

This Transcript has not been proof read or corrected. It is a working tool for the Tribunal for use in preparing its judgment. It will be placed on the Tribunal Website for readers to see how matters were conducted at the public hearing of these proceedings and is not to be relied on or cited in the context of any other proceedings. The Tribunal's judgment in this matter will be the final and definitive record.

IN THE COMPETITION
APPEAL TRIBUNAL

Case No: 1403/7/7/21

Salisbury Square House
8 Salisbury Square
London EC4Y 8AP

Wednesday 15th January 2025

Before:
Ben Tidswell
Dr William Bishop
Tim Frazer

(Sitting as a Tribunal in England and Wales)

BETWEEN:

Dr. Rachael Kent

Class Representative

v

Apple Inc. and Apple Distribution International Ltd

Defendants

A P P E A R A N C E S

Mark Hoskins KC, Tim Ward KC, Michael Armitage, Matthew Kennedy, Antonia Fitzpatrick
(Instructed by Hausfeld & Co. LLP) On behalf of Dr. Rachael Kent

Marie Demetriou KC, Brian Kennelly KC, Daniel Piccinin KC, Hugo Leith, Hollie Higgins
(Instructed by Gibson, Dunn & Crutcher UK LLP) On behalf of Apple Inc. and Apple
Distribution International Ltd

Wednesday 15 January 2025

(10.32 am)

MR KENNELLY: Good morning on the matter we had discussed yesterday, I will not be pressing that.

THE CHAIRMAN: That is good to hear.

Submissions by MR KENNELLY (continued)

MR KENNELLY: We had discussed the options available to developers, and just to continue with that theme, my submission is if some large, well-resourced developers are choosing to steer customers away from the App Store, that shows it is a realistic thing for developers to do. If others, who are equally well resourced are choosing to give end users the option to use the App Store to transact, rather than encouraging them to go elsewhere, that suggests that Apple's price must be competitive with the alternative options, especially once quality is taken into account as well. Those clues and indications should come as no surprise because we see how concentrated the commerce is on the App Store, both on the user side and on the developer side. This concentration increases the force of the constraints that we have been discussing.

Just to show you that, can I look at end users first. That is presented in Professor Hitt's third

1 report, {C3/8/88}. These numbers are confidential.
2 I am looking at paragraph 168b. On page 88, (b)
3 about four lines down, Professor Hitt says that he
4 is looking at the users who spend more than £1,000
5 on the App Store using their iPhone in 2022. He
6 notes the current retail price of an iPhone then, it
7 was the iPhone 15, and he notes that would mean that
8 users would be spending more on the UK store front
9 in one year than the cost of a flagship iPhone. He
10 notes the percentage of users that is made up by
11 those high spenders, but then he notes the
12 percentage of App Store's commissions for which
13 there are spending accounts. You see the percent
14 there, the confidential figure.

15 He says if prices on the UK store front
16 increased, he would expect these high spending
17 customers to substitute away from the App Store
18 because such a price increase would have a large
19 impact on their total expenditure. You have my
20 point, I took you to it yesterday, about the
21 percentage of users who take into account the prices
22 on the App Store when purchasing a device. We saw
23 that, no need to go back to it. It was from the
24 CMA's accent survey from 2022. Of course losing
25 these high spenders would mean the revenue from the

1 sale of the device itself and the significance of
2 the device sales, again, is well understood. The
3 significance of the device sales is also in the
4 report. I will just give you the reference,
5 {C3/8/71}.

6 Sticking with concentration --

7 MR FRAZER: Mr Kennelly, is there anything in the report
8 which indicates that these users, the ones who are
9 spending this percentage that is noted there, have
10 choices? In other words, are they spending this
11 amount of money on apps for which there are other
12 places where they can make purchases, or make in-app
13 purchases, so they actually have choices should the
14 Commission increase, your submission is they would
15 go elsewhere. Is there anything in the report that
16 suggests they do have that freedom to go elsewhere
17 in relation to these apps?

18 MR KENNELLY: Yes, because there is data in the reports
19 about the concentration of commerce, depending upon
20 the genres. For example games, and particular
21 games, we will come to that, and developers
22 concentration account for a large proportion of the
23 commerce. In respect of those very popular games,
24 there is obviously choice across other platforms and
25 in those other platforms it is possible to make

1 in-app purchases and other types of purchases
2 similar to those that are made on the App Store.

3 MR FRAZER: So we would expect those users to fall within
4 those groups?

5 MR KENNELLY: Absolutely, yes.

6 MR FRAZER: I understand.

7 MR KENNELLY: The same report, {C3/8/94} we see exhibit
8 3, which is the share of App Store commissions
9 associated with the top consumers in 2022. If you
10 look at the column on the far left, that again shows
11 you just how concentrated the commerce is and the
12 importance of that high spending cohort.

13 If you switch over to the next page, page 95,
14 we see the concentration even more pronounced on the
15 developer's side. You see the amount of App Store
16 commission that is coming from the top, 0.005 per
17 cent of developers, in the top 0.01 per cent. At
18 paragraph 176 Professor Hitt speaks to that. He
19 finds that those top developers alone account for
20 that percent of App Store commissions. So that
21 small number of developers is accounting for that
22 percentage of App Store commissions, and that top
23 percent of developers, which corresponds to a larger
24 number but still a small one in absolute terms, a
25 very small one, accounts for a very substantial

1 percentage of App Store commissions. So it is
2 highly concentrated. When we ask about switching
3 threats, we are looking at a very small proportion
4 of users and a very small proportion of developers.
5 Of course, when we speak of switching for developers
6 we mean switching away from in-app purchases to
7 advertising and monetization through other routes.
8 As Professor Hitt goes on to say, at the bottom of
9 paragraph 176, that means coming over the page, even
10 a small number of large developers can constrain
11 Apple if they start using monetization strategies
12 that do not generate any commissions for the App
13 Store.

14 THE CHAIRMAN: It is an interesting feature of the
15 market, is it not, it's a two-sided market. I do
16 not know whether you would say it is unusual but it
17 is certainly not the orthodox view of the two-sided
18 market because you have quite a small subset on both
19 sides of the market who are actually providing the
20 value, the revenue, and then you have also got the
21 complication that, as we discussed yesterday and a
22 little bit this morning, there is a further revenue
23 stream that comes in from the device activity that
24 Apple takes. So actually the financial position in
25 the two-sided market is quite complicated, is it

1 not? I do not know whether that makes any
2 difference to the analysis.

3 MR KENNELLY: It does because it demonstrates how the
4 constraints are operating on multiple levels. Apple
5 is competing to keep these small number of high
6 spending consumers and a small number of high
7 spending developers, and to lose the users does not
8 just mean the loss of the Commission, which is
9 substantial, but the device sale revenues which are
10 also very substantial. How does it keep those small
11 number of users and small number of developers? It
12 needs to provide competitive prices but also highly
13 competitive quality. Of course these users and
14 developers are the ones best placed to switch. They
15 are the ones for whom changes in price matters the
16 most, and they are the ones who have the greatest
17 ability and incentive to switch if they choose to.
18 Users switching out of the device, developers
19 different monetization strategies because they have
20 resources to steer their millions of customers down
21 different monetization routes if that is what they
22 choose to do in their best interests. The
23 suggestion that developers are somehow hamstrung in
24 this regard is completely implausible. These
25 developers are huge undertakings. One of them,

1 Activision Blizzard King, was acquired by Microsoft
2 in 2023 for \$69 billion. We had that merger case in
3 this Tribunal. The idea that a developer of that
4 scale, with its expertise and advertising budget, is
5 unable to steer its millions of customers away from
6 IAP, if it chooses to, is completely unrealistic.

7 So in terms of constraints from developers and
8 users, the evidence could not be any clearer. But
9 there are other indications that help you look at
10 whether Apple can act independently of its customers
11 and competitors. That is what Apple has actually
12 done and the decisions that Apple actually made
13 since the App Store was launched in 2008.

14 Ms Demetriou has explained to you how it is
15 impossible to characterise what happened in 2008 as
16 Apple acting as a monopolist. Then we ask what has
17 happened since then? Apple has not increased
18 prices, it has only decreased them, despite the
19 growth of the App Store and iOS as a platform, and
20 despite the huge increase in quality in terms of
21 what Apple is offering to developers since then.

22 My learned friend, Mr Hoskins, said that tells
23 you nothing because it is in Apple's interest to
24 keep selling more devices and more apps. But, of
25 course if there were no competitive constraints

1 operating on Apple, it could well be better for it
2 to raise prices, output might well reduce but it
3 would still be making the same or more revenue and
4 that is not what has happened. That is another clue
5 in the indisputable factual record which helps you
6 decided whether we are right about constraints or
7 Dr Kent.

8 That is our approach to these issues. We focus
9 first on the substitution possibilities that are
10 undeniable. Then we look for clues in the factual
11 record to confirm that those substitution
12 possibilities do in fact impose material constraints
13 on Apple.

14 Dr Kent's approach is quite different. She
15 compares Apple's commissions to the commissions that
16 she says Apple would charge in a counterfactual
17 world, in which Apple faced even more competition.
18 That is having competing app stores on iOS itself
19 and competing payment systems for in-app purchases.
20 She advances, through Dr Singer, a hypothetical
21 monopolist test. She concludes from the HMT that
22 Apple is profitably sustaining a SSNIP in both the
23 four alleged markets by comparison with the
24 counterfactual competitive price that Dr Singer
25 calculates. Because Apple can sustain that SSNIP,

1 it follows that Apple's market power is not
2 constrained competitively, says Dr Singer.

3 You will have seen in the evidence that there
4 are major flaws in that analysis, but more
5 fundamentally, this is just the kind of circular
6 reasoning that this Tribunal deprecated in the
7 *Hydrocortisone* case. In the time available I cannot
8 go back to that authority, but the Tribunal will
9 have the general point. That is where the Tribunal
10 said it is tempting, but wrong to look at a price
11 and say, "That looks very high and because that
12 looks like a very high price it can only have been
13 imposed by a dominant undertaking. Then because we
14 assume the undertaking is dominant, we have to
15 assume the market definition is that which would
16 provide for that dominance." That circular
17 reasoning is inappropriate. It has the the
18 potential to ignore, real world evidence about
19 constraints that operate in fact.

20 THE CHAIRMAN: On that, obviously you have then got the
21 cellophane fallacy, have you not, which is why I
22 think they go down that path, as I understand it.
23 In the cellophane fallacy you are actually doing
24 something a bit different, are you not, you are
25 actually starting with your proposition of your

1 market, the narrow market you think is the
2 appropriate market, and then you ask yourself the
3 question if, in those circumstances, it effectively
4 looks like a monopoly, you need to be careful about
5 the price that is being charged as the reference
6 point for the SNNIP test. But *Hydrocortisone* does
7 not say you should not do that.

8 MR KENNELLY: No of course not, and of course the problem
9 the cellophane fallacy identifies was well
10 understood and we understand entirely why one must
11 watch out for that, but the focus then is on the
12 comparator, if possible, the comparator that one
13 chooses to avoid the trap that is identified by the
14 cellophane fallacy.

15 THE CHAIRMAN: As I understand it, you do not really get
16 into that debate. I think your position, as I
17 understand it, is that is not the right starting
18 point because I think you are saying if you are
19 going to start anywhere, you should be starting no
20 narrower than an all operating system transactions
21 market. Is that right?

22 MR KENNELLY: The transactions market, indeed. We say
23 that is the correct starting point because that is
24 the one we see borne out in the facts. But if you
25 are concerned about a cellophane fallacy, if you are

1 engaging with the cellophane fallacy concern that
2 Dr Kent raises, then you have to look at the
3 comparator that Dr Kent is using to say, "We cannot
4 start with Apple's prices, we have got to start with
5 somebody else's."

6 THE CHAIRMAN: Yes.

7 MR KENNELLY: There, we say, there is a fundamental flaw
8 in the comparator they have chosen.

9 THE CHAIRMAN: I understand that point. I just want to
10 be clear about the structure of your argument, I am
11 more interested in that because it is plain what
12 they are doing, and you have criticised it, you may
13 be right who knows, we will find out. I think as I
14 understand it, it comes out of a little bit of an
15 exchange yesterday where I think possibly I might
16 have confused you or not made myself clear about the
17 question I asked, and I think the answer you gave me
18 was probably something of a surprise to me. But on
19 reflection, I think you probably meant something
20 different and that is this question of the
21 aftermarket.

22 MR KENNELLY: Yes I was discussing our response to
23 Dr Kent's case, indeed.

24 THE CHAIRMAN: As I understand it, we have been talking
25 about a two-sided market this morning, so there

1 clearly is a market of some sort which involves
2 transactions.

3 MR KENNELLY: Yes.

4 THE CHAIRMAN: The question really is, in the context of
5 the discussion we were having yesterday and now,
6 forgive me, I am shifting back to devices again
7 rather than transactions. But the question really
8 there was how distinct from the devices market is
9 that, so as to decide whether or not we should treat
10 it for market definition purposes as a separate
11 market.

12 MR KENNELLY: Yes.

13 THE CHAIRMAN: So you are not saying that it does not
14 exist. You are just saying that, therefore, for the
15 reasons we discussed yesterday, it should not be
16 viewed as being separate. Is that right?

17 MR KENNELLY: It is a separate market, but it operates to
18 exercise important constraints on the transactions
19 markets that we identify as the relevant markets in
20 the case.

21 THE CHAIRMAN: Yes, so the degree of substitution that
22 comes through the devices market is sufficient to
23 allow the market definition to encompass the broader
24 -- I do not think you put it as a systems market
25 though, do you?

1 MR KENNELLY: No, no, what Professor Hitt says is that
2 what we see in reality is a combination. There are
3 aspects of systems markets here because of the
4 constraints that device markets operate, but also
5 the dual markets that are the relevant markets for
6 the purposes of the competition analysis. Just to
7 be clear, I have now left my positive case and I am
8 dealing with Dr Kent's case and responding to that.
9 That is why I am engaging with the cellophane
10 fallacy and I am drawing attention, if I may, to the
11 flaw in the comparator that she has chosen.

12 Her starting point for the competitive price is
13 a price charged by one or two, and the facts on this
14 are very clear, much lower quality, much less
15 successful app marketplaces on a different platform.
16 She says that she can prove that Apple is a
17 monopolist by showing that Apple charges a price
18 that is more than 5 per cent above that benchmark,
19 with no quality analysis at all. Of course, the
20 comparator here is the Epic Games store. So she
21 says that in the markets, that she calls her primary
22 counterfactual, it would mean that no digital
23 transaction platform could lawfully charge more than
24 5 per cent more than the Epic Games store, even
25 though it is indisputable the Epic Games store has

1 been unprofitable since it launched in 2018, even
2 since then, unprofitable, it is of lower quality
3 than the other platforms and we say it offers
4 nothing like the value that Apple provides. Her
5 case implies that competition law must intervene any
6 time that a supplier charges a price which is more
7 than 5 per cent higher than the price charged by
8 their lowest priced competitor. To do so, and this
9 is critical in this case, without any regard to
10 quality or product differentiation.

11 Just while we are dealing with the HMT argument
12 that is raised by Dr Kent, I want to briefly address
13 you on the CMA's position on the legal principles,
14 very briefly. The CMA said in its written
15 observations that the overarching test on market
16 definition is whether there is a sufficient degree
17 of interchangeability between the focal product and
18 other products. They said a range, I am not going
19 back to it in the time, they just said a range of
20 evidence may be relevant, quite properly they said
21 there is no exhaustive or mandatory list of factors
22 that needs to be taken into account and they noted
23 that an HMT is often used as a conceptual framework
24 but it is not a necessary one.

25 So far so good. I refer to these because the

1 CMA's skeleton argument, that we saw last week,
2 could be read, and I may be unfair here, but giving
3 the impression that the HMT or the SSNIP is the
4 beginning and end of the market definition exercise.
5 And there is a suggestion, again no need to go to it
6 but just to put down a marker, paragraphs 32 and 33,
7 that it is the application of the HMT SSNIP test
8 that determines the scope of the relevant product
9 market. If that is what is said, we respectfully
10 disagree, for the reasons set out in the CMA's own
11 pleading.

12 There is also a short point on the law on
13 dominance in the CMA's skeleton. I will touch on it
14 very briefly. There is a reference to Apple's share
15 of the relevant market. They say, if the market is
16 as defined by Dr Kent, and it is persistently above
17 50 per cent, that would result in a presumption of
18 dominance, where Apple would carry the burden of
19 disproving dominance. We do not understand even
20 Dr Kent to be saying that Apple bears that burden,
21 and we would say that is wrong as a matter of law.
22 But we will see, the CMA, I may have misunderstood
23 and the CMA may clarify that when they come to make
24 their submissions.

25 There is a final point I need to deal with on

1 this topic, and that is Dr Kent's contention that
2 her two alleged product markets are distinct. She
3 says, as we have been discussing, that the payments
4 market is an aftermarket from the distribution
5 market. We say, again, that makes no sense because
6 developers know full well what commission applies to
7 IAP transactions when they decide to publish an app
8 on the App Store. They make a single decision as to
9 what they want to charge, if anything, for downloads
10 and in-app transactions. The in-app transactions
11 and download prices are just two different ways for
12 monetising an app. Unsurprisingly, for Dr Kent,
13 Mr Holt has found that every store that offers
14 in-app transactions charges the same price for them
15 as they charge for paid downloads. Can we just see
16 that? It is in Holt 3. Holt 3 is in {C2/10/142},
17 if you just look at the second and third columns.
18 We see under "Commission for paid download", the
19 commissions they have for the paid downloads,
20 looking at the big ones, Steam, Epic, Microsoft,
21 Nintendo and then we look at the commissions for
22 in-app purchases, we see they are the same.

23 Since we are here, we also note what Mr Holt
24 tells us about whether the in-app, what he calls
25 aftermarket services are tied, tied on his approach.

1 We see that for Steam, Microsoft Store for games,
2 which we know is the big money maker, Microsoft
3 Store, X-Box games, PlayStation, Nintendo, they are
4 all tied, even on his approach. No distinction is
5 made. The big platforms also require developers to
6 use the marketplace's payment system. So the idea
7 of a separate market for in-app transactions is
8 artificial, we say. It is not reflected in reality
9 at all.

10 The next point that Dr Kent makes is that Apple
11 is no longer match making users and developers once
12 the app has been downloaded. They say that once the
13 app has been downloaded, we are no longer match
14 making developers and users, the so-called
15 aftermarket becomes a one-sided market. Again, we
16 say that completely mischaracterises what Apple is
17 doing. The match making role obviously covers the
18 initial download and the in-app transactions made
19 possible by the download. The App Store encourages
20 the latter, the in-app transactions, as much as the
21 former, the download of the app as well. Because
22 when, not least because when App Store consumers are
23 browsing, the App Store tells them whether the apps
24 offer in-app transactions and it tells them the
25 prices of the particular in-app transactions. So

1 the user knows what they are getting before they
2 download the app. That is required by the app
3 guidelines, by the app review guidelines.

4 If there is any dispute about that -- in fact,
5 I will show you, if I may, very briefly, just an
6 example of it because it is {D2/99.1/1}. Here you
7 see Good Food Recipe Finder, it used to be BBC Good
8 Food. Five lines down, you see that the download is
9 free but it offers in-app purchases. So the browser
10 sees this and asks, "Well okay, but what will I be
11 paying for the in-app purchases?" So they scroll
12 down, which they can do before downloading the app.
13 This is a preview. So page 3 please. On the bottom
14 right-hand corner you see that the in-app purchases
15 prices are listed there. IOS Device Users can even
16 initiate an in-app purchase directly from the App
17 Store where the developer has chosen to give them
18 that option. I will just give you the reference for
19 that, there is no need to go to it, {D1/1753/1}.

20 CHAIRMAN: Sorry Mr Kennelly, I do not want to take you
21 out of course, but I am not sure I understand the
22 point. Are you saying they can initiate the app
23 purchase at the time they download, is that the
24 point?

25 MR KENNELLY: No, sir, they are two different things. I

1 will slow down. Here I am making the point that
2 when you are scrolling through the app to see will I
3 buy the app or not, you can see that it offers
4 in-app purchases and what it will cost you. There
5 is a separate option. Can we pull up please
6 {D1/1753}. Can we zoom in please? This is an
7 option the developers are given, where directly in
8 the App Store you can click on "In-app purchase".
9 So it is possible to do it directly on the App
10 Store. You do not have to download the app and then
11 do it, you can do it immediately.

