do see these as being  
6 -- those three conditions as being less important in  
7 some respect?

8 A. Yes, I think that was particularly the case in merchant  
9 pass-on given the nature of the cost change that was  
10 being investigated.

11 Q. Now -- but this is setting out your benchmark case in  
12 theoretical terms, is it not?

13 A. Yes, but as relevant also to merchant pass-on.

14 Q. Can we go to your third report now, so your first report  
15 for APO, at {RC-F1.3/2/54}, and just have paragraph 4.33  
16 I want to look at. This is where you discuss -- thank  
17 you -- how changing price sensitivity could be relevant  
18 to the rate of pass-on, and what you say is that -- you  
19 are looking at, in a sense, if the MSC decreased?

20 A. Yes.

21 Q. If:

22 "... merchants were to become less price sensitive  
23 as the MSC decreases, this would limit the extent to  
24 which a cost decrease would be passed on."

25 As I understand it, that would be because there is

1 not so much incentive for acquirers to cut prices if  
2 they do not win so much new business by doing so; is  
3 that the logic?

4 A. I -- I don't think so. This is about how the merchants  
5 respond when MSCs are at a different level. So -- so  
6 perhaps, actually, an easier way to describe it, which  
7 I think would be responsive to your question of  
8 yesterday, sir, is, if one thinks about an increase in  
9 MIF costs, given how important MIF costs are as  
10 a proportion of MSCs, a change -- a sort of substantial  
11 change in the MIF cost could lead to a substantial  
12 change in MSC costs for a merchant, and let's say that's  
13 all pushing the price up. So what this point is saying  
14 is it could be that that higher price point, what  
15 happens is it really causes merchants to engage with,  
16 "Oh, gosh, this is actually a not insubstantial cost  
17 now, I'm going to pay a bit more attention to it and  
18 therefore I might then choose to shop around a bit more  
19 and see if I can get a better deal".

20 I think it's possibly the reverse of your point,  
21 Professor Waterson, about Marshall's third law. If,  
22 actually, MIFs have gone down and the MSC has become  
23 less important as a cost for merchants, they may be more  
24 inclined to sort of say, well, I don't know whether it's  
25 let sleeping dogs lie, I'm not sure if that's quite

1           the right expression, but I don't need to pay so much  
2           attention to it, and that means less likelihood of  
3           engaging in with other acquirers as to -- to work out  
4           what savings could be made.

5       PROFESSOR WATERSON: I know we are in the realms of theory  
6           at the moment, but is there any evidence regarding  
7           shopping around?

8       A. Oh, the PSR, I think, did have quite a lot of evidence  
9           for the degree to which merchants are shopping around.  
10          I think they found that that was more likely for  
11          larger merchants, less likely for smaller merchants.

12       PROFESSOR WATERSON: No, I meant as opposed -- really, when  
13          the MIF went up rather than going down.

14       A. Oh. Not that I'm aware of.

15       PROFESSOR WATERSON: So this is speculation on your part?

16       A. Yes, that's absolutely right, and the conclusion that  
17          I draw is it could be that if -- if that price  
18          sensitivity behaves as I've just described in that  
19          example, that would point to pass-on below 100%. It  
20          could be that the alternative is that price sensitivity  
21          changes in a different way such that actually you get  
22          more than 100% pass-on. So I think I'm sort of quite  
23          clear, it could go either way. But either way there is  
24          some uncertainty therefore, and it's one of the reasons  
25          why I think in this case it's really helpful to look at

1           the empirical evidence, especially because we actually  
2           can look directly at the empirical evidence.

3       PROFESSOR WATERSON: Thank you.

4       MR WOOLFE: So essentially this could cut either way?

5       A. Yes.

6       Q. So simply as a matter of theory, there is no reason, as  
7           a matter of economic theory based on this, to doubt that  
8           pass-on will be high, is there?

9       A. I think what I'm saying is I don't -- there is some  
10           uncertainty as to quite what the pass-on would be.  
11           I can't investigate directly things like changing --  
12           changes in merchant price sensitivity to different  
13           levels of the MSC, so I note that there's just an  
14           uncertainty, and I don't -- I can't tell you which  
15           direction it goes in, so it's not that theory points me  
16           specifically to below 100% pass-on. I'm not saying  
17           that, I'm saying let's look at the evidence.

18      Q. But in a situation where you have very inelastic demand  
19           at current levels and elastic market supply as well, you  
20           are going to be expecting a high pass-on rate, and this  
21           factor does not really point you, in itself, in either  
22           direction in the absence of evidence, does it?

23      A. This second factor points to an uncertainty which would  
24           exist even if you've got inelastic demand and quite  
25           elastic supply.

1 Q. Do you think that this uncertainty about price  
2 sensitivity could account for acquirers having to absorb  
3 37% of the total cost of the MIF?

4 A. I mean, it's possible. I think that's why I want to  
5 look at the evidence.

6 Q. Now, we are going to move on to your analysis of the PSR  
7 dataset.

8 I am afraid at this point, sir, we are going to have  
9 to go into closed session fairly shortly, because  
10 Ms Webster's material is not, I think, marked as PSR  
11 confidential, but then we could get into some material  
12 that is, and so I think from now on, we are going to  
13 have to be in closed session.

14 THE CHAIRMAN: All right.

15 All, right, can we go into closed session. Thanks.

16 (In private)

17 (4.17 pm)

18 (The hearing adjourned until 10.30 am on Monday,

19 31 March 2025)