12 THE CHAIRMAN: So you can actually jump --

13 MR KENNELLY: Straight to the in-app purchase, yes.

14 THE CHAIRMAN: At the same time, so this is before you
15 have downloaded the app?

16 MR KENNELLY: It is at the same time.

17 THE CHAIRMAN: So you are effectively consolidating step
18 1 and step 2?

19 MR KENNELLY: Yes, I will be corrected if that is not how
20 it works.

21 THE CHAIRMAN: It would be helpful I think -- it is
22 something we can ask.

23 MR KENNELLY: That is how I understand it.

24 THE CHAIRMAN: It may be that it will come out.

25 MR KENNELLY: Certainly the in-app purchase can be done

1 immediately, that is an option the developers are
2 allowed to provide and it is provided extensively in
3 the App Store.

4 So this distinction between matchmaking at the
5 download stage and matchmaking at the in-app
6 purchasing stage just does not reflect how the App
7 Store works at all.

8 The next point Dr Kent makes about, and this is
9 the final point, different business models. Dr Kent
10 says there are different business models offered to
11 developers and that shows that the distribution of
12 iOS Apps is distinct from transactions within the
13 iOS Apps. Of course we say, and you have this
14 already by now, that that fact supports our market
15 definition. My learned friend, Mr Hoskins, said
16 what matters is not the genre of app but the manner
17 in which it is distributed. Here we see the
18 different ways in which app content is distributed
19 and monetised because the availability of these
20 business models, in-app purchases, monetisation
21 through advertising and so forth means that
22 transactions for apps and transactions for in-app
23 content are substitutes for each other. A developer
24 can choose the premium model and earn its revenues
25 through IAP or advertising and developers can chop

1 and change, they can mix these transaction types to
2 monetise their digital goods and services.

3 THE CHAIRMAN: Are you going to come and talk about
4 Professor Hitt's analysis of games and videos, or
5 have we done a bit of that?

6 MR KENNELLY: No, I think we will come back to that.

7 THE CHAIRMAN: Ms Demetriou explained that to us, but
8 just on that point just so I am clear, that is all
9 part of a piece, is it not? As I understand it, you
10 are saying that if a developer is unhappy and wishes
11 to switch, one of the substitutes open to them and
12 you are saying one of the substitutes is to go to
13 another platform.

14 MR KENNELLY: Yes.

15 THE CHAIRMAN: Obviously, Ms Demetriou explained how that
16 might work and we have got when you get into video
17 games and video distribution, as I understand it,
18 you are advancing those as particular examples where
19 there is greater latitude, if you like, to
20 developers to substitute --

21 MR KENNELLY: Yes.

22 THE CHAIRMAN: -- because of the nature of the users'
23 requirements.

24 MR KENNELLY: Yes.

25 THE CHAIRMAN: So for example in relation to games,

1 because they might multidevice, let alone
2 multiplatform, but there are more options open as
3 substitutes for just paying the Commission.
4 Similarly here, you are saying it is a substitute
5 for the just paying the Commission to decide to go
6 off to somebody and get some ads, go to Google
7 adtech and get some ads to pop on to their app.

8 MR KENNELLY: Indeed.

9 THE CHAIRMAN: That is another switching opportunity, if
10 you like, away from paying the Commission. Is that
11 right?

12 MR KENNELLY: Yes, for developers. These all operate as
13 constraints on Apple, because Apple obviously is
14 well aware of the fact that developers, and we are
15 looking at developers here, can monetise in
16 different ways and they will do so if Apple is not
17 offering a competitive price.

18 MR FRAZER: Just on that point, do we have any data, just
19 remind me, to show that these different business
20 models are actually equivalent? For example, if we
21 had a developer who wished to move away from in-app
22 purchases or paid for apps or one of the premium, et
23 cetera, they could entirely substitute the business
24 model for an advertising model, that would, as it
25 were, be a very reasonable substitute for them in

1 terms of the finances involved?

2 MR KENNELLY: Yes. In the time available, because I need
3 to hand over to Ms Demetriou now, but there is data
4 and evidence that goes to that point and we will
5 give you the references in the course of the day.
6 In fact, we see it playing out in realtime. There
7 is strong evidence of the benefits of using
8 advertising as a monetization strategy and that is
9 done very successfully by many app developers on the
10 App Store that pay almost nothing to Apple, and we
11 also see, for example, developers taking advantage
12 of in-app purchases. When in-app purchasing was
13 introduced in 2009, lots of developers that were
14 charging people to download stopped doing that and
15 then switched to in-app purchasing as a different
16 way of monetising their content.

17 MR FRAZER: It is just that when you showed us those very
18 impressive figures about the very high concentration
19 involved for developers in relation to the total
20 commissions, the thought that occurred to me was
21 whether that vast amount of money, as it were, of
22 the monetisation, could be entirely substituted
23 through advertising, or if there were some
24 constraints in the advertising charges that would
25 prevent that as a perfect substitute.

1 MR KENNELLY: We will show you that and, in fact, you
2 will see the extent to which advertising is used by
3 the most successful genre of app developers, which
4 is the games developers.

5 At this stage, I think I need to hand over to
6 Ms Demetriou.

7 Submissions by MS DEMETRIOU

8 MS DEMETRIOU: Thank you. I am moving on to the
9 exclusive dealing allegation and as I foreshadowed
10 at the outset we have four responses to Dr Kent's
11 allegation. The first is that the restrictions of
12 which she complains, so Apple's integrated and
13 centralised system are how Apple competes on the
14 merits and competition on the merits is not abusive.

15 The second point is that we are within the
16 *Magill* line of cases because the counterfactual to
17 the alleged abuse is that Apple would be required
18 compulsorily to licence its technology. The
19 exceptional circumstances in which competition law
20 mandates this are not even pleaded by Dr Kent. She
21 does not advance a case on that.

22 Thirdly, we say that Dr Kent has failed to show
23 that in the counterfactual there would be
24 appreciably more competition. Fourthly, we rely on
25 objective justification.

1 Now, starting with competition on the merits, I
2 am going to take that point first, it is common
3 ground that in order to establish an abuse, a Class
4 Representative must show that the conduct complained
5 of was based on the use of means other than those
6 which come within the scope of competition on the
7 merits. We see that without turning it up in the
8 Class Representative's skeleton argument at
9 paragraph 91. Can we look very briefly at the *Ede &*
10 *Ravenscroft* case which is in the bundle at {AB3/48}
11 and if we go to page 26, please. Perhaps we can go
12 to the previous page just to locate this passage.

13 This is a passage where the Tribunal is setting
14 out some general principles and if we look at the
15 bottom of this page, so subparagraph 5, and then go
16 over the page, please. At (iii), so:

17 "Conduct that does not come within the concept
18 of 'competition on the merits' is (without claiming
19 to be exhaustive) generally characterised by the
20 fact that it is not based on obvious economic or
21 objective reasons. Where, therefore, there is no
22 justification for the conduct other than to harm
23 competitors, that conduct will necessarily not come
24 within the scope of competition on the merits."

25 Then we see at (iv):

1 "'Competition on the merits' refers, generally,
2 to a competitive situation in which consumers
3 benefit from lower prices, better quality and a
4 wider choice of new or improved goods or services."

5 Then just to encapsulate our submission and
6 picking up on the language of (iii) that I just took
7 you to, Apple's requirements are based on an obvious
8 economic or objective reason and that is because its
9 product is an integrated tech product in which Apple
10 competes on several markets, including devices
11 markets and transaction markets, and the
12 requirements which are the requirements of which
13 Dr Kent complains are the reason why it is an
14 integrated product. We say that customers,
15 consumers, value the fact that it has been
16 integrated and Mr Kennelly has developed some of the
17 reasons why customers value that.

18 THE CHAIRMAN: Could I just ask you a quick question?

19 You are not suggesting, are you, that because you
20 have ticked the box in (iii) that is the end of it,
21 are you? Because (iii) is all about indicia that it
22 might not be competition on the merits, is it not?

23 MS DEMETRIOU: No.

24 THE CHAIRMAN: You are saying that, at least as far as
25 that goes, we should not worry about that because

1 there is an objective justification but then of
2 course you have to go on and deal with the broader
3 point in (iv) as well?

4 MS DEMETRIOU: Well I think that's right, I do emphasise
5 the words "generally characterised", so conduct that
6 does not come within it, within the concept of
7 competition on the merits, and again it says this is
8 not exhaustive, but it is generally characterised by
9 the fact it is not based on obvious economic or
10 objective reasons, and we say that this is. So
11 generally, you are looking at conduct which has no
12 objective reason that relates to quality or price or
13 any of those parameters.

14 THE CHAIRMAN: I do not think it is saying that, is it?
15 Is it not saying that you can generally determine
16 that something is not competition on the merits if
17 you cannot find any obvious economic objective
18 reason.

19 MS DEMETRIOU: Yes.

20 THE CHAIRMAN: That is quite different from saying if you
21 have got an objective economic obvious reason it is
22 likely to be competition.

23 MS DEMETRIOU: I think they are very closely related. So
24 I am not saying that if there is an objective reason
25 then in all cases it is generally competition on the

1 merits, but what we see here is they say without
2 claiming to be exhaustive, generally speaking, what
3 you are looking for when you are trying to identify
4 conduct which is not competition on the merits, is
5 conduct which does not have an objective reason
6 because it is all about harming your competitors.
7 So that is really the touchstone.

8 So what we say here is that the way in which
9 Apple competes both on the devices market and the
10 transactions market, so the way it marks itself out,
11 is by offering an integrated platform which is
12 valued by consumers, including for the better
13 privacy and security and including because of its
14 better performance and its streamlined nature. That
15 is how it competes, and you saw the advertising and
16 promotional material that Mr Kennelly took you to.
17 So there is clearly an objective, an economic
18 reason, for the requirements. The requirements are
19 the means by which Apple achieves its competitive
20 offering which is the way it distinguishes itself.

21 Now, pausing here, on Dr Kent's case, this is
22 completely irrelevant. So on Dr Kent's case, she
23 leaves no room in the way that she frames her case
24 for this important issue to be taken into account
25 and the important issue being that the very means by

1 which Apple distinguishes itself, the parameter, a
2 key parameter, is accomplished through the
3 requirements of which Dr Kent complains. She leaves
4 no room for that in her analysis, because when we
5 say the requirements are how Apple competes on the
6 merits, Mr Hoskins' response, you heard the day
7 before yesterday, was to say, "Ah well, no, that
8 does not count because that is competition on the
9 devices market, which is the wrong market to be
10 looking at." That was his answer to our point. Our
11 short answer to that submission is to say that it is
12 both. Apple competes by offering an integrated
13 platform through the requirements on both devices
14 and transaction markets. Of course it is both. The
15 device is an integrated product of which the store
16 is a part. The privacy and security that Apple
17 provides through its integrated approach makes the
18 device more attractive but it also makes end users
19 more willing to transact through the App Store, as
20 compared with alternative platforms. But even if it
21 were just the devices market, which it is not, that
22 would be sufficient for our argument.

23 Now, Mr Hoskins then said, "Well, because it is
24 the wrong market, this point needs to be dealt with
25 under objective justification instead." So that was

1 his initial home for this argument. But when he got
2 to objective justification, he said "Well, you
3 cannot take account of the point there either
4 because the market's been defined narrowly and
5 because Apple has 100 per cent of that market.
6 There cannot be any objective justification at all."

7 So on Dr Kent's approach, all questions of
8 privacy and security and the integrated nature of
9 the product which is, as I say, a key way in which
10 Apple competes and differentiates itself from its
11 competitors, are irrelevant. The upshot seems to be
12 that an integrated approach is just inherently
13 unlawful, no matter how much consumers benefit from
14 it and no matter how many other approaches are
15 available to them in the devices market or how many
16 alternative means of transacting are available in
17 the transactions market. We say that that position
18 is entirely unreal.

19 My learned friend is asking the Tribunal to
20 determine the allegation that Dr Kent makes,
21 shutting its eyes to the critical point that the
22 requirements she attacks are the means through which
23 Apple produces a product which is differentiated
24 from its competitors and which consumers value.

25 THE CHAIRMAN: Is that really just a function of the

1 outcome of the market definition exercise? Because
2 you could say that once you have reached the
3 conclusion about market definition and dominance,
4 then actually that makes perfect sense because you
5 really are then looking at the impact on a
6 particular set of users and both sides of the market
7 and the impact on them. So actually you have
8 already decided that question. You have decided
9 that is not the focus of the enquiry.

10 MS DEMETRIOU: Well, sir, we say that this argument
11 succeeds even if we are wrong on market definition
12 and dominance. So this is not dependent on our
13 position on market definition and dominance, so even
14 if Dr Kent is right on market definition and Apple
15 is dominant on the narrow markets that she alleges,
16 the fact remains that the requirements are not
17 requirements -- the basis for them is not to harm
18 consumers. There is an objective and economic
19 reason. It is, they are the very means through
20 which Apple differentiates itself, both on devices
21 and transaction markets.

22 Really, one can contrast Apple's offering with
23 that of Google's Android operating system, which is
24 the most prevalent mobile operating system globally
25 by a significant margin, because of course, as the

1 Tribunal has seen, unlike iOS, Android is licensed
2 separately to run on devices manufactured by others
3 and Google also permits third party app stores,
4 which manufacturers like Samsung often pre-install
5 on devices alongside the Google Play Store. Android
6 devices also allow downloads from other sources too,
7 such as developer websites. As we have pointed out
8 in our skeleton argument, without turning it up, it
9 is paragraph 17, Google itself acknowledges that its
10 open system makes it more vulnerable, more
11 susceptible to malicious attacks and that is because
12 it has far less control over the quality of the apps
13 on Android and even its own PlayStation applies less
14 detailed and demanding app review than Apple.

15 But in striking the balance differently to
16 Apple, Google's reward is to be the most prevalent
17 operating system globally by a significant margin
18 and the Google Play Store has about twice as many
19 apps as the App Store. So these are choices that
20 the manufacturers, that the two companies, make
21 about how they are going to compete. Apple's one
22 stop shop is, accordingly, a major part of how it
23 competes and what marks it out and makes it
24 different to other technology platforms such as
25 Google's. As I say, the means through which it

1 achieves this is through the very restrictions
2 complained about by Dr Kent. They are, accordingly,
3 an economic choice, they do have an objective
4 reason.

5 I would also add this. That this is not an
6 unusual choice for an economic undertaking to make
7 about the way it competes. It is precisely the same
8 choice, thinking about a game developer, so an app
9 developer of a successful game also faces a choice.
10 Do they use their IP rights to reserve to themselves
11 the commercial activities within the game, so
12 selling weapons or different clothing and so on? Do
13 they do that? Do they use their IP rights to
14 reserve that activity? No doubt that would have
15 benefits such as conserving the integrity of the
16 game, its uniformity, its security and so on. Or,
17 on the other hand, do they choose to allow third
18 parties in to also offer commercial products on the
19 game and charge them a commission for their
20 activities in return for licensing their IP rights
21 and allowing them on to their game? So it is a
22 trade-off in each case. So you get the Commission,
23 if you open it up, but then you lose other things in
24 terms of the parameters of how you compete. Some
25 game developers do things one way and others do it

1 the other way. There is a mix of different
2 approaches.

3 THE CHAIRMAN: I am not sure I know enough about games to
4 fully comprehend that. Are you suggesting that
5 there are these commercial deals that monetise other
6 interests?

7 MS DEMETRIOU: Absolutely. So for example, you have
8 presumably heard of Minecraft, sir?

9 THE CHAIRMAN: I have observed my son playing it but that
10 is about the extent of the expertise.

11 MS DEMETRIOU: Microsoft is the developer of Minecraft
12 and then you have Roblox, which is another major app
13 developer for games. What they do is that they have
14 chosen to allow third parties in. So if you play on
15 one of these games then there are commercial third
16 parties that monetise the activity and they are
17 charged a commission for doing that. Whereas there
18 are other game developers that choose not to do that
19 and they keep it all in-house. That is just a
20 commercial choice.

21 You do not say, "Oh well the ones that decide
22 to not licence their IP and keep the activity
23 in-house, they are abusing their dominant position
24 by exclusive dealing." It is really nonsensical.
25 It is the same point. That is how they compete on

1 the merits.

2 You can actually see the same dilemma in the
3 original decision that Apple made about allowing
4 third party apps in the first place. Mr Kennelly
5 yesterday, you might recall, took you to part of the
6 launch event where that was discussed. As you know,
7 in 2007, Apple did not allow third party native apps
8 at all when it first launched the iPhone. That is
9 obviously an even more tightly controlled approach.
10 It is one we see in lots of electronic devices
11 actually where the only applications that run on the
12 device are ones that are preloaded by the
13 manufacturer.

14 In 2008, Apple took a step in the direction of
15 decentralisation by allowing third party apps but
16 only through Apple's central distribution including
17 app review, and in doing so it was striking that
18 careful balance which goes to the very heart of how
19 it competes.

20 So that is the way we put our first defence to
21 the allegation, which takes me on to the second
22 reason why Dr Kent's allegation of exclusive dealing
23 is incorrect. That is because although she seeks to
24 characterise this as an exclusive dealing case, it
25 is not actually an exclusive dealing case, because

1 exclusive dealing is where you have a number of
2 suppliers in a market and a dominant firm uses its
3 market power in that market to prevent customers
4 buying from other competing suppliers. The classic
5 case is *Hoffmann-La Roche*, which we have in the
6 bundle, and Mr Hoskins took you to for other
7 purposes. If we look at it briefly at {AB4/2/46}.
8 This is just the facts at the very beginning of the
9 judgment. You can see at paragraph 2 at the top of
10 the page, that the Commission had found Roche had a
11 dominant position on the markets for particular
12 vitamins and it had abused its dominant position by
13 obliging or incentivising its purchasers to buy all
14 or most of their requirements from it rather than
15 from Roche's competitors. They would inevitably
16 want to buy some from Roche given its dominance, and
17 the exclusive dealing leveraged that dominance to
18 create pressure for them to buy all or most of their
19 requirements. We say that there is a critical
20 distinction between *Hoffmann-La Roche* and the other
21 exclusive dealing cases, on the one hand, and the
22 present case on the other. Because in this case
23 Apple is not using its alleged dominance in
24 distribution to prevent developers from distributing
25 their apps through competitor platforms. It is

1 using its IP to reserve the distribution activity to
2 itself. I showed the Tribunal that when we looked
3 at the DPLA.

4 Now, Dr Kent's case, and when I took you to the
5 DPLA I showed you that Apple grants a limited
6 licence to its technology, it does not licence
7 developers to publish an app store, create an app
8 store, run an app store or payment activities. It
9 only licences its technology to developers to
10 publish iOS Apps that are distributed through the
11 App Store.

12 So Dr Kent's case is that Apple must licence
13 its intellectual property rights for activities that
14 it does not currently permit, and that really is a
15 critical point in this case. We say that it is of
16 the very essence of an intellectual property right
17 that the owner of that right can decide whether or
18 not to licence it. The very purpose of the
19 intellectual property right is to permit the holder
20 to reserve a particular activity to itself, or
21 indeed to determine the extent to which others can
22 use its IP right. That is why intellectual property
23 rights are granted. They recognise, and this is
24 trite and I know the Tribunal knows this, but they
25 recognise the investment that has been dedicated by

1 the firm in question and they protect that
2 investment so as to incentivise innovation, that is
3 the deal.

4 For that reason, competition law will only
5 intervene very exceptionally so as to require
6 mandatory licensing of technology protected by
7 intellectual property rights.

8 Now, sir, what I want to do is take the
9 Tribunal back to the principal authorities that
10 Mr Hoskins took you to, explain, and I am going to
11 explain how we put our case in light of the case
12 law, and I will respond to points Mr Hoskins made as
13 I go along.

14 Can I start please with *Magill*. So {AB4/9/65}
15 is the start of the judgment. You will recall the
16 facts that *Magill* sought TV listings information
17 from the main TV channels so that it could produce a
18 combined TV listings magazine. The listings were
19 protected by copyright.

20 Pausing here, can I just make this point. That
21 obviously the intellectual property rights in
22 *Magill*, copyright in their TV listings, was very far
23 removed in terms of importance compared to the IP
24 that we are considering in the present case, which
25 protects swathes of innovative technology that Apple

1 has developed through very considerable investment.
2 So both in terms of scope and investment, we are a
3 much stronger case than *Magill*.

4 I want to look at paragraph 9 of the judgment.
5 Looking at paragraph 9, you can see that the TV
6 *stations*:

7 "Practiced the following policy with regard to
8 the dissemination of programme listings. They
9 provided their programme schedules free of charge,
10 on request, to daily and periodical newspapers,
11 accompanied by a licence for which no charge was
12 made, setting out the conditions under which that
13 information could be reproduced. Daily listings
14 and, if the following day was a public holiday, the
15 listings for two days, could thus be published in
16 the press, subject to certain conditions relating to
17 the format of the publication."

18 And they ensured strict compliance with these
19 conditions.

20 Pausing here, you can see that the broadcasters
21 did grant a licence to their programme listings, but
22 it was a limited licence. So it did not allow
23 *Magill* to do what *Magill* wanted to do, which was to
24 publish a combined listing. We draw an immediate
25 analogy with what Apple does in this case because

1 Apple also, as I showed you under the DPLA, grants a
2 limited licence to its IP to developers. It is
3 limited in scope and ambit, just as the licence to
4 the TV stations was limited in scope and ambit.

5 Pausing here again, you will recall that
6 Mr Hoskins' argument is that once an IP owner
7 decides to licence its rights to any extent, it is
8 game over for the *Magill* conditions. But we can see
9 on the very facts of *Magill* that that is not so,
10 because the TV stations did indeed grant a limited
11 licence.

12 Now I just want to take you to a couple more
13 points in the judgment. If we can go on to page 72,
14 {AB4/9/72}. I just want to note that at paragraph
15 46 in passing, I am going to come back to this
16 point, but the mere ownership, of course, of an
17 intellectual property right cannot confer a dominant
18 position, but we see from paragraph 47 that
19 nonetheless the TV stations did have a dominant
20 position in the markets for the provision of the TV
21 listing information. You can see that they had a,
22 by force of circumstance, they had a de facto
23 monopoly.

24 Then if we go, please, to paragraph 48 over the
25 page, the court said there that it is not the case

1 that the exercise of intellectual property rights
2 could never be reviewed under competition law, but
3 then 49 and taking it from the second sentence:

4 "... the exclusive right of reproduction forms
5 part of the author's rights so that refusal to grant
6 a licence, even if it is the act of an undertaking
7 holding a dominant position, cannot in itself
8 constitute abuse of a dominant position."

9 So that is the important starting point. Do
10 not forget here, sorry to emphasise this again, but
11 they are not talking about a refusal at all, because
12 there was a limited licence. They are talking about
13 a refusal of a licence of the scope and ambit that
14 *Magill* wanted.

15 Then if we go to the next paragraph:

16 "However, it is also clear from that judgment
17 that the exercise of an exclusive right by the
18 proprietor may, in exceptional circumstances" -- we
19 emphasise those words -- "involve abusive conduct."

20 The court then went on to outline what those
21 circumstances were. The first point before you get
22 to the conditions, and we have seen the first point,
23 is that they have to be dominant on the relevant
24 market for their IP rights, that was established.
25 The second point we see at paragraph 53, if we could

1 scroll, please. That is the point about
2 indispensability. You see that what the court is
3 saying here is that access to the information on
4 programme scheduling was indispensable for *Magill* to
5 carry out the activity in question that it wanted to
6 carry out. The position, pausing here, is that if
7 the firm is dominant on markets where its products
8 are protected by IP rights and access to those
9 rights is indispensable to carry out an activity on
10 a secondary market, then exceptionally, the firm may
11 be compelled to licence its intellectual property
12 rights if three conditions are met. So pausing
13 there, if the conditions are satisfied, they would
14 lead to the compulsory grant of a licence to conduct
15 activities in a different market from the market for
16 the product protected by the intellectual property
17 rights so a secondary market.

18 The court then explained the three conditions.
19 We see at paragraph 54 that the refusal to licence
20 the intellectual property prevented the appearance
21 of a new product. Paragraph 53 explains why because
22 *Magill* wanted to compile a weekly television guide
23 to all the channels, so back when there were just a
24 few channels in that time. At that time, some of us
25 might be able to remember, probably only a few of

1 us, you had to buy the Radio Times and the TV times
2 and different magazine for each of the channels. So
3 what they wanted to do was something that was new.

4 Then we see paragraph 55, there was no
5 justification for the refusal of the licensing of
6 the IP rights.

7 Then, at 56, the IPR holder reserved to itself
8 the secondary market by excluding all competition on
9 that market.

10 There are three conditions, but those three
11 conditions only arise if you are dominant on
12 relevant markets for the IP and if access to the IP
13 is indispensable to carry on the business. Then if
14 the three conditions are met, exceptionally a
15 compulsory licence will be mandated by competition
16 law. So that is *Magill*.

17 We see, I want to go back next to Bronner,
18 which is at {AB4/3}, which was not an IP case and
19 really, standing back, the difference is that the
20 analysis is the same, except that where it is not an
21 IP case you do not have the new product conditions.
22 So there is one fewer conditions that have to be
23 met. You will recall the facts. Media Print
24 published several newspapers and had established a
25 home delivery service. Oscar Bronner published a

1 rival national newspaper and the alleged abuse, we
2 can see this from page 26, {AB4/3/26} paragraph 8,
3 bottom of the page, was a refusal to allow Bronner
4 access to Media Print's home delivery service. You
5 see Bronner's argument at page 30, paragraph 24. So
6 Bronner's argument, in short, was that Media Print
7 was obliged under Article 102 to provide access to
8 its delivery service. You see at paragraph 26 over
9 the page, Media Print's argument. So Media Print
10 said that:

11 "In principle undertakings in a dominant
12 position are entitled to the freedom to arrange
13 their own affairs", in that they are normally
14 entitled to decide freely to whom they wish to offer
15 their services and referred to *Magill*, the
16 exceptional circumstances point.

17 Then the analysis of whether the conduct was
18 abusive starts on page 33 {AB4/3/33} at paragraph
19 37. You see there that the court says:

20 "It would need to be determined whether the
21 refusal by the owner of the only nationwide
22 home-delivery scheme ... to allow the publisher of a
23 rival daily newspaper access to it constitutes abuse
24 of a dominant position ... on the ground that such
25 refusal deprives that competitor of a means of

1 distribution judged essential for the sale of its
2 newspaper."

3 So essential for the sale of its newspaper, not
4 essential for selling a newspaper via a home
5 delivery service, essential to the sale of the
6 newspaper at all.

7 Then we see at paragraph 38 that the court
8 refers to *Commercial Solvents*, saying that:

9 Although in *COMMERCIAL SOLVENTS v E.C.*
10 *COMMISSION* the Court of Justice held that the
11 refusal by an undertaking holding a dominant
12 position in a given market ... to supply an
13 undertaking with which it was in competition in a
14 neighbouring market with raw materials and services,
15 which were indispensable to carrying on the rival's
16 business, to constitute an abuse, it should be
17 noted, first, that the court did so to the extent
18 that the conduct in question was likely to eliminate
19 all competition on the part of that undertaking."

20 Then we see the court referring back to *Magill*,
21 to the indispensability prior point before you get
22 to the three conditions at all. You see at
23 paragraph 41, at the bottom of the page, if we can
24 go over the page, that it is necessary to show,
25 "... not only that the refusal of the service be

1 likely to eliminate all competition in the daily
2 newspaper market and that such refusal would be
3 incapable of being objectively justified, but also
4 that the service itself be indispensable to carrying
5 on that person's business, in as much as there is no
6 actual or potential substitute for the home delivery
7 service."

8 In this case, before the court got on to the
9 three conditions, the claim failed at the threshold
10 indispensability criterion. In the next paragraphs
11 the court made clear that this threshold condition
12 is a difficult one to satisfy. You can see from
13 paragraphs 42 to 44 that the criterion of
14 indispensability was not satisfied here because even
15 if there is only one home delivery service and Media
16 Print was dominant, which were the facts, there were
17 other means of distributing newspapers and no
18 barriers to establishing Bronner establishing its
19 own home delivery service.

20 You see if you look at paragraphs 43 to 46, the
21 very high hurdles that you need to demonstrate, to
22 establish this indispensability condition. So you
23 can see at 45 that in order to demonstrate that the
24 creation of an alternative system is not realistic,
25 it is not enough to say that it is not economically

1 viable because we have got a small circulation. You
2 have to do more than that you can see that from
3 paragraph 46.

4 In the present case, just pausing here and
5 explaining why I am going to this authority,
6 licensing Apple's intellectual property rights,
7 without the limitations that Dr Kent complains
8 about, is not indispensable to carrying on the
9 business of app development or for carrying on the
10 business of an app distributor, because app
11 developers and app distributors clearly do carry on
12 business without the licence that Dr Kent says Apple
13 should be compelled to grant them. They do so on
14 other platforms. So just like Oscar Bronner, being
15 told it would have to sell its newspaper through
16 kiosk and regional distribution and could not sell a
17 nationally home-delivered newspaper.

18 Before leaving Oscar Bronner, can I just take
19 you to the Advocate General's position very briefly.
20 That is in the same tab, page 22 {AB4/3/22}. It is
21 paragraphs 62 and 63. I just want to take you to
22 those because we can see, can you just read 62 to
23 yourselves, please? That helps explain the
24 rationale.

25 THE CHAIRMAN: Do you want us to go to 63?

1 MS DEMETRIOU: Yes, and 63, thank you.

2 MR HOSKINS: I would ask you to read down to 64 while you
3 are at it, please. Thank you.

4 MS DEMETRIOU: So at 63 the Advocate General was
5 explaining why *Magill* was an exceptional case, such
6 that a compulsory licence was mandated. You can see
7 some of the reasons for that, that the product was
8 genuinely a new product that was being prevented by
9 the refusal to licence. Also, the provision of
10 copyright protection was difficult to justify. In
11 other words, it was quite thin IP so the decision
12 not to licence it was difficult to justify. Those
13 were points which the Advocate General considered
14 weighed heavily with the court and we would suggest
15 the same.

16 Then just picking up on one point, please, in
17 paragraph 64, we do emphasise the sentence in the
18 middle:

19 "If it is so required" -- so if the *Magill*
20 conditions are satisfied -- "the undertaking must
21 however in my view be fully compensated by allowing
22 it to allocate an ... an appropriate proportion of
23 its investment costs", so an appropriate return on
24 investment. So fully compensated.

25 The reason I am taking you to that is because

1 on Dr Kent's case, Dr Kent's case does not envisage
2 any compensation at all for Apple for its IP rights.
3 Nothing. Has not addressed that point.

4 I want to take you now to *IMS Health* at
5 {AB4/12/30}. Can we start at page 30, paragraph 4.
6 I just want to look at the facts. IMS provided data
7 on regional sales of pharmaceutical products in
8 Germany to laboratories, and they were formatted
9 according to a particular specific brick structure,
10 which is referred to as the 1,860 brick structure.
11 You can see at paragraph 10, on the next page, that
12 the brick structure was protected by copyright and
13 IMS refused to authorise NDC to use it. Pausing
14 here, while IMS refused to authorise NDC to use it,
15 other undertakings did use -- IMS did authorise
16 other undertakings to use the 1,860 brick structure.
17 We can see this if we can quickly flip to the
18 Commission decision, which is at tab 10.1, and the
19 Commission, in its decision, initially required IMS
20 to provide a licence to NDC and this was then
21 annulled. If we go to {AB4/12/5} page 5 of the
22 Commission decision and look at recitals 24 to 26,
23 you can see that the 1,860 brick structure was also
24 used by other companies without objection from IMS.
25 If we can go on to page 14 {AB4/12/14} of the

1 Commission decision and look at recital 104, you can
2 see that third-party software providers also
3 delivered products in the 1,860 brick structure, and
4 various software companies are named. So it is not
5 the case that IMS refused to licence its brick
6 structure at all. It did licence it to some
7 operators, but not to NDC.

8 THE CHAIRMAN: That is presumably, am I right in
9 thinking, because it is a pharma company, it did not
10 want the competing pharma distribution arrangements.

11 MS DEMETRIOU: IMS is not a pharma company.

12 THE CHAIRMAN: Health data.

13 MS DEMETRIOU: Yes, a health data company.

14 THE CHAIRMAN: It did not want a competing service to the
15 service it was providing but it is allowing other
16 people who did not compete to use the same
17 structure, is that right?

18 MS DEMETRIOU: I am not sure that is right, I am not sure
19 we can get that from the facts. Let us assume for a
20 moment that that's correct.

21 THE CHAIRMAN: That is how I had always understood the
22 case that they were effectively using this data and
23 monetising it through particular channels to
24 doctors, clinics, and they did not want other people
25 doing that in the same way.

1 MS DEMETRIOU: They certainly did not want NDC doing it.

2 I do not know if as, a general proposition, they did
3 not want anyone else doing it.

4 THE CHAIRMAN: There may have been other clinic
5 organisations that were getting the benefit of it.

6 MS DEMETRIOU: That's right. What we can see from this
7 is that a decision to licence a product for
8 particular purposes does not then, as Mr Hoskins was
9 seeking to suggest, take you out of the *Magill* case
10 law. It is the same point, a similar point to the
11 one that I sought to make on *Magill* paragraph 9, on
12 the facts.

13 If we go back to the judgment, tab 12, page 36
14 {AB4/12/36}, we see that NDC argued that the refusal
15 was a breach of Article 102. The court turned at
16 paragraph 31 to the circumstances in which the
17 refusal by an undertaking, in a dominant position,
18 which owns a copyright of an indispensable product,
19 that the circumstances in which it is mandated to
20 grant a licence. You can see at paragraphs 34 to
21 35, if we can scroll, we see now the familiar law.
22 So refusal to grant a licence by an undertaking in a
23 dominant position not in itself an abuse; 35
24 exceptional circumstances. The court then refers
25 back to *Magill* and if we go over the page and look

1 at paragraph 38, so 38:

2 "It is clear from that case law that, in order
3 for the refusal by an undertaking which owns a
4 copyright to give access to a product or service
5 indispensable for carrying on a particular business
6 to be treated as abusive, it is sufficient that
7 three cumulative conditions be satisfied, namely
8 that the refusal is preventing the emergence of a
9 new product for which there is a potential consumer
10 demand and that it is unjustified and such as to
11 exclude any competition on a secondary market."

12 Again to reiterate, you have to show dominance
13 in a market in which the IP rights are protected,
14 then you have to show that access to the IP is
15 indispensable for carrying out an activity on a
16 secondary market, and then you have to show that
17 these three conditions are satisfied.

18 On paragraph 39, you see the court turned to
19 the first condition, and you see if we skip to
20 paragraph 49, this relates to the new product
21 requirement and what the court says here is that it
22 is not a new product where the undertaking seeking
23 the licence is essentially duplicating the goods or
24 services already offered on the secondary market by
25 the owner of the copyright.

1 You will remember what I showed you in the AG's
2 opinion of *Bronner* where he said *Magill* was not such
3 a case because it was genuinely a new product that
4 was not being offered on the market. Then you see
5 at paragraph 50 on the new product point:

6 "It is for the National Court to determine
7 whether such is the case in the dispute in the main
8 proceedings."

9 And of course it is referred back to the
10 national court because it is a question of fact.

11 Then 51 you see the second condition, relating
12 to whether the refusal was unjustified and then if
13 we skip down you see the operative part of the
14 judgment at page 40, and you see it is as I have
15 just explained. So that is in the operative part.

16 I now want to take you to *Slovak Telekom*, which
17 was the judgment relied on by my learned friend.
18 That is at tab 26.1 of the same bundle.

19 THE CHAIRMAN: Is that a convenient point to take a
20 break?

21 MS DEMETRIOU: It is.

22 THE CHAIRMAN: We will take ten minutes.

23 (11.46 am)

24 (Break)

25 (11.57 am)

1 MS DEMETRIOU: I want to take the Tribunal to Slovak
2 Telekom, which is at {AB4/26.1/13} and I want to go
3 to page 13. Can we put page 13 and 14 up
4 side-by-side. Mr Hoskins took the Tribunal to
5 paragraphs 49 and 50. Can I just ask you to read
6 those to yourselves, remind yourselves what they
7 say. Mr Hoskins' submission was that this is a
8 paragraph 50 case, and we say that he is wrong about
9 that, that the present case, in our submission, is a
10 paragraph 49 case. *Slovak Telekom* is different to
11 the present case because there was in *Slovak Telekom*
12 no question about the scope or ambit of the access
13 that *Slovak Telekom* should provide. We can see this
14 if we look at page 15, please, paragraph 54. You
15 can see from paragraph 54 that there was a
16 regulatory decision that set out exactly how much
17 access *Slovak Telekom* had to provide to its
18 infrastructure, so that question was off the table.
19 The issue was whether, having granted that amount of
20 access, *Slovak Telekom* was acting abusively in
21 charging excessive prices giving rise to a margin
22 squeeze.

23 By contrast, the present case is about the
24 scope or ambit of the access Apple is giving to its
25 intellectual property. Take for example a

1 competitor app store, a competitor app store would
2 need a licence from Apple to operate a competitor
3 app store and Apple refuses to grant such licences.
4 Apple has reserved that distribution activity to
5 itself, as Mediaprint did, as IMS did. Take app
6 developers, Apple has granted them a limited licence
7 to its intellectual property. The scope of the
8 licence is limited because it states that they can
9 publish iOS Apps for distribution through the App
10 Store and with any in-app transactions dealt with
11 through IAP. That is a limitation on the ambit of
12 the access granted by Apple.

13 So we say that the present case is just like
14 *Magill* and *IMS*. In each of those cases the property
15 owner did allow limited access to its property. The
16 Class Representative in each of those cases said
17 that those limitations should be lifted and the
18 court held that this would be compelling a property
19 owner to give access to its property in
20 circumstances where it chose not to do so, and that
21 competition law only imposes such a requirement
22 under exceptional circumstances.

23 That is what we say about *Slovak Telekom*. We
24 are a paragraph 49 case.

25 My learned friend also relied on the Advocate

1 General's opinion in *Android Auto* and can we pick
2 that up at tab 34.1 {AB4/34.1}. I want to make a
3 similar point in relation to this. If we go to page
4 6 {AB4/34.1/6}, paragraph 35 of the opinion, we can
5 see that she, first of all, talks about the *Bronner*
6 conditions and she says:

7 "By contrast those conditions are not intended
8 to apply where the infrastructure concerned is open
9 to other operators on the market, which according to
10 the court can result from the application of
11 regulatory obligations as was the case in the
12 judgment in *Slovak Telekom*."

13 Arguably, that must be a fortiori in this case
14 because it is deliberately developed to be used by
15 third-party operators.

16 So I want to emphasise the words "open to other
17 operators on the market". Now, Apple has never
18 opened the use of its infrastructure to other
19 undertakings in either of Dr Kent's alleged markets,
20 not distribution nor payment. It has reserved to
21 itself those markets, those activities, the
22 infrastructure to carry out those activities.

23 Then if we go to page 7, paragraph 44
24 {AB4/34.1/7}, we see here that the Advocate General
25 says:

1 "Of course, it could be argued that the absence
2 of a specific template ensuring the interoperability
3 of *Android Auto* with electric car charging apps, as
4 is the case here, demonstrates Google's wish to
5 reserve those services to itself."

6 So she is there recognising that if Google
7 could establish that it was intending to reserve a
8 particular activity to itself, *Magill* and *Bronner*
9 would apply. She says she is recognising that that
10 argument would be a well founded argument, and so
11 she is recognising even though the *Android Auto* app
12 was available freely to developers, as she said
13 several times in the opinion, so even though the
14 app, the car app, was intended, the very aim of it
15 was to attract lots of developers to have lots of
16 different apps on the platform, she said if Google
17 could argue, in principle, that it wanted to reserve
18 to itself the function of electric car charging
19 apps. So that would be something that was open to
20 Google, but she says that is not a persuasive
21 argument on the facts, and she says it is not a
22 persuasive argument on the facts and also Google has
23 not even raised it, it is focused on other
24 arguments.

25 So this is consistent with Apple's case.

1 Standing back, *Android Auto* is about whether or not
2 an additional app should be allowed on to the
3 platform in circumstances where Google had no
4 intention of charging for access to the platform or
5 for reserving the function carried out by this type
6 of act to itself. Whereas Dr Kent's complaint is
7 that Apple does not permit alternative app stores
8 and payment processes at all, that is her very
9 complaint. Her complaint is Apple reserved that to
10 itself and it must stop reserving it to itself.
11 That is squarely a *Magill* case.

12 The short point to make now is, I have
13 explained why we say that Mr Hoskins' attempts to
14 distinguish the *Magill* line of cases does not work.
15 So it follows that for Dr Kent to succeed at all in
16 her allegation, she would need to prove that this is
17 a case in which competition law exceptionally steps
18 in, so as to require Apple to licence its IPR on
19 terms it does not choose, so to give licences where
20 it chooses not to licence. But she has pleaded no
21 such case.

22 We have seen Apple's defence. Let me take you
23 to {A1/2/28}, paragraph 101(d).

24 THE CHAIRMAN: Just before you do that, I suggested to

25 Mr Hoskins that *Google Shopping* might be useful. I

1 do not know whether you think it is useful. I had a
2 quick look and I thought it was quite useful, but it
3 may be you do not feel you need to deal with it now.

4 MS DEMETRIOU: Sir, we say that this is a different case
5 to *Google Shopping*. Can I, in a nutshell, just
6 because of time tell you what our submissions are?

7 THE CHAIRMAN: Yes.

8 MS DEMETRIOU: Obviously we now have the Court of Justice
9 judgment and what the Court of Justice says in its
10 judgment, it makes here -- the issue, as you will
11 recall, is that Google applied various algorithms,
12 such that a comparator shopping services were
13 disadvantaged as compared to its own service on its
14 results page. There was also in that case a
15 question about access to the blue boxes, which only
16 *Google Shopping* service had access to. The court in
17 *Google Shopping* accepted that there was no question
18 that Google would have to provide access to the blue
19 boxes. That was off the table because that was its
20 own technology. So that was not even part of the
21 argument.

22 THE CHAIRMAN: So no question in the sense that --

23 MS DEMETRIOU: Did not have to. So the question then
24 was, they had granted access to the general results
25 page and the question was, was it abusive to

1 self-preference to have this algorithm which
2 disadvantaged. Google sought to argue that is all
3 about *Magill* and you have to show the exceptional
4 circumstances, but that clearly is a *Slovak Telekom*
5 case, because there was no question about ambit of
6 the access. They were on, the licence was there.
7 In fact, it was not an IP case, but the point
8 remains the same. So they were on, they had access.
9 No issue about ambit of the licence. The question
10 was the conditions that were to be applied, so
11 that's what we say about *Google Shopping*. We can
12 explain that in more granular detail in our closing
13 but that is in a nutshell the point.

14 THE CHAIRMAN: Thank you very much.

15 MS DEMETRIOU: Going to our pleading, just to remind you
16 what we have pleaded, {A1/2/28}, so it is further up
17 the page, paragraph 101(d). We put the point
18 squarely in issue:

19 "Save in limited circumstances ... not
20 anticompetitive for a dominant undertaking to impose
21 limits on the use of its intellectual property."

22 We have clearly stated the proposition there.

23 The Class Representative's reply to this
24 paragraph is at {A1 /3/16} and you can see it is at
25 the bottom of the page, "As to sub-paragraph (d)",

1 and if we look at this page and then over the page,
2 can I just ask the Tribunal to read to yourself what
3 they say. So it is effectively a bare denial. It
4 is unclear why it is vague and unparticularised
5 because we are just citing a proposition of law that
6 is from well-known case law. So there is,
7 accordingly, no pleaded case that the *Magill*
8 requirements are met. Now, I do not mean any
9 disrespect to him, but in a curious passage of his
10 submissions just before lunch on the first day,
11 Mr Hoskins in a few brief sentences sought to
12 suggest that even if *Magill* applied, the conditions
13 were met in this case. We say to that, it is not
14 pleaded, that there is nothing in their skeleton
15 argument about this, so we elaborated on this in our
16 skeleton argument -- our skeleton argument post
17 dated theirs to be fair, but there is nothing in
18 their skeleton argument, they are clear about what
19 the proposition is. And Dr Kent has not pleaded a
20 case that the *Magill* conditions are fulfilled.

21 They have not sought permission to advance an
22 alternative case that the conditions are met, nor
23 could they. That is simply not open to Dr Kent. It
24 is far too late because it depends upon a factual
25 analysis and the parties would need an opportunity

1 to file factual and expert evidence on the issues
2 arising.

3 Can I just explain why? It may be that this is
4 a non-issue because Mr Hoskins was not pressing it,
5 he did not apply for permission. But they would
6 have to show, if you were going to advance a case
7 like this, they would have to show that Apple is
8 dominant in properly defined markets in which
9 Apple's products are protected by its IPR. To take
10 that issue, because obviously if they could not show
11 that then Article 102 would not impose a condition
12 to licence at all.

13 Now, it may be when Mr Hoskins said blithely
14 "Oh, the conditions are met, and we can see that on
15 the remaining facts in this case", it may be that he
16 is assuming that since Dr Kent already alleges
17 dominance in iOS App distribution and payment
18 services markets that the analysis can just be
19 carried across. But that would not be right.
20 Because as the court held in *Magill*, mere ownership
21 of an IPR, of an intellectual property right, does
22 not confer a dominant position. Rather, as I took
23 you to the position in *Magill* at paragraph 47, the
24 court said by force of circumstance, RTE, and ITP as
25 the agent of ITV, enjoy, along with the BBC, a de

1 facto monopoly over the information used to compile
2 listings. So it was in the market for the supply of
3 information to compile listings that the TV stations
4 were dominant. In turn, *Magill* wanted to use that
5 information to provide a comprehensive TV guide in a
6 different market, what the courts have called in the
7 case law a secondary market.

8 So here the markets in which dominance would
9 need to be established are markets for the supply of
10 the technology and software and services that help a
11 developer to develop an app.

12 THE CHAIRMAN: So you are saying it is not, the right
13 market is not the transaction market, which is --
14 you are saying that actually it is the supply of the
15 tools, if you like?

16 MS DEMETRIOU: Exactly.

17 THE CHAIRMAN: Because that is the IP that is protected.

18 MS DEMETRIOU: Exactly so, so that would open up a whole
19 different sphere in the case. You can see the
20 point, if we go back, you can see it easily if you
21 go back to my example of the game developer so
22 Minecraft and so on. So the developers, take a
23 developer that is seeking to exercise the point I
24 put to the Tribunal earlier, exercise its IP rights
25 to reserve for itself the market for selling weapons

1 in a game. Somebody comes along and says, "Well
2 Article 102 requires you to licence us to sell
3 weapons in the game." Obviously, Article 102 would
4 require no such thing because the relevant question
5 is not whether the developer is dominant in
6 distribution of products for its game, the question
7 is whether it is dominant in relevant markets in
8 which it holds its IPR, such as markets for
9 supplying games. So you can see the point perhaps
10 more vividly when you just change the facts
11 slightly.

12 The second point we make, and again it may be
13 that these points are theoretical because as I say
14 we are not facing a pleading, but the next point is
15 that the *Magill* condition relating to preventing a
16 new product on the market, now Mr Hoskins briefly in
17 his submissions indicated that this requirement
18 would be satisfied merely if he could establish that
19 it was likely that another app distributor would
20 enter the market and provide services on Apple's
21 platform. But as I have shown you in the case law,
22 to satisfy the requirement the other distributor
23 would have to be doing something new and different,
24 not simply replicating the distribution services
25 that Apple provides. If this had been pleaded, it

1 is a factual point, you can see that it was sent
2 back to the national court.

3 The third point I wish to highlight, this is
4 not an exhaustive list of points, but the third
5 point is that of course one of the *Magill* conditions
6 is that the refusal to licence is not justified by
7 objective considerations. Mr Hoskins, in his
8 submissions, sought to conflate this with the
9 question of objective justification that arises if
10 the *Magill* line of cases does not apply, so the
11 point Mr Kennelly is going to come on to. But it is
12 a different question, with respect, because here
13 Dr Kent would have to persuade the Tribunal that
14 Apple's refusal to licence its intellectual property
15 rights was not justified. In order to address that
16 point, Apple would want to consider adducing
17 evidence on its intellectual property rights, the
18 scope of interference with those rights, the
19 underlying investments and the chilling effect on
20 investment if Apple were required to licence it
21 compulsorily. Again this would be a highly fact
22 intensive exercise and it is not in the evidence
23 because it has not been pleaded by Dr Kent.

24 So we say that Dr Kent's case must stand or
25 fall on her argument that we are outside the *Magill*

1 line of cases, and for the reasons I have given she
2 is wrong about that.

3 Just briefly, before I turn on to the next line
4 of defence, you will recall that Mr Hoskins said on
5 Monday that we have not pleaded the argument in
6 relation to unfair pricing or the payment
7 allegation. Of course, in relation to unfair
8 pricing, the point does not arise, so we are not
9 running this point in relation to unfair pricing.
10 But we do take the point in relation to the payment
11 restriction, it is precisely the same argument, and
12 our skeleton argument deals with both together.

13 The short response to Mr Hoskins' point --

14 MR HOSKINS: I am sorry to interrupt, but there is an
15 issue in relation to this in the sense that after I
16 opened the case on Monday, we were sent a proposed
17 re-amended defence.

18 MS DEMETRIOU: I am going to deal with that.

19 MR HOSKINS: Thank you.

20 MS DEMETRIOU: So the short response to Mr Hoskins is
21 that there is no deficiency in our pleading. The
22 facts necessary to make the legal argument that
23 Apple has IP rights in the software necessary to
24 provide payment processing is pleaded and is common
25 ground, it is relied on positively by Dr Kent. We

1 have stated clearly the contention of law on which
2 we rely. I took you to that, the last sentence of
3 paragraph 101(d). So Mr Hoskins' argument is you
4 have got it there but you have not replicated the
5 contention of law further down in the pleading, and
6 as he says --

7 MR HOSKINS: I am sorry --

8 MS DEMETRIOU: Sorry, can I finish?

9 MR HOSKINS: No, because this is not fair. Because we
10 were sent the draft re-amendment. We were asked to
11 give an indication by 1 o'clock today whether we
12 consented or not. I can take away the suspense, we
13 will not be consenting to it. This is precisely the
14 sort of submissions and argument the Tribunal is
15 going to have to hear as to whether to allow that to
16 happen or not. It is really not fair and it is not
17 efficient to take it this way now, where it is just
18 we plough forward as if Apple does not have to make
19 the application.

20 THE CHAIRMAN: So Ms Demetriou, just so I know where we
21 are, the position seems to be that whether you need
22 to or not, which you may argue about, you want to
23 clarify the pleading in relation to payment
24 restrictions. Are you applying to amend?

25 MS DEMETRIOU: Well, our position is that -- I am

1 slightly scared that I am going to say something and
2 Mr Hoskins will jump up again, but if he will let me
3 just finish a couple of sentences.

4 Our primary position and we made this clear in
5 the letter, is that it is not necessary to amend and
6 I can develop that, but it may be that we should
7 take this off the table and deal with it later.

8 THE CHAIRMAN: So I am not going to give you, we are not
9 going to give you an indication as to whether that
10 is fine or not. You are going to have to make a
11 decision about whether you are going to apply or not
12 and if you decide not to, you take the risk that
13 Mr Hoskins is going to say, as he has said, "You
14 have not pleaded it and therefore you cannot run
15 it", and just like you, said, he has not pleaded
16 *Magill*. So I think you just need to land on that.
17 I do not think we are very interested in the
18 permutations until you have decided which way you
19 want to go, in which case you can obviously explain
20 it.

21 MS DEMETRIOU: Sir, let me come back to that after the
22 short adjournment, but can I just state our
23 position, which is that there is no parallel
24 between -- so if permission were needed which, as I
25 say, I do not think it is, but if it were needed,

1 there is no parallel between this amendment and the
2 type of amendment which Dr Kent has not made,
3 because it is not a factual question. There is no
4 prejudice to Dr Kent.

5 THE CHAIRMAN: I am not suggesting the answer. I am just
6 saying the only similarity is that if it is not on
7 the pleading and you want to run it, then you need
8 to get it amended. I am not suggesting that I do
9 not know whether it should be treated the same or
10 differently. At the moment, I do not understand
11 there is an amendment application in relation to it.

12 MS DEMETRIOU: Sir, let me come back to that after lunch.
13 I just have to discuss it with my team and I will
14 come back after lunch.

15 THE CHAIRMAN: Just one point on that. I mean, you said
16 it does not arise in relation to the excessive --
17 unfair pricing argument and obviously there is a
18 difference, but there was a counterfactual in that.
19 I just want to be clear that there was a
20 counterfactual on that and you have considered that
21 possibility because the counterfactual, as I
22 understand it, implies that there has been
23 competition on the merits, as argued by the Class
24 Representative. I may have that wrong, it seems to
25 me that is implicit in the counterfactual, is it

1 not?

2 MS DEMETRIOU: Sir, all we are not running from unfair
3 pricing is the particular compulsory licensing
4 *Magill* argument. That is the only point we are not
5 running on unfair --

6 THE CHAIRMAN: I understand that but to the extent that a
7 counterfactual price -- I am just responding on the
8 hoof here so tell me if I am all over the place, but
9 it seems to me that to the extent that the
10 counterfactual price implies what is said to be
11 competition on the merits, that may also imply that
12 there has been the ability for competition which
13 would require the access to an alternative app
14 store. So to the extent that that chain of logic is
15 part of the counterfactual, you do not need to deal
16 with *Magill* and their contents.

17 MS DEMETRIOU: No, so there is certainly no dispute about
18 that. What we are saying is that one of the
19 problems with the unfair pricing case that is run by
20 Dr Kent is that Mr Holt, for example, uses -- the
21 competitive benchmark that Mr Holt puts forward does
22 not account for any compensation that would be paid
23 to Apple for its IP rights. So we do absolutely
24 make that point. That is a separate point.

25 THE CHAIRMAN: I understand. Let me try and put it a

1 different way, which is that it would be unfortunate
2 if later on it becomes apparent that you are arguing
3 that the counterfactual, which does not on its face
4 disclose a requirement to licence, amounts to that
5 because it is implied by the sort of comparator, for
6 example, or by a non-infringing price. I just do
7 not want to find that you have made this decision
8 and that you are not going to address that without
9 having thought that. It is up to you.

10 MS DEMETRIOU: Can I take that away?

11 THE CHAIRMAN: I am highlighting it as a further point
12 which may or may not be taken by anyone but it would
13 be awkward not to deal with it all at once.

14 MS DEMETRIOU: No, thank you very much.

15 THE CHAIRMAN: I am not suggesting that you are wrong at
16 all. All I am saying is if there is a point there
17 let us make sure we deal with that right now rather
18 than later.

19 MS DEMETRIOU: Sir, I am very grateful. So let me, if I
20 can bundle that up with the pleading point and
21 discuss that over lunch and come back after the
22 short adjournment.

23 THE CHAIRMAN: Just before you move on, I am thinking a
24 little bit about timing. I do not know how you have
25 -- we have taken you out of your way a bit.

1 MS DEMETRIOU: So I am going to be very brief now on our
2 third thing, which is no appreciable effects which
3 Mr Kennelly is going to, I am going to pass the
4 baton. Also a little bit on this and then objective
5 justification and then after lunch I will deal with
6 unfair pricing.

7 THE CHAIRMAN: I am just very conscious we have got to
8 fit the CMA in, and I think it would be fair to the
9 CMA, Mr Gregory, I do not know if he is going to be
10 in the room or online, but I think it would be
11 necessary for him to start after the mid-afternoon
12 break.

13 MS DEMETRIOU: That is the assumption.

14 THE CHAIRMAN: Effectively around about 3.30 to give him
15 an hour.

16 I am conscious that you have also got to deal,
17 I assume you are going to deal with Hitt 4 in there?

18 MS DEMETRIOU: Sir, yes.

19 THE CHAIRMAN: Just having had a little look at some of
20 that, I anticipate that might take a little bit of
21 time. I am just wondering how that fits into the
22 timetable.

23 MS DEMETRIOU: Sir, we were absolutely intending to hand
24 over to Mr Gregory, who I understand is going to be
25 here in the afternoon after the shorthand

1 adjournment, so at say 3.30. I do not think, with
2 the best will in the world, we have had an hour less
3 than my learned friends, I do not think we are going
4 to be able to deal with Hitt 4.

5 THE CHAIRMAN: That is what I am anticipating, so the
6 question is, do you want to shorten the short
7 adjournment, so we would be happy to start at
8 half-past 1. I would prefer to do that than to run
9 over at the end, particularly, if it involves you
10 sitting down and Mr Gregory getting up and then you
11 standing up again. Albeit that we could deal with
12 Hitt 4 as sort of an isolated point but it probably
13 is more convenient to deal with it in your
14 submissions.

15 MS DEMETRIOU: That would work well for us if the
16 Tribunal would grant us that indulgence.

17 THE CHAIRMAN: I think it is probably looking like it is
18 probably the best way to get that done.

19 MS DEMETRIOU: Okay, thank you very much.

20 THE CHAIRMAN: Let us plan on that basis, I mean if you
21 think anything different, let us know.

22 MS DEMETRIOU: Thank you.

23 Sir, on no appreciable foreclosure effects,
24 this is the third reason why Dr Kent's allegation of
25 an exclusive dealing abuse is wrong. Can I just

1 remind the Tribunal of *Streetmap*, the relevant part
2 of *Streetmap*, so {AB3/22/24}.

3 Can I just remind the Tribunal of paragraphs 88
4 to 90. Really the key point is that a mere
5 possibility of anticompetitive foreclosure is
6 insufficient, and we also rely on the points at 89
7 and 90. We have developed those points in our
8 skeleton argument. I am just going to give you the
9 cross reference, at paragraph 111. It is {A1/5/39}.

10 The second point we make is that the real world
11 evidence suggests that there would not be
12 appreciably more competition in the counterfactual
13 and we have good real world evidence in the form of
14 the Google Play Store. What that does is it
15 provides an example of an app transaction platform
16 that does not contain the restrictions that Dr Kent
17 complains about and yet, as Professor Sweeting
18 points out in his first report, and I will just give
19 you the reference, it is paragraph 345, reference
20 {C3/3/163}. Despite not having the restrictions
21 that Dr Kent complains about, over 90 per cent of
22 all app downloads on Android devices occur through
23 Google Play and it is common ground that Google Play
24 charges a 30 per cent commission for downloads and
25 in-app purchases. So the real world evidence

1 suggests that the restrictions that Dr Kent
2 complains about do not give rise to any appreciable
3 restriction of competition.

4 Now, Dr Singer conducts two analyses seeking to
5 establish what Apple would charge in the
6 counterfactual, as you know. So the first looks to
7 comparators and the second uses theoretical models.
8 Those will be explored in the evidence. But I just
9 want to make two points about his evidence now so
10 that the Tribunal is clear about what our case is.

11 The first is a point about the start of the
12 counterfactual, so the temporal point that my
13 learned friend addressed.

14 THE CHAIRMAN: Yes.

15 MS DEMETRIOU: Mr Hoskins took the Tribunal to some
16 authorities on that. The effect of those
17 authorities is that the counterfactual must be
18 realistic and stripped of unlawful conduct. That is
19 the effect of the authorities. But let us think
20 about what that means here. So the realistic
21 counterfactual on the facts is obviously one in
22 which the requirements were present because they
23 were in fact present. So Dr Kent needs to show that
24 they should be stripped from the counterfactual
25 prior to the claim period because they were

1 unlawful. But she has no pleaded case that they
2 were unlawful before the start of the claim period.

3 Thinking about 2008, when the App Store was
4 launched, Apple had a tiny share of devices markets.
5 We say it is crystal clear that it was not dominant,
6 even on the market as defined by Dr Kent, because of
7 all the constraints that Dr Kent acknowledges exist
8 would have operated with even more force at that
9 time. Now there is no evidence before the Tribunal
10 on the market conditions at that time or any time
11 before the start of the claim period, and it is
12 simply impermissible to say "Well, these
13 requirements in the counterfactual, you have got to
14 strip them out because they are unlawful." In
15 circumstances where Dr Kent would struggle very hard
16 to show that Apple was dominant in that period. So
17 that is really the point we want to make there.

18 The second point in fact we have already --

19 DR BISHOP: Ms Demetriou, I am a little bit lost. What
20 time period are you referring to there?

21 MS DEMETRIOU: So Dr Singer's primary counterfactual is
22 that the restrictions would not have been in place
23 from the date that the App Store was launched and
24 his delayed counterfactual is that the restrictions
25 are lifted at the date of the start of the claim

1 period in 2015.

2 DR BISHOP: Yes.

3 MS DEMETRIOU: So we are taking issue with his primary
4 counterfactual, because that would involve -- so in
5 order to get to the point where you are removing the
6 restrictions from that pre-claim period time, you
7 are having to show, and this was really Mr Hoskins'
8 point, he was saying, "Ah well, if we can show that
9 they are unlawful now in the claim period, then
10 obviously they are unlawful then, so you strip them
11 out." But we say that is not so because, because
12 apart from anything else, of the dominance point.

13 DR BISHOP: Yes.

14 MS DEMETRIOU: They would have had to have pleaded that
15 and that would have opened up -- this trial would
16 have probably been a week or so longer because that
17 would have opened up further evidence and analysis,
18 no doubt from the experts.

19 DR BISHOP: Thank you.

20 MS DEMETRIOU: I am now going to hand back to
21 Mr Kennelly, thank you.

22 Submissions by MR KENNELLY

23 MR KENNELLY: Thank you, so I will deal with tying and
24 then move on to the outstanding points on the
25 counterfactual and then objective justification.

1 On tying, it is common ground on the legal test
2 that to establish whether alleged tying constitutes
3 an abuse requires the fulfilment of four conditions,
4 ones outlined by my learned friends. The firm must
5 be dominant in the tying market, the tying product
6 and tied product must be distinct. The separate
7 demand and customers who want the tying product must
8 be required to purchase the tied product, and
9 finally that the tie has to lead to substantial
10 foreclosure.

11 We say none of those four conditions is
12 satisfied. Obviously our starting point is that
13 Apple is not dominant in the market for iOS App
14 Distribution Services, but since we are at the stage
15 of abuse we can assume that issue has been
16 determined. So I will move on to the second
17 condition.

18 In asking whether what Dr Kent calls an iOS
19 In-App Aftermarket Services is a separate product
20 from what she calls the iOS App Distribution
21 Services, the key question is consumer demand.
22 Developers, we say, want to get their app into the
23 hands of end users and they want to receive payment
24 in exchange for that.

25 On that basis, IAP is not a separate product

1 from distribution from the perspective of
2 developers, it is a continuation of a single
3 service, which is finding a paying customer for the
4 developer's digital content. If we think about that
5 for a developer who wants to sell, once again a game
6 to end users, obviously the developer first needs to
7 make the game for which it uses Apple's tools and
8 technologies as Ms Demetriou outlined. Next the
9 developer needs to present the game to end users,
10 somewhere where they can find it, and that is what
11 Apple provides in the App Store. The
12 discoverability and marketing functions built into
13 that to help consumers find the games they want and
14 provides information, as we have seen, to customers,
15 like screenshots, descriptions, reviews.

16 A developer could choose to charge the customer
17 at that point, as we saw, in which case the customer
18 would pay £10 say for the download. Dr Kent
19 characterises the Commission for that as payment for
20 the distribution service. That is all the
21 discoverability and marketing functions that we have
22 been talking about. But a developer could, as we
23 have seen, choose a slightly longer path to payment.
24 It could choose to allow the end user to download
25 the game for free but require the end user to pay

1 £10 if the end user wants to get further than the
2 first level of the game or emotes or gems, or
3 whatever it is.

4 In that case, Dr Kent characterises the
5 Commission charged as something, charged for
6 something completely different. The in-app
7 aftermarket service, she says, is nothing more than
8 taking payment and sorting out taxes and receipts.
9 She characterises the Commission as payment for a
10 narrower service than the service of allowing the
11 app to be downloaded. We say that makes no sense.
12 In both cases the developer has sold the game to the
13 user for £10. In fact, the only difference in the
14 second example is that Apple has provided something
15 more involved. In addition to all the services we
16 have discussed, it is effectively allowing the
17 developer to allow the end user to try the game for
18 free, to try before you buy, before spending money
19 on the in-app purchase. It is an extended version
20 of distribution and has obvious practical advantages
21 from the perspective of developers and end users.
22 It is not, we say, a separate product.

23 THE CHAIRMAN: So evidence of how the technical aspects
24 of how this works and about the APIs and the routes
25 to payment, does that make any difference to your

1 argument? Is that contested that evidence and does
2 it make any difference to your argument?

3 MR KENNELLY: No, it is not contested that there were
4 different APIs in play. We say it makes no
5 difference to the question of substance, which is,
6 are these separate markets or a single market, an
7 extended version of distribution.

8 What does Dr Kent say? First, she says that
9 there are stand-alone providers of the tied product
10 waiting in the wings to step in and provide it.
11 That is to confuse, we say, demand with supply.
12 Paddle is the example given by Dr Kent. Paddle is
13 not a developer. Paddle is someone who would like
14 to free ride on what Dr Kent calls Apple's
15 distribution service. What it wants to do is to
16 swoop in, right at the end of the process, of the
17 developer selling digital content and take Paddle's
18 10 per cent commission after Apple has done all of
19 the hard work of finding a paying customer for the
20 developer's app. Dr Kent's idea, to be clear, is
21 that Apple should get paid nothing for that work and
22 that developers would prefer this arrangement
23 because paying Paddle 10 per cent for the tiny piece
24 of work at the end of the process is better than
25 paying Apple 30 per cent for the whole job.

1 The fact that Paddle would like to do this is
2 not evidence of consumer demand, it is evidence that
3 somebody may be willing to supply on those terms.
4 Even if Dr Kent found developers who would like that
5 arrangement, that is not evidence of consumer demand
6 either. What it really is, if there was such
7 evidence, would be evidence of demand for
8 circumventing the mechanism through which Apple gets
9 paid.

10 Just to look at it another way, as Ms Demetriou
11 has explained, in the counterfactual we say even if
12 there were third-party app marketplaces on iOS, and
13 third-party app payments as well, Apple would still
14 charge for its tools and technology and for the
15 distribution service. So even if Paddle could swoop
16 in and replace Apple for the IAP stage, Apple would
17 still require developers, who use the App Store and
18 then take up Paddle's services, it would still
19 require them to pay for the tools and technology
20 they have used and for the use of the App Store.

21 So the real question is where is the demand
22 from developers for a proposition in which they pay
23 Apple for using Apple's tools and technology and
24 also pay Apple for having their app distributed
25 through the App Store. Then they have to pay

1 someone like Paddle for the in-app transaction
2 service on top of that?

3 Dr Kent has not identified any demand at all
4 for that proposition. The reality is there is no
5 pent up demand for different approaches to
6 processing in-app payments. There are some
7 developers, like Epic, who would like to avoid
8 paying for the services they receive from Apple and
9 there are providers, like Paddle, who would like to
10 help them do that. Dr Kent says these are concrete
11 examples, Epic and Microsoft, that do allow
12 third-party payment providers to swoop in at the end
13 of the process and deprive Epic and Microsoft of
14 their commission. It is true that on the Epic Games
15 store developers can have their games downloaded for
16 free and then have someone like Paddle come in at
17 the end to process the payment.

18 But, as you will hear in the evidence, Epic's
19 evidence is that it did that for two reasons.
20 First, because its own in-game payment processing
21 service was very poor; and secondly, maybe more
22 importantly, Epic wanted to encourage Apple and
23 others to take the same approach so that Epic, as a
24 developer, could avoid paying Apple for Apple's
25 distribution services. In any event, there has been

1 almost no take up of Epic's of what seems to be a
2 very genuine offer.

3 For Microsoft there is no evidence at all about
4 the extent of take-up, and for games accounts,
5 Microsoft did not allow this approach.

6 Turning then to the third condition, we say on
7 no view are developers coerced in any way to use
8 Apple's payment system. To show this condition is
9 satisfied Dr Kent would need to show that developers
10 are forced to incorporate Apple's IAP service into
11 their apps. Like Hilti, you will recall from the
12 case, forced its customers to take its nails
13 whenever they purchased Hilti cartridge strips.

14 My learned friend Mr Hoskins cited the
15 *Microsoft* case, where the tied product was the
16 Windows Media Player which, as the Tribunal will
17 recall, the PC OEMs were required to take with the
18 Windows operating system. The product was a piece
19 of software which the OEMs had to install into the
20 PC whether they liked it or not.

21 We say this case is completely different
22 because IAP is a service. It is not a nail
23 cartridge or a piece of software, which the user has
24 to take whether they want to use it or not, because
25 it is a service developers and users do not need to

1 take it at all. Developers are free to use the App
2 Store, and all of what Dr Kent calls Apple's iOS
3 distribution services, without having anything at
4 all to do with what Dr Kent calls Apple's in-app
5 aftermarket services.

6 They can monetise their content in ways which
7 do not depend on in-app purchases and, in fact, the
8 vast majority choose to avoid IAP and monetise their
9 content in other ways. You will see that when the
10 evidence is more developed.

11 Developers can obtain these so-called
12 distribution services without having to obtain the
13 so-called in-app aftermarket services from Apple.
14 For that reason alone, the coercion condition is not
15 satisfied. This is not just theory, this is exactly
16 what we have been discussing, for example, in
17 relation to in-app purchasing. Developers are free
18 to, as a matter of form and substance, take the
19 alleged tying product without the alleged tied
20 product, and the vast majority do so.

21 Just to come back to the point I was discussing
22 with Mr Frazer earlier on this question of the
23 utility of in-app advertising. If I may just give
24 you two references. It will be developed at greater
25 length in the evidence as to the use of ads by top

1 spending genre developers, {C3/8/142}; and more
2 broadly, the significance of ad revenue to
3 developers, {D1/1149/3}.

4 Dr Singer calls the monetisation, options other
5 than IAP, a degraded or penalty option. We disagree
6 with that but for the purpose of tying, it is
7 irrelevant. As a matter of law, we saw in *Hilti* and
8 *Microsoft* that the dominant undertaking was required
9 to offer a version of the tying product that did not
10 contain the tied product at all. Apple does that.
11 If you want Apple distribute an app with no in-app
12 transaction option at all, Apple will do that for
13 you happily.

14 So we say for those reasons, in summary, this
15 is not a tying case.

16 If I may move on, then, to objective
17 justification, and the evidence on safety, security
18 and privacy, some of which I foreshadowed in my
19 opening yesterday. Before I turn to objective
20 justification, relying in particular on safety,
21 security and privacy, I would like to recall how the
22 evidence on those issues demonstrates there is no
23 exclusionary abuse in the first place. It arises in
24 three ways.

25 First, the evidence on safety, security and

1 privacy, demonstrates how Apple competes on the
2 merits. Just to echo what Ms Demetriou said
3 earlier, there is no doubt that rivals in the device
4 markets strike that balance between openness and
5 safety and security in different ways. Apple and
6 Google, in particular, have adopted very different
7 structures reflecting the different way they have
8 struck that balance. They have adopted
9 fundamentally different models based on the way they
10 have decided to strike that balance. The real
11 question for the Tribunal is, is Apple's
12 differentiation a legitimate way to compete?
13 Because Apple's different approach, the balance it
14 struck, is based fairly and squarely on the
15 restrictions which are challenged in this case. We
16 say it is obviously legitimate in an increasingly
17 complex and dangerous online world for Apple to
18 differentiate itself in this way. To be blunt,
19 Dr Kent wishes to force Apple to be more like
20 Android, and to remove that crucial differentiating
21 factor which is so important for fostering
22 competition, not least in device markets.

23 The second way in which safety, security and
24 privacy is important is in relation to the
25 counterfactual. Finally, thirdly, objective

1 justification.

2 I will take up the counterfactual, if I may,
3 next. Professor Lee's evidence for Dr Kent is that
4 if third-party app marketplaces and direct
5 distribution by developers were allowed on the App
6 Store, they would have the ability and incentive to
7 offer the same or better levels of safety, security
8 and privacy and quality as Apple offers currently.
9 Dr Kent's case is that third-party app marketplaces
10 and developers distributing directly have the
11 ability and incentive, willing and able to achieve
12 what Apple has achieved.

13 Just in case the Tribunal finds that surprising
14 I would like to show you where Professor Lee says it
15 in terms and that is in {C2/13/16}. It is paragraph
16 31 first. If I could ask the Tribunal just to skip
17 to the bottom of that page 16, and the very last
18 sentence on paragraph 31. Professor Lee says:

19 "In my opinion, alternative app
20 stores/developers using direct distribution provide"
21 -- he says in the present tense -- "the same
22 standard of app review, including human review, as
23 the App Store in the actual world, and would be able
24 to provide this same standard in the
25 counterfactual."

1 If you skip ahead, please, to page 25,
2 paragraph 37 the actual world comparators and his
3 counterfactual analysis, "show that alternative app
4 stores and developers using direct distribution or
5 side loading are providing ... and would be able to
6 provide ... a comparable standard of app review to
7 Apple through its App Store including incorporating
8 aspects of human review."

9 If you go please to paragraph 84, which is on
10 page 50 of the same report, paragraph 84 second
11 bullet. He is not aware of any evidence that a
12 third-party app store has deliberately adopted lower
13 security and privacy standards than Apple, and he
14 disagrees that other operating systems are less
15 secure than iOS.

16 This, we say, is an extraordinary claim. It
17 flies in the face of all of the evidence before the
18 Tribunal. The Tribunal will recall what the
19 United Kingdom's national cybersecurity centre said
20 about third-party app marketplaces yesterday, I am
21 not going to go back to it, regarding the fact that
22 third-party app stores typically are characterised
23 by their focus on user and developer freedom as
24 opposed to the safety and privacy of users. That
25 tells you, as I have said, the balance they have

1 struck. And you will recall from the report
2 prepared for the Government, for DCMS, dealing with
3 the extent of malware in apps on the Google Play
4 Store and third-party app marketplaces. The Google
5 Play Store is important because of course Google
6 does its own app review and has no lack of
7 resources, but still falls very far short of Apple.
8 That, we say, is because of the balance that Google
9 has chosen to strike between safety, privacy and
10 security and openness and ease for development. Of
11 course the Google Play Store is one of the stores
12 that Dr Kent says should be allowed on to iOS.

13 For third-party app marketplaces, of course it
14 is open to them to review apps before publishing
15 them. We saw their record, very much worse than
16 that of the Google Play Store.

17 To be clear, these third-party app marketplaces
18 which Dr Kent wants to let loose on iOS, it is clear
19 that they would have let in significantly more
20 malware than Apple and allowed significantly more
21 social engineering attacks, driven, we say, by their
22 own incentives as the national cybersecurity centre
23 said for GCHQ. Even the Google Play Store, no lack
24 of ability, what do we infer about its incentives,
25 because we have seen far more malware than the Apple

1 App Store and far less privacy protection
2 consistently through the claim period. That is
3 driven by commercial rational determinations driven
4 by the striking of the balance that Google has made.
5 So the Tribunal should be highly sceptical of
6 Dr Kent's claim that in the counterfactual, where
7 the requirements that challenge restrictions are
8 removed, that third-party app marketplaces and even
9 the Google Play Store would suddenly raise their
10 standards to Apple's current level on safety,
11 security and privacy.

12 It is telling, we say, that Dr Kent has failed
13 to engage with the specific standards which Apple
14 has applied, which have secured the current levels
15 of safety, security and privacy. Particularly
16 safety, which of course is broader than protection
17 from malware, although as you will see in the
18 evidence unsafe content like pornography is
19 particularly attractive to providers of malware.
20 Dr Kent's case is that standards of user safety will
21 also not have deteriorated in the counterfactual.

22 THE CHAIRMAN: Mr Kennelly, can I just make sure I can
23 locate this in the hierarchy of the arguments. I
24 think you started talking about this in relation to
25 competition on the merits, which the first point

1 that Ms Demetriou made, you were supplementing that.

2 MR KENNELLY: Yes.

3 THE CHAIRMAN: Are you into objective justification now?

4 MR KENNELLY: No, I said there were three ways this
5 evidence works.

6 THE CHAIRMAN: I am a bit lost.

7 MR KENNELLY: I am sorry. The middle one is the
8 counterfactual. When Ms Demetriou discussed with
9 you the counterfactual, she was doing that in order
10 to show whether, among other things, whether there
11 had been an abuse in the exclusionary abuse case.
12 In determining whether there has been an abuse, it
13 is common ground that you need to look at what
14 services and prices would be available in the
15 counterfactual and this is material also to the
16 question of quality adjusted prices.

17 THE CHAIRMAN: But this is the competition on the merits
18 point, is it not? Is it not that the same point?

19 MR KENNELLY: Yes, they are very closely linked, yes.

20 THE CHAIRMAN: I had understood them, it is my fault, I
21 am sure.

22 MS DEMETRIOU: I was delineating three points. There is
23 competition on the merits, then there is *Magill*
24 which is separate, then there is no appreciable
25 restriction of competition, which is different from

1 competition on the merits.

2 THE CHAIRMAN: Why does privacy and security go to
3 appreciable competition. Other than obviously, I
4 understand the point about connection to device
5 market.

6 MR KENNELLY: It is because, among other things, if in
7 the counterfactual, privacy and security, and other
8 considerations like that, have collapsed, then you
9 ask what impact will that have on the extent to
10 which you see competition in the counterfactual.
11 Ultimately, in fact, Android is a good example of
12 that, where notwithstanding the more open system,
13 90 per cent of the market share is still held by the
14 Play Store. So there are implications for
15 competition when one factors in these other
16 considerations in determining how they effect
17 competition and pricing in the counterfactual.

18 THE CHAIRMAN: I have not quite located that in an
19 assessment of competition, but I am sure it will
20 come out.

21 MR KENNELLY: It is in the evidence. That is how it
22 relates to competition in a narrow sense, but we
23 also say that in asking whether there are
24 appreciable effects on competition, it is material
25 to ask what kind of competition will you be seeing.

1 Professor Lee's evidence is there presumably to
2 explain that the competition that would take place
3 would have no negative impact on privacy and
4 security.

5 THE CHAIRMAN: I had understood that evidence to be going
6 to the question of benefits which obviously you are
7 coming on to, but you are saying something
8 different.

9 MR KENNELLY: I am because it is important to understand
10 that this evidence is relevant even before you get
11 to objective justification.

12 THE CHAIRMAN: I can see it is relevant in some ways, but
13 I am not sure I can see it is relevant in the way
14 you are saying. No doubt, that will become clear.

15 MR KENNELLY: Among other things, at the very least it is
16 material to look at what has happened in Android and
17 the extent to which, how much competition do you see
18 and in the counterfactual what kind of competition
19 is that and what other quality adjusted prices you
20 would see--

21 THE CHAIRMAN: I can absolutely see the point about how
22 will it change the market. I can see that. I am
23 not sure I see beyond that, though. I do not want
24 to distract you. I am sure it will become clear.

25 MR KENNELLY: The evidence I am describing to you now, of

1 course, is also the evidence for objective
2 justification.

3 THE CHAIRMAN: I am not trying to push back on that. I
4 understand that. I am not sure I am completely
5 seeing it the way you are seeing it. It will come
6 out, I am sure.

7 MR KENNELLY: I will develop the evidence and you will
8 maybe get a clearer picture after we have finished
9 with Professor Lee.

10 THE CHAIRMAN: Yes, I am sure.

11 MR KENNELLY: The important point I am making here, and
12 as I say it is relevant for objective justification,
13 is that the standards which Apple imposes, which
14 have secured these levels of privacy and security
15 are set out in its app review guidelines. I am not
16 going to take you to those now, there is not time.
17 They are extremely detailed and demanding. There is
18 no suggestion that any other app marketplace has
19 adopted standards like them. The standards are not
20 much use unless they are enforced, and again, in the
21 counterfactual the Tribunal needs to ask whether
22 third-party app marketplaces and developers
23 distributing directly have the incentive or ability
24 to enforce standards as Apple does.

25 In terms of enforcement, you will hear evidence

1 from Mr Kosmyнка. This is very important evidence
2 because it amplifies what Mr Federighi says in his
3 statement, about the security challenges which Apple
4 faces, the complexity and sophistication of bad
5 actors and what Apple has done about it. You will
6 see in his evidence the fact that Apple has at least
7 500 experts devoted to app review, reviewing apps in
8 81 languages, split into multiple teams with
9 detailed training in escalation, using bespoke tools
10 for static and dynamic review and to assist in human
11 review. In relation to the critical role of human
12 review, Mr Kosmyнка will speak to the amount of time
13 that will be spent and hours can be spent on
14 difficult apps even if the average is a smaller
15 period. It is just not plausible that third-party
16 app marketplaces have the ability to do anything
17 like that even if they have the incentive to do it
18 which they definitely do not. Even Google Play,
19 with its resources, only adopted human review in
20 2015 and even then does not subject it to -- does
21 not apply it to all apps.

22 Dr Kent's fallback, again as expressed by
23 Professor Lee, is that even if malicious apps and
24 social engineering attacks increase in his
25 counterfactual, users -- users will be able to

1 distinguish the bad apps from the good. We say that
2 is pure wishful thinking and it is contradicted by
3 the evidence that we will explore with him.

4 Dr Kent's ultimate fallback, this is Dr Lee's
5 alternative case, is that Apple in the
6 counterfactual can be allowed to review and approve
7 all the apps which are offered on iOS whether by
8 third-party app stores or developers directly, and
9 that Apple's own standards would be applied. So
10 that Apple would effectively do it all, but for
11 third-party app stores and developers distributing
12 directly.

13 Here, perhaps we come to the answer to your
14 question, sir, which is what effect would that have
15 on competition? If Apple was doing all of that and
16 presumably being paid for it, what effect would that
17 have on competition in the counterfactual? You have
18 my point that even in a more open system like
19 Android, Google Play still has 90 per cent of the
20 market share. But in this fallback position there
21 would be no impact on competition, no material
22 impact at all. Sorry and, even then, there would be
23 worse outcomes for users because Apple would not
24 have its full complement of tools to ensure that its
25 current levels of security and privacy are

1 maintained, not at least because it would not have
2 the information that it gets instantly through its
3 centralised distribution network and payment network
4 to alert it to malicious apps.

5 So I am going to move on then to objective
6 justification. I will be relatively brief on this
7 but I will carry on till --

8 THE CHAIRMAN: Keep going till 1 and then we will resume
9 again at 1.30.

10 MR KENNELLY: This is the third way in which the security
11 and privacy evidence is material and of course Apple
12 bears the burden of proof. I will show you the
13 *Google Shopping* case, I know you have been anxious
14 to see it. I will be showing it to you for a
15 different purpose now, but at least it will be up
16 {AB4/27/12} page 12, paragraph 57. Paragraph 57 is
17 just the abuse, I think the Tribunal knows what the
18 abuse was in that case. Page 108 {AB4/27/108},
19 please and objective justification, just to
20 understand what counts for objective justification.
21 Paragraph 544, first of all, this is what Google was
22 maintaining. It said it was demonstrating that the
23 quality of the service that it offered had improved.
24 Could we skip please to paragraph 547, Google made
25 the argument that for technical reasons it could not

1 show results from other shopping services without
2 damaging the quality of its search results, just to
3 give you a flavour of what Google was arguing.

4 Then paragraph 551 please, we have the test:

5 "It is open to a dominant undertaking to
6 provide justification ... by establishing either
7 that its conduct is objectively necessary from a
8 technical or commercial point of view, or that the
9 exclusionary effect produced may be counterbalanced
10 or outweighed by advantages in terms of efficiency
11 that also benefit consumers."

12 First, we see at 552 what is included in the
13 objective necessity test, and this is, we say,
14 contrary to the suggestion in the claimant's
15 skeleton that only factors external to the dominant
16 undertaking may be taken into account, because the
17 court said that:

18 "It may stem from legitimate commercial
19 considerations, to protect against unfair
20 competition, to take account of negotiations with
21 customers and equally technical" -- I rely on this
22 obviously -- "justifications linked to maintaining
23 product or service performance or to improving
24 performance."

25 Pausing there, before I move on from objective

1 necessity to efficiency gains, there is no
2 suggestion here that for objective necessity the
3 dominant undertaking must show no elimination of
4 competition. We say, of course, that competition
5 has not been eliminated, that constraints are still
6 there even if you are against me on market
7 definition, abuse and foreclosure, there are still
8 constraints which are not eliminated. Just to be
9 clear, because the point was raised by Mr Hoskins,
10 that no elimination competition is part of the
11 objective necessity test, we do not accept that.

12 THE CHAIRMAN: That is partly I think because he was
13 asking for a read across from Article 101. Is that
14 right?

15 MR KENNELLY: He was, he was relying in particular on the
16 *European Superleague* case.

17 THE CHAIRMAN: You do not accept that?

18 MR KENNELLY: No, he would have to do a bit more in
19 closing to land that point, and we do not accept
20 that that is the part of the test for objective
21 necessity. It may not matter because we do not
22 accept that competition has been eliminated. At
23 553, where there is no elimination of competition
24 test, we say we satisfy this also:

25 "As regards efficiency gains, it is for the

1 dominant undertaking to show that the efficiency
2 gains are likely to counteract any likely negative
3 effects ... and that those gains have been brought
4 about as a result of the conduct and it is necessary
5 for the achievement of the efficiency and does not
6 eliminate defective competition by removing all or
7 most existing sources."

8 For that second route to objective
9 justification, it is necessary to show no
10 elimination of competition.

11 That is all I want to say about the case law
12 and it may be an appropriate point to stop.

13 THE CHAIRMAN: We will resume again at half-past 1.

14 (1.01 pm)

15 (Break for lunch)

16 (1.31 pm)

17 THE CHAIRMAN: Mr Kennelly?

18 MR KENNELLY: I am sorry, I cannot resist going back to
19 the point you raised with me just before we
20 finished. It is always a bit distressing when,
21 having made my submissions, I get that look from the
22 Tribunal.

23 THE CHAIRMAN: I am sure it was my fault.

24 MR KENNELLY: No, it does not really matter if it is
25 your fault or not. If it has not happened, it is my

1 fault. The point sir, really, I will give you three
2 highlights, really you were asking how does all this
3 safety and privacy stuff fit, when we say that in
4 the counterfactual there would be no appreciable
5 effect on competition.

6 THE CHAIRMAN: Yes.

7 MR KENNELLY: I will give you three highlights and it is
8 not limited to these. The first is closely linked
9 to the point I was making about competition on the
10 merits, which is if Apple is forced to be more like
11 Android, we will be robbed of a really important
12 differentiating factor, which is important for
13 competition in the device markets and we also say in
14 the transaction markets.

15 The second is Dr Kent says in the
16 counterfactual there will be more competition on
17 price, but we say where is your work on quality
18 adjusted prices because the quality will collapse
19 and that has not been done.

20 THE CHAIRMAN: That is a competition on the merits point
21 too because that is one of the three or four
22 focuses, is it not?

23 MR KENNELLY: Exactly, which is again another link. The
24 third, these are all just safety and privacy,
25 Ms Demetriou has got different points, but I am

1 talking about where the safety and privacy fit in.

2 Then finally, if in that final counterfactual, Apple
3 has to do app review for everybody, then who is
4 going to pay for that and how much? Again, Dr Kent
5 has done none of that work.

6 THE CHAIRMAN: That is very helpful and that does make
7 perfect sense, thank you.

8 MR KENNELLY: Coming back to objective justification and
9 focusing on objective necessity first, our case is
10 that maintaining the highest levels of security,
11 safety and privacy, according to Apple's guidelines,
12 is a legitimate objective in an increasingly complex
13 and dangerous online world where malware, and this
14 is not disputed, and social engineering show growing
15 sophistication and reach. It is a legitimate
16 objective to offer a particularly secure app store.
17 In an online world where interactions have become
18 ever more hostile and where personal and physical
19 dignity are often given scant regard, it is a
20 legitimate objective to offer an app store that
21 prioritises safety and safety according to Apple's
22 strict values. In an online world where threats to
23 users' privacy have also become more complex and
24 pervasive, it is a legitimate objective to offer an
25 app store that imposes the strictest privacy

1 protections for its users.

2 This is not to take the law into our own hands
3 as is deprecated in *Hilti* and *Tetra Pak*. This is
4 about offering an app store that goes beyond the
5 bare legal and regulatory requirements. The
6 evidence demonstrates that the challenged
7 requirements are necessary to secure those
8 legitimate objectives. It is difficult enough, as
9 you will hear from Mr Kosmyka, to do so even with
10 Apple's strict standards and policing. To dilute or
11 remove them would leave the legitimate objective
12 unsecured.

13 As regard to efficiencies, our case is that the
14 benefits produced by the challenged requirements
15 outweigh any harm to competition. I will not go to
16 the figures, they are confidential, but you will
17 have seen the average alleged annual loss per class
18 member. That is on, just to give Mr Holt's
19 analysis, and you will see it in -- the figures are
20 given in Sweeting 2, footnote 331, no need to turn
21 it up, {C3/7/88}. But looking at those figures, we
22 say, to outweigh this alleged overcharge the
23 challenged requirements need only provide a small
24 fraction of the benefits that users enjoy.
25 Professor Sweeting speaks to the value of those

1 benefits, again no need to turn it up, you will hear
2 that when he gives evidence.

3 What does Dr Kent say in response? She says,
4 first of all, that none of this matters and
5 Mr Hoskins could not have been clearer, because the
6 effect of the restrictions is to eliminate
7 competition for the distribution of native iOS Apps
8 or the provision of what she calls her in-app
9 aftermarket services. But even if, we say, even if
10 the competitive constraints that we identify, the
11 point I made just before we broke, are insufficient
12 to rebut Dr Kent's case on market definition, on
13 dominance and on foreclosure, they have not been
14 eliminated and for that I rely on the submissions in
15 the evidence that I outlined earlier. Those
16 constraints operate even if you are not with me on
17 the prior steps.

18 This argument about elimination also
19 illustrates the absurd consequences of Dr Kent's
20 market definitions. Those markets are defined so
21 narrowly that competition has been eliminated in its
22 entirety and that means the Tribunal is compelled to
23 ignore the enormous efficiencies, benefits and
24 procompetitive effects that these challenged
25 requirements have created. To be absolutely clear

1 about this, when Professor Bishop raised with my
2 learned friend Mr Hoskins, "Well where does the (I
3 think the word was compensation) for consumers fit
4 in?" Mr Hoskins says, "Oh do not worry, it will
5 come in objective justification, that's where it has
6 its role." But not so, when we got to that stage
7 Mr Hoskins said, "Actually, because competition is
8 eliminated entirely on these very narrow markets,
9 all of that evidence about safety, privacy and
10 security is irrelevant, it has no home." On his
11 argument, competition law compels you to allow open
12 season on iOS without regard for privacy, security
13 and safety, because those considerations cannot
14 serve to justify any restrictions at all because
15 competition is eliminated in those markets.

16 Now, the second point Dr Kent makes about
17 objective necessity is that there should be a
18 requirement that the impugned conduct is essential
19 to the survival of the main operation of the
20 dominant undertaking. That begs the question as to
21 what is Apple's main operation for which its
22 integrated and centralised approach is necessary?
23 For that, can I ask you to turn up the *CEAHR* case
24 that we relied on in our skeleton. Mr Hoskins, my
25 learned friends skipped over this rather quickly,

1 {AB4/23/1}. Now just to summarise, this was a
2 complaint to the European Commission which was
3 rejected and the rejection was appealed. It is the
4 Article 101 findings on objective necessity which
5 are of interest, and if you go please to paragraph
6 60, which is on page 18, {AB4/23/18}. You will see
7 what the Commission said dealing with objective
8 justification. Just to be clear that the
9 restriction was that prestigious Swiss watch
10 manufacturers restricted the ability of watch
11 repairers to get spare parts to allow them to repair
12 the luxury watches and the question was, was that a
13 restriction -- restrictions on competition, could it
14 be justified? At paragraph 60, you will see the
15 Commission's argument:

16 "Those systems, those restrictions were
17 justified by the objectives put forward by the Swiss
18 watch manufacturers, namely, the need to take
19 account of the increased complexity of the watch
20 models, the preservation of brand image, the
21 maintenance" -- and I rely on this -- "of high and
22 uniform quality repair services and the prevention
23 of counterfeiting."

24 If you go to paragraph 65, you will see the
25 court rejected the idea that preserving brand image

1 alone would do, but then we see the critical
2 paragraph 66 on page 19:

3 "It ... follows that ... although preserving a
4 brand image cannot justify a restriction of
5 competition by the establishment of a selective
6 repair system, the objective of preserving the
7 quality of products and ensuring their proper use
8 may, in itself, justify ... a restriction."

9 This is dealing with objective necessity, so
10 the Swiss watch brands could justify their refusal
11 to supply spare parts to these independent repairers
12 on grounds that they sought to preserve the high
13 quality of their products and ensure their proper
14 use.

15 THE CHAIRMAN: So this is not a *Metro* case.

16 MR KENNELLY: Sorry?

17 THE CHAIRMAN: This is not a *Metro* case?

18 MR KENNELLY: No.

19 THE CHAIRMAN: It is not because it is a distribution
20 arrangement. I mean, there is a reference to *Pierre*
21 *Fabre*, is there not?

22 MR KENNELLY: *Pierre Fabre*, yes, selective distribution
23 cases.

24 THE CHAIRMAN: Yes, so the question, I think is, is this
25 an application of objective justification, or is it

1 actually just the application of that line of
2 authority. I think you are telling me it is the
3 latter, are you?

4 MR KENNELLY: Sorry, if you go back to paragraph 53 on
5 page 17. There you see the reference to *Metro*,
6 which is the authority that these distribution
7 networks, which are restrictive, can be justified
8 where they are necessary to preserve the quality and
9 ensure the proper use.

10 THE CHAIRMAN: Yes.

11 MR KENNELLY: But the basis for this lies not in Article
12 101(3), but in justification for the prior stage --

13 THE CHAIRMAN: I understand, yes.

14 MR KENNELLY: Which is what is analogous to objective
15 necessity in Article 102.

16 THE CHAIRMAN: You are taking the justification that
17 comes from the *Metro* line and saying that it is
18 helpful in understanding how it works here.

19 MR KENNELLY: Precisely, because this question of main
20 operation. So the question of what is Apple's main
21 operation, what is Apple's main operation, that is
22 the question that Dr Kent tells us we have to ask.
23 We do not accept that, but if we have to ask that
24 question, we say, by analogy with these watch
25 manufacturers, it is the design, manufacture and

1 sale of integrated devices, the operating system and
2 the App Store, not just any device manufacturing
3 business. Because if main operation meant any
4 device manufacturing business, then the court here
5 in this judgment would have said "Well, you can only
6 justify your restrictions if they are necessary or
7 essential to operate all watch manufacturing
8 businesses", but there was a particular recognition
9 given to the fact these were of a particular quality
10 for which restrictions were needed.

11 So if we have to look at what is the main
12 operation, Apple's entire business model is that it
13 is an integrated and centralised model and that is
14 what ensures the high quality of its ecosystem. The
15 challenged requirements are a core element of that
16 product, its design and its competitive offering.

17 In the counterfactual, Apple would have to
18 change that centralised approach in a fundamental
19 way. It would have to develop an operation which is
20 by definition fundamentally different from its main
21 operation. Just before I move on to my final point
22 on *Hilti* and *Tetra Pak*, there may be an echo here of
23 what main operation means in the interchange cases.
24 My learned friend, Mr Hoskins took you to this when
25 he showed you the Sainsbury's case in the Court of

1 Appeal, when Visa and Mastercard argued about
2 objective necessity there, and the Court said, "Well
3 these restrictions are not necessary for the
4 survival of your main operation", the main operation
5 being a four party payment scheme. But of course,
6 Amex, in that case, was not treated as having the
7 same main operation as Visa and Mastercard, it was a
8 three party scheme, was fundamentally different from
9 a four party scheme, but it did offer card services
10 to merchants and users. From a user and from a
11 merchant facing perspective, there were strong
12 similarities, but there was a fundamental difference
13 in the model that they had adopted.

14 Similarly here, between Android and Apple there
15 was a fundamental difference in what we would
16 classify is, if you need to look at main operation,
17 in the main operation of how these businesses
18 operate.

19 THE CHAIRMAN: Just so I am clear about what you are
20 saying here. So you are saying that when you are
21 thinking about what the main operation is we
22 effectively have to think about an operation of the
23 sort which is integrated and has the features that
24 you have been explaining to us about, whatever it
25 happens to be, security, privacy, centralised. You

1 are saying that is the standard we should be looking
2 at for whether it is necessary for that, rather than
3 just whether Apple can maintain a manufacturing
4 platform.

5 MR KENNELLY: Exactly, exactly. It may be said that is
6 rather circular, you are saying the thing that you
7 are seeking to defend is the main operation, but you
8 do have to look at the difference between Android
9 and Apple quite closely. If one sees the
10 differences, they are fundamental and that
11 fundamental difference is what is Apple's main
12 operation for these purposes.

13 THE CHAIRMAN: Quite a lot of things seem to be quite
14 circular in this case, as far as I can tell.

15 MR KENNELLY: The arguments, often evidence is being
16 recycled for different arguments but the point is a
17 very important one, and what distinguishes Apple
18 should not be lightly thrown away as Dr Kent would
19 have us do.

20 Finally, *Hilti* and *Tetra Pak*. In those cases,
21 upon which Dr Kent places reliance, the dominant
22 undertaking sought to justify restrictions on the
23 grounds that the excluded products threatened public
24 health and, in fact, even legal requirements. The
25 court said, "Although in principle public health and

1 safety and other public interests can be a basis for
2 exclusionary behaviour, the law cannot be taken into
3 the dominant undertaking's hands, and they should be
4 expected to have recourse to regulators if they have
5 a public health or safety concern."

6 Just two points about *Hilti* and *Tetra Pak*.
7 Even on their face, they are reasoned on the basis
8 of an assumption that it was possible for laws and
9 regulations to ensure effectively that consumers
10 could be kept safe from dangerous products. That is
11 why when you look at those cases, there is real
12 scepticism about the claims of the dominant
13 undertakings in the *Hilti* and *Tetra Pak* when they
14 could very easily have complained to regulators who
15 could have taken action.

16 Our context is far more complicated. It is
17 simply implausible that a catalogue of criminal
18 offences or possible regulatory requirements during
19 the claim period could ever have produced a
20 sufficient deterrent to protect UK consumers from
21 malicious online actors worldwide. As a second and
22 final difference I want to draw to your attention,
23 Apple's concern, as you have seen in the evidence,
24 is not simply that a user on his/her device will be
25 harmed by a particular malware that he or she has

1 downloaded, or social engineering. It is the risk
2 that in a decentralised app distribution system,
3 users come to harm because of bad apps downloaded by
4 other people, and that the harm spreads so widely
5 and silently that calling a public authority, and
6 who would one call, is just unrealistic. So the
7 analogy with *Hilti* and *Tetra Pak*, we say, is
8 misplaced.

9 I will hand over, if I may, at that point to
10 Ms Demetriou.

11 Submissions by MS DEMETRIOU

12 MS DEMETRIOU: Thank you, sir. I am going to now address
13 the unfair pricing allegation. We say that
14 Dr Kent's case on unfair pricing is flawed for two
15 overarching reasons. I will summarise the two
16 reasons first and then take the Tribunal briefly
17 back to some of the key authorities and then develop
18 our submissions in so far as I have time. I am
19 hoping to convey the gist of our case in opening and
20 obviously you will hear evidence on it too.

21 The first overarching submission is that a cost
22 base analysis is unsuitable as a methodology for
23 determining whether Apple's commission is abusive,
24 yet the bedrock of Dr Kent's case is the
25 profitability analysis conducted by Mr Dudney which

1 is then adopted by Mr Holt. The reason that it is
2 unsuitable is that for some products, including this
3 one, the costs of producing them are uninformative
4 as to their value. The value of the product to the
5 purchaser may far exceed the amount it cost to
6 produce it.

7 Just thinking about, for example, taking an
8 analogy, so last year, Magritte's painting "L'empire
9 des lumieres" was sold in New York, it was the
10 highest selling painting last year and it was sold
11 at auction by Christie's for over \$121 million. Now
12 it is obviously meaningless when thinking about
13 whether that price is fair or unfair to be enquiring
14 about the cost of oil paints and the costs of the
15 canvas or the costs of Magritte's labour back in
16 1954 when he painted it. The same is true of
17 intangible and innovative products like Apple's.

18 There is a further point here too. For
19 intangible products, like transactions on the app
20 store the distribution of apps, the product can be
21 replicated infinite number of times without any
22 material increase in costs. So if a costs based
23 approach were appropriate, it would mean that a
24 particular percentage commission might be fair if
25 the product were not very successful, but would then

1 become unfair if it were hugely successful,
2 benefitting developers who were thereby able to
3 realise enormous value. We say that that is
4 obviously nonsensical.

5 The true position is that the innovator is
6 entitled to be paid fair value for each and every
7 use of its intangible product or service and that
8 means that the more the product or service is used,
9 the greater the profit that the innovator earns.
10 For an intangible product that is extremely popular
11 the revenues can end up leaving costs very far
12 behind. We say that there is nothing wrong with
13 that. The aggregate value created for customers may
14 be even greater still. As we will see in the case
15 law, competition law understands this and the courts
16 have warned against carrying out this kind of
17 profitability exercise in relation to intangible
18 products.

19 So we say that it is surprising that Dr Kent
20 should have embarked on this exercise for the App
21 Store as though it were no different from a
22 manufacturer of generic medicines, for example. To
23 be clear, we are not saying that Mr Dudney's
24 profitability analysis is inadmissible. Of course
25 we are not saying that. But if you are, contrary to

1 what I have just said, going to, as a Class
2 Representative, start with an unfair pricing
3 assessment for this kind of product by looking at
4 costs and doing what Mr Dudney has done, then we say
5 it is absolutely essential that a proper assessment
6 of economic value to the purchaser is then carried
7 out.

8 The short point that we make here is that
9 Dr Kent has simply not sought to address this to any
10 meaningful extent. The only part of Mr Holt's
11 evidence, of his analysis, which even attempts to
12 assess demand side value, is his comparators
13 analysis, that is the only thing we have. The
14 problem with that is that it fails to do so
15 adequately because the premise for it, as he says
16 himself, so this is not disputed, is that the value
17 he accounts for is only the value in the narrow
18 distribution and payment processing services. That
19 was the proposition one I started with yesterday.

20 Now, Mr Armitage made the surprising submission
21 that it is an abuse of process for us to argue at
22 this trial that a cost based analysis is
23 inappropriate to establish unfair pricing on the
24 facts of this case. We say it is, with respect, not
25 only surprising, but a hopeless submission. It is

1 telling, we say, that it was Dr Kent's first
2 argument. In its judgment -- in the Tribunal's
3 judgment refusing Apple's strike-out application,
4 the Tribunal did not find that Apple was wrong to
5 say that economic value needed to be accounted for.
6 On the contrary, it held that economic value does
7 need to be accounted for, but declined to strike-out
8 Dr Kent's case or grant reverse summary judgment in
9 favour of Apple, because the Tribunal took the view
10 that Mr Holt could address economic value in his
11 evidence for this trial. That is what the judgment
12 of the Tribunal did, with respect.

13 Now, we are not, as I say, seeking to argue
14 Mr Dudney's profitability analysis is inadmissible
15 in any way. We are seeking to establish that it is
16 inappropriate and uninformative on the facts of this
17 case. The very premise of the Tribunal's judgment
18 on the strike-out application was to leave the
19 question of whether Dr Kent's analysis is
20 appropriate on the facts, to this trial. So the
21 idea that we are now precluded from saying, well, a
22 cost based analysis is uninformative, is simply
23 nonsense.

24 The second overarching submission is that the
25 profitability analysis that Mr Dudney and then

1 Mr Holt have carried out is uninformative, and that
2 is for a number of reasons which I am going to come
3 to in due course, but I want to go briefly back to
4 the case law. Could we go back to *Flynn* in the
5 Court of Appeal, please. So that is {AB3/37}. I am
6 just going to go back to a few paragraphs in this
7 but before I do so, again I want to emphasise that
8 this case was about a generic pharmaceutical
9 product, *Phenytoin*, that had been developed in the
10 1930s and was without any patent protection, and
11 where the CMA had found that there was no
12 innovation. So really the opposite end of the
13 spectrum to the kind of product we have in the
14 present case, and the kind of case where it plainly
15 was meaningful to look at the cost of production.

16 Mr Armitage took you to the court's analysis of
17 *United Brands* and I just want to emphasise a few key
18 points. If we go to page 19, please, paragraph 62
19 at the bottom of the page. What the Court of Appeal
20 is saying there is that Cost-Plus is only one method
21 of determining whether a price is excessive. So it
22 is not mandatory, it is one method. If the
23 Cost-Plus methodology is going to be used, then it
24 is necessary to go on to examine whether the price
25 is also unfair in itself or by reference to

1 competing products. So in other words, the two-limb
2 test applies if the Cost-Plus approach is being
3 used. But then if we go over the page to paragraph
4 63, at the top of the next page, the court there
5 explains that there are other economic ways of
6 deciding whether a price is unfair. Our essential
7 submission is that what way is appropriate will
8 depend significantly on the type of product, as I
9 have said. You then have the court surveying some
10 of the key cases. These cases, or some of them,
11 establish that the facts of a particular case may
12 mean that it is inappropriate to conduct a cost
13 based analysis. If we look at page 24, I just ask
14 you to note what the court says at paragraph 78,
15 when looking at the *Latvian Copyright* case. So it
16 is a few lines down:

17 "This was not a case involving a Cost-Plus
18 analysis since in cases involving intangible
19 property, such as copyright, it is recognised that
20 such an analysis might be artificial."

21 I will come back to that.

22 Then going on, please, to page 31, we have
23 paragraph 97. Mr Armitage took you to this, but we
24 see at (iii) and (iv), really the point I was just
25 endeavouring to make, being made by the Court of

1 Appeal quite clearly that there are different
2 methods that can be used and which is appropriate
3 depends on the facts and circumstances of the case.

4 Now, I want to take you next to the Court of
5 Appeal's judgment in *Attheraces*, and you are
6 familiar with it because Apple did take you to it in
7 the strike-out case. I will take it quite shortly.
8 But it is at, this is the same authorities bundle,
9 tab 9, {AB3/9}, and the Tribunal will recall, I
10 think, the essential facts of the case, which
11 concern the provision of pre-race data owned by the
12 British Horse Racing Board provisioned to *Attheraces*
13 (ATR).

14 We can take it, I think, for present purposes,
15 from the top of page 27, {AB3/9/27}, and you can see
16 that the analysis begins at that point. We read,
17 you can read paragraph 152 to yourselves. Here as
18 well what the Tribunal is looking at is the
19 relationship between price and economic value of the
20 product supplied. We then have a summary of what
21 Etherton J (as he then was) had found in the trial
22 below. He had, Etherton J said that he accepted
23 that it was necessary to consider the economic value
24 of the pre-race data, but if we actually look at
25 155-156, what we see is that he did not consider the

1 demand side value. Instead, he took the view that
2 the value of the product was reflected in what he
3 called the competitive price, which he established
4 by reference to the cost of compiling the database
5 plus a reasonable rate of return. Pausing there,
6 implicitly, what he seems to have had in mind when
7 he called that a competitive price is a
8 counterfactual market in which multiple competitors
9 were free to spend £5 million building their own
10 database containing the information about BHB's
11 horse races, and the idea is that if multiple firms
12 were free to create the same dataset and sell it on
13 the market, the price would come down to a
14 reasonable return on the cost of producing it.

15 As the Tribunal will see during the evidence in
16 this trial, this is essentially the view that
17 Mr Holt has taken as to the nature of the correct
18 enquiry.

19 Then if we go to page 32, please we see the
20 court considering economic value, and you have at
21 the top of the page the BHB's submission at
22 paragraph 186 and Mr Roth for the BHB argued that
23 the judge below had not given any separate analysis
24 of economic value other than the competitive price
25 defined in terms of the supply side. So he had not

1 looked at the demand side. Then at 189 you can see
2 an elaboration of the BHB's argument which is
3 analogous to our argument in the present case, that
4 economic value is a different concept from cost as
5 it reflects revenue earning potential to the person
6 who acquires it. That is really what we say, that
7 one needs to look at the revenue earning potential
8 in the hands of the developers, of the enormous
9 value that Apple confers on developers.

10 Then if we go to page 33 at 191:

11 "The BHB", and this is still their argument,
12 "says that even on a competitive price approach it
13 would be wrong to find it was cost-plus."

14 Then the court's conclusions start at the
15 bottom of page 34 and if we can take it from
16 paragraph 203, we can see that the court agreed with
17 the BHB's submissions and could we go over the page,
18 please. Could I just ask the Tribunal to read to
19 yourselves paragraphs 204-206.

20 Then in 207 we see in the third sentence
21 particularly that the Court of Appeal here reaches
22 the same -- obviously before the Court of Appeal in
23 *Flynn*, but reaches the same conclusion, that it is
24 not necessary to adopt a cost-based approach.

25 Then if we look at page 36, please. Paragraph

1 212, you see the court there reflecting the BHB's
2 central contention that there is no reason why the
3 economic value of the product should not be its
4 value to the purchaser rather than Cost-Plus.

5 Then 213, the court notes the Commission's
6 decisions in *Scandlines*, which we also rely on. I
7 am not going to have time to take you back to it,
8 but I think you will recall the basic facts, and was
9 endorsing the Commission's approach in that case.

10 Then if we look at paragraph 214:

11 "Economic theory recognises the relevance of
12 externalities to price. The judge rejected BHB's
13 argument that the benefit of the system to overseas
14 bookmakers was a relevant externality. But it was
15 incontestable that the overseas bookmakers were
16 paying ATR, in a competitive market, amounts which
17 afforded it a handsome profit which it wanted, so
18 far as possible, to keep. The facts found by the
19 judge do not suggest that anybody is going to go out
20 of business as a result of the alleged abuse of
21 dominant position. Despite its elaborate legal and
22 economic arguments and the high levels of moral
23 indignation, the case is about who is going to get
24 their hands on ATR's revenues from overseas
25 bookmakers. There is no need to classify the

1 benefit derived by the bookmakers from the
2 deployment of part of BHB's products as a 'positive
3 externality' in order to recognise that it has a
4 bearing on whether their pricing is excessive."

5 Then can we just go on to the next page and
6 looking at the first part of 215:

7 "This said, we accept that there is moral force
8 in ATR's position. ATR adds value (in the form of
9 pictures of the races) to the pre-race data and has
10 the task of collecting overseas bookmakers,
11 payments. It is taking all the risks and as the
12 judge found will have to absorb most or all of the
13 costs while BHB seeks to take half of what they
14 make."

15 Pausing there, in that case, all that the BHB
16 provided was data, nothing else, and these were data
17 that the BHB had to produce for its own purposes
18 anyway. It was not doing anything additional for
19 ATR. There were no IP rights, that is a point we
20 get from earlier in the judgment, in the data in any
21 event. So all the real work in ATR's venture
22 including all the commercial risk, was borne by
23 *Attheraces*, yet the court concluded that a
24 fifty-fifty split was not unfair.

25 The present case, our case, is stronger than

1 this because it is not the case that developers take
2 all the risk. As I have submitted, and as the
3 Tribunal will see during the course of the trial,
4 the developments of apps for iOS is in the nature of
5 a joint enterprise between Apple and app developers.

6 Just looking at the last sentence of this
7 paragraph, there is little, if any, evidence that
8 competition in the market is being distorted by the
9 demands made by BHB upon ATR. We say the same here.
10 No evidence that competition between developers is
11 being distorted in any way as a result of Apple's
12 commission.

13 Then looking at 216, or can I just ask the
14 Tribunal to read to yourselves paragraph 216,
15 please. This is an interesting paragraph because
16 Mr Hollander's submission, which was rejected by the
17 Court of Appeal, was essentially the point being
18 made by my learned friends in this case. So by
19 referring to, by putting forward a profitability
20 analysis, they seem to be saying whatever the demand
21 side value, so be it if developers are earning
22 millions, and being sold for billions as a result of
23 having access to Apple's tools and technology, it
24 does not matter. Apple is constrained in what it
25 can charge and the rest of the profits lie with the

1 developers. That seems to be the implications of
2 their case. But the court rejected that and
3 accepted Mr Roth's (as he then was) submission for
4 the BHB. In other words, if the value of the
5 product was a high one, then the supplier could
6 raise his prices to reflect it. We see the last
7 sentence of 217 makes the same point. The
8 conclusion at 218:

9 "In holding that the economic value of the
10 pre-race data was the cost of compilation plus a
11 reasonable return, the judge took a too narrow a
12 view in Article 82. In particular he was wrong to
13 reject BHB's contention on the relevance of the
14 value of the pre-race data to ATR in determining the
15 economic value of the pre-race data and whether the
16 charges specified by BHB were excessive and unfair."

17 That is, so we do rely on what the Court of
18 Appeal says in this case, and we say that the
19 reasoning applies with particular force in the
20 present case. I am not going to take you to
21 *Scandlines* because you will recall it and just in
22 view of the time.

23 The other cases, of course, the Tribunal will
24 also recall, and I am not going to take you to these
25 cases in view of the time either, but we have

1 addressed them in our skeleton. The Collecting
2 Society cases, including the *Latvian Copyright* case,
3 and in those cases a Cost-Plus methodology was not
4 applied at all because it was unsuitable given the
5 nature of the product. Pausing here, the reason why
6 nobody does a Cost-Plus analysis in these copyright
7 cases is not because it is impossible to estimate
8 the costs of producing the music, of course it is
9 possible and we know that the costs are trivial,
10 musical instruments, studio recording time and the
11 time of the musicians. The costs of producing many
12 famous songs would have been really trivial. But
13 the reason you do not carry out a Cost-Plus analysis
14 is that the real value of music is intangible and
15 impossible to measure other than by reference to
16 what people are prepared to pay for it. The same is
17 true with software.

18 The value of Apple's code does not depend on
19 how long it takes to write. The value is in what
20 the code can do and what it enables others, like
21 developers, to do. A brilliant idea can create huge
22 amounts of value even if it takes a moment's flash
23 of inspiration.

24 If you just bear with me for a moment because I
25 am trying to shorten what I was going to say. Just

1 coming back, just to make one further point in
2 relation to *Attheraces* and *Scandlines*. They are
3 significant because, aside from the reasons I have
4 given, also because they show in this way that the
5 approach taken by Mr Holt and Dr Kent is wrong, so
6 you do not assess a fair price for pre-race data by
7 imagining a world in which there are multiple
8 suppliers able to supply reliable pre-race data,
9 that was the approach of Etherton J. Equally, in
10 *Scandlines* you do not assess a fair price for access
11 to a port by imagining a world in which there are
12 multiple similar ports sitting right next to each
13 other in the same desirable location. Instead you
14 look at the value that customers actually derive
15 from the product or service they are purchasing, and
16 ask whether that is consonant with what they are
17 paying.

18 Drawing together my submissions so far, we say
19 that as in the copyright cases and *Attheraces*, the
20 product in this case is an intangible product, and
21 we are a much stronger case than *Attheraces* for the
22 reasons I have given, it is an innovative product
23 protected by extensive intellectual property rights.
24 What that means is that a comparison of the price of
25 the product with the cost of producing it is an

1 unsuitable method by which to test the fairness of
2 the price just like with the Magritte painting. It
3 does not tell you anything really about the value of
4 the product. It has a value to the user that bears
5 no relation to the cost of producing it. It is
6 really disconnected from it.

7 The further point on this, I think we can see
8 from Professor Hitt's second report, if we go to
9 {C3/4/219} at paragraph 395. Can I just ask you to
10 read paragraph 395, please, this is the point about
11 the fixed costs that I summarised a few moments ago.

12 THE CHAIRMAN: And over the page?

13 MS DEMETRIOU: If we go over the page as well what he
14 says at 396 is also important, because this feature
15 of the App Store that value increases with further
16 use without much corresponding increase in cost is
17 actually also true of apps. If you look at the
18 confidential figures, you can see that just the top
19 three developers, you can see what they have brought
20 in just on the App Store just in the UK. Their
21 global revenues of course from the App Store are
22 obviously much higher, and again higher when you
23 take into account in-app advertising revenues that
24 the developers earn. So their billings obviously
25 bear no relation at all to the cost of developing

1 their apps. Again, that would be a meaningless
2 comparison. The reason why that is important to our
3 case, thinking about Apple, is because it is an even
4 more acute version of the issue that I showed you
5 that was discussed by the Court of Appeal in
6 *Attheraces*, where the court said somebody is going
7 to be earning these revenues that bear no relation
8 to cost, so why is it okay for developers to earn
9 the revenues that bear no relation to costs, but not
10 okay for Apple?

11 Really, this comes back to the point about the
12 supermarket where the Court of Appeal rejected
13 Mr Hollander's submission, where he said no matter
14 what the vast earnings as a result of this data, the
15 supplier is just limited to some fee that bears a
16 relation to cost, but then the supermarket can
17 charge what it wants.

18 DR BISHOP: Ms Demetriou, a tiny point. I am looking at
19 paragraph 396 but I have forgotten whose report this
20 is.

21 MS DEMETRIOU: This is Professor Hitt's second report,
22 Sir.

23 THE CHAIRMAN: Can I ask you, you do not unless I have
24 missed something, you are not saying what you think
25 economic value is. You do not set out to carry out

1 that exercise. Obviously we have some information,
2 like the one you have just indicated here, that you
3 say suggests the economic value to developers is
4 very large, and there are no doubt some bits of
5 evidence that suggests it is substantial for the
6 consumers. There is no criticism. Just to be
7 absolutely clear, you are not in that business. You
8 are not intending to suggest to us that the economic
9 value can be dealt with in a particular way, or
10 should be analysed in a particular way?

11 MS DEMETRIOU: Sir, we are saying that it is essential,
12 in order to establish an unfair pricing case, it is
13 essential to address demand side value and it has
14 not been.

15 THE CHAIRMAN: That is a burden point.

16 MS DEMETRIOU: That is a burden point, but it is an
17 important point, but it is an important one.

18 THE CHAIRMAN: I just want to be clear that is where we
19 are.

20 MS DEMETRIOU: It is not the case that Apple has adduced
21 no evidence of economic value because we can see in
22 Professor Hitt's report, and there are further
23 details about this in his evidence, he gives figures
24 as to the revenues that developers have earned from
25 the App Store, so that has been put in evidence by

1 us.

2 THE CHAIRMAN: I have seen that, but that is a little bit
3 different from -- well I do not even think you set
4 out a methodology by which one would do it. Again,
5 no criticism I just want to be clear that that is
6 not your case. You are not suggesting that is there
7 a way you could do it, let alone what the answer
8 would be.

9 MS DEMETRIOU: We are saying the methodology of course of
10 Dr Kent is inapposite. What we are saying, standing
11 back, if you are asking me how would a Class
12 Representative go about establishing unfair pricing.

13 THE CHAIRMAN: I am not doing that. I just want to be
14 clear about where your case is and my understanding
15 that you are not embarking on any positive case in
16 relation to this.

17 MS DEMETRIOU: We are to the extent we have put in
18 evidence... data as to the value on the demand side
19 so that needs to be addressed.

20 THE CHAIRMAN: I understand that.

21 MS DEMETRIOU: We are not saying this is the figure.

22 THE CHAIRMAN: You are not even necessarily saying how
23 you go about doing it.

24 MS DEMETRIOU: That's right, sir, but standing back we
25 say the Class Representative has come nowhere near

1 establishing a case of unfair pricing. Can I just
2 take you to some headline figures of why we say that
3 is.

4 THE CHAIRMAN: I am happy for you to do that, but I want
5 to stick with this for just a minute. I do
6 understand you to say that there is no reason to
7 suggest that 30 per cent is not a competitive price,
8 but as I understand it, you are not saying that
9 there is any science behind the 30 per cent that
10 provides, if you like, a justification for the
11 benefit, because, as I understand it, it was set
12 fairly arbitrarily in 2009 and so much has changed
13 and it would be quite difficult I think to make that
14 connection.

15 MS DEMETRIOU: Sir, you are quite right to say that we
16 are not seeking to identify the price above which a
17 commission would be unfair. So we are not doing
18 that, but what we are doing is saying we are
19 establishing that Apple's commission, the 30 per
20 cent commission, is fair. So we do have evidence to
21 establish that.

22 THE CHAIRMAN: Because you say there is plenty of
23 evidence of very significant consumer value.

24 MS DEMETRIOU: Amongst other things because also 30 per
25 cent is less than other people charge.

1 THE CHAIRMAN: The comparators as well.

2 MS DEMETRIOU: Exactly.

3 THE CHAIRMAN: There is also this business of the
4 aggregation of the different services and the
5 comparisons as well.

6 MS DEMETRIOU: Exactly.

7 THE CHAIRMAN: There is a complicating factor in this
8 case in the 30 per cent, which was set without
9 reference to anything in particular, which was being
10 charged on a small number of developers and paid by
11 a small number of users, you are being paid for a
12 whole lot of different things, some of which go back
13 to 2008 and involve innovation, and so on, and some
14 which are today the costs of actually just running
15 an app store. So it is quite a difficult landscape
16 to get your head around, is it not?

17 MS DEMETRIOU: Can I just pick up one point, where you
18 say set without any particular reference to anything
19 in 2008, can I show you some of Mr Schiller's
20 evidence in the Australian trial when he was
21 cross-examined. I think it might be useful just to
22 show you that briefly.

23 THE CHAIRMAN: I do not want to take you out of your way.
24 I am conscious of the time, if that is going to come
25 out at some point.

1 MS DEMETRIOU: It is a convenient time. If we can go to
2 {G2/18/82}. It is really, I am not going to read it
3 out. Could you just look at, read to yourselves
4 from line 25.

5 MR WARD: Sir, sorry to interrupt. There is obviously
6 some concern that Mr Schiller's cross-examination in
7 Australia is essentially being relied on by
8 Ms Demetriou as primary evidence. He has given a
9 230-odd paragraph statement in this case. The
10 transcripts are in the bundle. No question. We are
11 not saying I think they are somehow inadmissible,
12 but hope it is not going to be said that anything
13 Mr Schiller said in Australia that is not challenged
14 in these proceedings is somehow therefore accepted
15 or something of the kind.

16 THE CHAIRMAN: I think Ms Demetriou is responding to a
17 question I asked.

18 MR WARD: She referred to this yesterday as well, I
19 noticed, unsolicited.

20 THE CHAIRMAN: As I understand the exercise we are going
21 through at the moment, I have asked Ms Demetriou a
22 question, which I have put a proposition which she
23 say she does not think is right. She has given me
24 an indication of that. I rather suspect that is
25 something Mr Schiller is going to be cross-examined

1 on.

2 MR WARD: He will certainly be cross-examined on his
3 witness statement in these proceedings.

4 THE CHAIRMAN: In which he does, I think, talk about the
5 setting of the Commission in 2008.

6 MR WARD: He does indeed. I put a marker down now that
7 if it is going to be Apple's case in closing that we
8 failed to challenge something he said in Australia
9 rather than what is in his proof in these
10 proceedings, they really need to say so. We can
11 fight that out.

12 THE CHAIRMAN: It is a marker.

13 MS DEMETRIOU: I think we should pick this up at a
14 different point because I do think that if this is
15 something that Mr Ward wants to dispute, he ought to
16 put to it Mr Schiller, because there are no
17 contemporaneous documents and this is what he said
18 in the Australian Proceedings. I am not trawling
19 through the transcript.

20 MR WARD: That is a separate point.

21 MS DEMETRIOU: We can deal with it separately.

22 THE CHAIRMAN: I think let us park it for now. We DO NOT
23 need to go down this rabbit hole. Maybe there is a
24 rabbit hole we need to go down, but I do not want to
25 go down it now.

1 MS DEMETRIOU: So you have any point about the gap in
2 Dr Kent's case. It is the same gap that we
3 identified at our strike-out application and we say
4 that she has failed to fix it. Now, Dr Kent fails
5 to engage at all with the enormous revenues made by
6 developers through the App Store, and I have shown
7 the Tribunal some of the figures in Professor Hitt's
8 second report. Most of these revenues are not
9 subject to commission at all, yet they are obtained
10 through using Apple's tools and technology and the
11 iOS ecosystem. So you have our key point.

12 Now what is Dr Kent's response to this? You
13 heard my learned friend's submissions yesterday.
14 Aside from trying to argue that it is somehow an
15 abuse of process for Apple to make these
16 submissions, my learned friends made two main
17 points. The first was to invoke the willingness to
18 pay fallacy, which you may have noticed is something
19 of a mantra for Dr Kent. All this is saying is that
20 the court should not necessarily assume that the
21 price developers pay Apple corresponds to what the
22 product is worth. But that proposition, it cannot
23 always be the case that what developers are willing
24 to pay does not correspond to what the product is
25 worth because if that were right, then every

1 dominant undertaking would be charging an unfair
2 price.

3 The argument is entirely negative. So it is
4 saying, "Be cautious, Tribunal, not to equate what
5 is being paid with economic value", but it is not
6 actually grappling positively with the economic
7 value issue.

8 The second point that my learned friends made
9 was to say that it is for Apple and not Dr Kent to
10 justify the price it charges on the basis that it
11 accords with demand side value. You will recall
12 that Mr Armitage sought to argue that the evidential
13 burden shifts to Apple because the evidence is in
14 its possession. Again this is, with respect,
15 nonsense. The burden of proof lies squarely on
16 Dr Kent to show that there is no reasonable
17 proportion between the Commission and the economic
18 value of Apple's product. In all of the many
19 excessive pricing authorities that my learned
20 friend, Mr Armitage, took you to, not one
21 establishes the proposition that he is seeking to
22 persuade the Tribunal to accept.

23 What he did do was try to draw an analogy with
24 pass-on and he referred the Tribunal to Sainsbury's
25 in the Supreme Court. But that analogy is

1 inapposite. In that case the Supreme Court had
2 already found that an overcharge would prima facie
3 establish loss on the part of the claimants. The
4 card schemes then sought to rebut this with the
5 defence of pass-on. The Supreme Court held that as
6 the evidence was exclusively in the hands of the
7 merchant claimants and concerned the recovery of
8 their costs through their own businesses, within
9 their own businesses, they had a heavy evidential
10 burden. So they had to produce the evidence.

11 Contrast the position here. It is not the case
12 here that this evidence is exclusively in the hands
13 of Apple. We are talking about demand side value,
14 i.e. value to developers. That is not in Apple's
15 hands because it is information pertaining to
16 developers. It was open to Dr Kent to seek
17 disclosure from developers in order to make a case
18 on this, but she has just ignored the issue.

19 We go further than that because we say even
20 where one is in a case concerning pass-on or
21 mitigation of loss, so not this case, the idea of a
22 heavy evidential burden has limits. Can I just show
23 you the Court of Appeal in *Stellantis*, so
24 {AB3/46/16}. In fact, it is the next page. Can I
25 ask you to read paragraph 53 from the sentence, "The

1 reference to the heavy 'evidential' burden)".

2 So it is a description of the burden that
3 disclosure would impose, were it to be ordered, but
4 it is not an indication that the legal burden of
5 proof shifts once the Defendants has raised a point.
6 There has been no suggestion in this case that Apple
7 has failed at all to give disclosure on the question
8 of economic value, so it is not the case that
9 Dr Kent has sought disclosure from Apple and then
10 said, "Apple has failed to discharge its evidential
11 burden." Of course, lack of proportion with
12 economic value is at the heart of the alleged
13 infringements. So it is obviously not right that a
14 Class Representative can simply assert unfair
15 pricing and then say, "The burden now shifts to the
16 Defendants to disprove it."

17 So that is the first overarching submission. I
18 will be much quicker with the second one, which
19 relates to profitability because this really will be
20 tested in more detail in the evidence, but we say
21 there are major flaws with the profitability
22 analysis. Can I just identify some key ones, so
23 that the Tribunal has them mind. The first point I
24 wish to make is this. If we can turn to Mr Holt's
25 third report, {C2/10/63} and could you look at

1 paragraph 145. This is in the profitability section
2 of Mr Holt's report, so we are looking at Limb 1.
3 He is looking here at comparing a firm's ROCE with
4 its WACC, and he says that:

5 "In a market characterised by effective
6 competition, any excess returns above the WACC would
7 be expected to be eroded over time."

8 That is really the premise for Dr Kent using
9 the profitability analysis to establish excessive
10 pricing. However, what Mr Holt then accepts as a
11 result of his comparator analysis, as Mr Ward said
12 in his submissions, is that a commission in the
13 range of 10-20 per cent with 15 per cent as the
14 central estimate is a competitive commission. Now
15 if Apple charged a 15 per cent commission, which is
16 what Mr Holt says would be a competitive commission,
17 Mr Dudney says that Apple's ROCE would still have
18 been 257 per cent, which is obviously many times
19 larger than Apple's WACC.

20 MR WARD: Are these figures now non-confidential? I was
21 careful not to read any yesterday.

22 MS DEMETRIOU: They are not marked confidential in the
23 report. I have been quite careful about that but if
24 Mr Ward thinks I am saying anything that is marked
25 confidential --

1 MR WARD: It is your confidentiality.

2 MS DEMETRIOU: It is not marked confidential.

3 Now Mr Dudney says that Apple's WACC is around
4 10 per cent. So he says, taking the 15 per cent
5 central estimate, Mr Dudney says that Apple's ROCE
6 would have been 257 per cent. If Apple charged
7 20 per cent, still in Mr Holt's competitive range,
8 then its ROCE would have been even higher and
9 essentially indistinguishable from its actual
10 levels. What this means is that whatever the
11 position may be for other markets like generic
12 pharmaceuticals, Mr Holt accepts for this market,
13 that a competitive price can produce a ROCE that is
14 very, very far in excess of WACC. That was a point
15 indeed that Mr Ward sought to pray in aid during his
16 opening submissions. He says that Mr Holt
17 recognises that it is legitimate for Apple to earn
18 many multiples of its WACC. But the problem with
19 that position is that it acknowledges a complete
20 disconnect between the profitability analysis and
21 the question that the Tribunal has to answer, is the
22 Commission unfair? Because if a ROCE of 200 or
23 300 per cent is okay, why is a ROCE of 400 per cent
24 abusive? It is completely untethered from the
25 question of costs.

1 Where this all leads to is that Mr Holt's
2 conclusion rests in reality on his comparator
3 analysis, which is deficient for the reasons I have
4 already given, because it does not take account
5 properly of economic value.

6 The second point that I just wish to flag at
7 this stage is that the profitability analysis
8 depends on allocating costs to the App Store, which
9 you have the gist of our submissions on that, we say
10 that that is a meaningless exercise because the
11 product is an integrated one. That will no doubt be
12 explored in the evidence. The third point I wish to
13 make is that Mr Dudney seeks to allocate cost to the
14 App Store in proportion to the revenues achieved by
15 the App Store, but it is a particularly unsuitable
16 approach in this context because Mr Dudney does not
17 include in the revenues for the App Store any of the
18 vast revenues that are achieved by apps which are
19 free and which are monetised through advertising.
20 That includes the vast majority of activity on the
21 App Store and some very large developers such as
22 Meta, Facebook and Instagram and Google. So the
23 consequence of this approach is that Mr Dudney does
24 not allocate any costs or assets to the App Store in
25 respect to the vast majority of the activity on it.

1 Further, because of the revenues that Apple
2 collects on the App Store are so modest, reflecting
3 only a small fraction of the value that Apple
4 creates, a revenue approach only allocates a very
5 small percentage of Apple's OPEX to the App Store,
6 and that small allocation gives a false impression
7 of the profitability of the App Store. It
8 exaggerates it.

9 A further problem with Mr Dudney's work on
10 profitability is that in the balance sheet that he
11 constructs for the App Store, he omits the most
12 valuable assets that Apple has and it uses, and by
13 that I mean its intangible assets like its
14 intellectual property and its brand. As I say,
15 these and other flaws in Mr Dudney's analysis will
16 be explored during the course of the trial, but they
17 only go to underline the inappropriateness of
18 seeking to demonstrate, in this case, a pricing
19 abuse by comparing revenues to cost.

20 Before finally handing back to Mr Kennelly,
21 there is one issue that I would like to pick up.
22 You will recall that Mr Ward took you to annex C of
23 the CMA's market study, where the CMA reported the
24 conclusions of an analysis it had carried out in
25 relation to the profitability of Apple's business as

1 a whole, Apple Inc, and Mr Ward sought to rely on
2 it. The point I just want to flag is that neither
3 Mr Dudney nor Mr Holt carry out such an analysis in
4 their expert reports and it is hard to see where it
5 goes because Dr Kent accepts that Apple is not
6 dominant in any devices market. So it follows that
7 whatever ROCE Apple is earning is being earned in
8 conditions of workable competition. Even if Dr Kent
9 did not accept that, you have just seen from
10 Mr Holt's evidence that Dr Kent accepts that a
11 competitive price in the App Store can be consistent
12 with ROCE as high as 300 per cent. Nobody has put
13 forward any evidence on what a competitive ROCE in
14 the devices market would be, if not the actual ROCE
15 that Apple earns from competing. So we are unable
16 to challenge the conclusions of the CMA.

17 Can I just ask the Tribunal to contrast the
18 position that would arise had the CMA taken a CA-98
19 decision and reached the same conclusion, and then
20 Apple appealed to this Tribunal. The CMA would have
21 had to have called an economist as a witness at the
22 appeal before the Tribunal who could have been
23 cross-examined on the analysis, and the analysis
24 itself would have been before the Tribunal. It
25 would have been tested through cross-examination.

1 The reason I raise this point is that it is
2 illustrative of the more general point I made
3 yesterday. We have thousands of pages of expert
4 evidence from the actual experts in these
5 proceedings and it cannot be right that Dr Kent can
6 just import the conclusions reached by regulators on
7 other issues that nobody has investigated and then
8 ask us to disprove them at this trial. It was open
9 to Dr Kent to plead a case on Apple's profitability
10 in the devices market and then instruct her experts
11 to consider that issue for themselves and if they
12 wanted to, to replicate the work the CMA did on that
13 topic and then we could have cross-examined them at
14 this trial. But it is not open to it to point to
15 conclusions of the CMA and say to the Tribunal, "The
16 Tribunal must adopt them unless we somehow disprove
17 them." The reason I raise it is because it is
18 illustrative of the more general point I made
19 yesterday about the use that should and should not
20 be made of these materials.

21 That is all from me on unfair pricing.

22 Mr Kennelly is going to address you on incidence.

23 Submissions by Mr Kennelly.

24 MR KENNELLY: So at this stage of the saga Dr Kent needs
25 to have shown that developers would have paid less

1 on a quality adjusted basis in the counterfactual.
2 We say that she never reaches that stage for the
3 reasons that both myself and Ms Demetriou have
4 developed. But even then Dr Kent has failed to show
5 that developers would have passed on those savings
6 to consumers.

7 As a matter of law, and from my learned friends
8 it appears to be common ground that the burden lies
9 on Dr Kent to show some pass-on of those savings, to
10 show that some pass-on would have taken place and to
11 show that on the balance of probabilities. It is
12 also common ground that once Dr Kent has shown that
13 the extent of any pass-on will be determined by the
14 Tribunal as best it can using the broad axe as
15 appropriate.

16 As you saw when my learned friend Mr Armitage
17 took you to the *Guttman* case in the Court of Appeal,
18 the extent to which the Tribunal needs to use the
19 broad axe will depend upon the quality of the
20 evidence that you get from the trial. In this case,
21 we say you are faced with a clear choice in terms of
22 the quality of the evidence before you on this
23 question of incidence. Because from Apple there is,
24 contrary to my learned friend's submission,
25 empirical evidence, real empirical evidence

1 including regression analysis on actual transaction
2 data, showing that developers did not, in fact, pass
3 on commission reductions which took place during the
4 claim period and which strongly suggests that that
5 they would not have passed on Dr Kent's claim
6 savings to iOS devices either. From Dr Kent, we say
7 you are offered theory, economic theory which is
8 untethered from the facts of these markets.

9 Just to summarise the first of those and what
10 Apple is offering you through Professor Hitt. There
11 were four times when Apple's commission rates have
12 decreased and Professor Hitt considers each of them.
13 Could I show you please {C3/4/233}. You see in
14 Exhibit 35 the four examples, the "Small Business
15 Program", the "Auto-Renewing Subscription Policy",
16 the "Video Partner Program" and the "News Partner
17 Program". For each of these, we know that there
18 were commission reductions. For the Small Business
19 Program there was a 15 per cent, the Commission was
20 dropped to 15 per cent for developers with less than
21 a million dollars in revenue. For Auto-Renewing it
22 dropped to 15 per cent after the first year. News
23 Partner Program, the Commission was 15 per cent if
24 the developer provided content to Apple news and the
25 Video Partner Program again dropped to 15 per cent

1 if the content was integrated into Apple TV.

2 THE CHAIRMAN: Mr Kennelly, do you accept that these
3 figures deal with the first point, which is that on
4 the balance of probability there has been some
5 pass-on, is that contested in light of these
6 figures?

7 MR KENNELLY: Yes, we accept and -- sorry, we contest
8 that these figures confirm that there has been some
9 pass-on. We contest that.

10 THE CHAIRMAN: Right, so Professor Hitt is telling us
11 that he has done some regression analysis that shows
12 there has been, in the case of the Small Business
13 Program, in respect of the Video Partner Program.

14 MR KENNELLY: No, no, on the contrary. Sorry, if you
15 just allow me to take you through this, he is
16 showing that there have been reductions in the
17 Commission under each of these headings, and then he
18 looks to see what impact these reductions on the
19 Commission had in the developers who benefitted from
20 them.

21 THE CHAIRMAN: Does this not show that some of them did
22 smaller numbers in that case?

23 DR BISHOP: 68 per cent did not --

24 MR KENNELLY: No, no, I am afraid you have to bear with
25 me because he actually looks to see who reduced

1 prices and who raised prices after this and his
2 conclusion is that the figures do not show that they
3 reduced prices, or even where they reduced prices,
4 that they did that because of the reduction in
5 commission.

6 Again just to slow down for a second, the
7 analysis which Professor Hitt undertook here was to
8 undertake a simple examination of what proportion of
9 developers reduced their prices after entering the
10 programme and compare that with the proportion that
11 increased their prices, what kept them steady.

12 That is what you see if you go to page 235.
13 235, Exhibit 36, again we are looking here at the --
14 because he does what he can with each of those
15 instances in which commission was reduced and here
16 we are looking at the Small Business Program, and
17 you see his conclusion:

18 "For the vast majority of products, app
19 developers that enrolled in the SBP did not reduce
20 prices in response to reduced commission rates."

21 Because he notes their reduction in commission
22 rates, commission rates charged by Apple, and then
23 he sees the percentage of developers that reduced
24 their prices and you see that in the second column.
25 The developers that made no change in prices and the

1 developers that increased their prices in the period
2 after the change in commission rates. He notes that
3 the percentage --

4 THE CHAIRMAN: Sorry, Mr Kennelly, I did not mean to
5 interrupt you. I mean, maybe I am missing something
6 but does the second column not illustrate that, is
7 that not the remainder, so not the vast majority.
8 The figures are confidential, are they not?

9 MR KENNELLY: No, these percentages are not confidential.

10 THE CHAIRMAN: So the 13 per cent is the opposite of the
11 vast majority, it is those people who, according to
12 this table, are app developers that did reduce their
13 prices in response to reduced commission rates. Is
14 that not pass-on? Am I missing something?

15 MR KENNELLY: No, the question is why, why do they reduce
16 their price?

17 THE CHAIRMAN: He says in response to reduced commission
18 rates. That is what he says in his table, in his
19 exhibit.

20 MR KENNELLY: No. He is saying that -- no doubt he can
21 be tested on this in cross-examination. There may
22 be some verbal infelicity.

23 THE CHAIRMAN: Maybe I should stop bothering you. We
24 will let him deal with it. I just had misunderstood
25 completely, I think, what was going on.

1 MR KENNELLY: Because in fact when you come to look at
2 the report and he will be tested on this, what he
3 infers from this, in fact, is that because the
4 percentage of developers who increased their prices
5 is actually greater than the percentage that reduced
6 them and in view of the percentage that made no
7 change, he suggests that even for those who
8 decreased their prices, the 13 per cent that
9 decreased them, that was probably not because of the
10 reduction in commission. That was not passing on
11 the Commission reduction. That is a coincidence,
12 they happened to decrease their prices in the period
13 after entering into the programme, but he says you
14 cannot infer -- this is why it is important just to
15 bear with Professor Hitt. Simply because some small
16 minority, in fact, reduced prices when the
17 Commission dropped does not mean they did it because
18 the Commission dropped. One has to look at what the
19 other developers did, increased their prices or keep
20 them the same.

21 THE CHAIRMAN: I think I am sure it will all come out. I
22 have to say I thought it was being presented to us
23 as econometric analysis that demonstrated the
24 linkage between the change in commission and the
25 change in prices. That is not the case, I am sorry.

1 MR KENNELLY: That is definitely not the case.

2 Definitely not the case. Professor Hitt is offering
3 you the percentages and he says, in terms, that
4 because more increased rather than decreased and
5 because a substantial proportion did not change, he
6 then asks what he can infer in relation to those
7 that did decrease and he says, "One cannot then
8 attribute that to the reduction in commission, there
9 must be other reasons for that." To the extent that
10 his own text below the heading is unclear, well I am
11 sure that will be explored with him and he can
12 clarify that himself in evidence in the hot tub.

13 THE CHAIRMAN: Yes.

14 MR KENNELLY: That was not the only analysis that was
15 done. He went on to explain at paragraph 437, if
16 you go on in the report to page 239. There is no
17 need to take you through this in detail but this is
18 the second stage. He did a formal difference in
19 differences regression analysis which enabled him to
20 measure the causal impact of the reduction in
21 commission on price, again looking only at the Small
22 Business Program using some control groups and again
23 he found that the reduction in commission did not
24 cause developers to reduce their prices.

25 He does the same kind of analysis for the

1 Auto-Renewing Subscription Program and he gets the
2 same results. There is admittedly less data for the
3 News Partner Program and the Video Partner Program,
4 but he still conducts a simple analysis of the data
5 and finds that most did not reduce prices after
6 entering the programme. He draws the same inference
7 from that. That is not him saying that those that
8 did reduce prices did so because of the programme
9 that is the opposite of the finding that he reaches.

10 We say, taken together, based upon his analysis
11 of the empirical evidence, this is strong empirical
12 evidence that if Apple had charged lower commissions
13 in the counterfactual, developers would not have
14 charged lower prices to any material extent.

15 Dr Kent challenges that empirical evidence in
16 various ways and that will be explored in evidence,
17 but the only empirical evidence that Dr Kent offers
18 us is the effects of a 2015 EU decision that had the
19 effect of increasing VAT on App Store transactions
20 in the UK by 5 percentage points. Apple increased
21 its App Store price tiers as a result of that
22 change. But this is not an example of developer
23 pass-on because the increase was a decision by Apple
24 in respect of its price tiers. That tells you
25 nothing about the developers' decisions regarding

1 their own prices. Just to recall, you will see this
2 again with Mr Owens and Mr Burelli, the way that
3 Apple's price tiers work is that a developer can
4 choose a single price tier for, usually the country
5 with which the developer is most familiar, and then
6 Apple will automatically charge the price
7 corresponding to that price tier in every other
8 country in which the developer wants to offer its
9 app, it is a very valuable service that Apple
10 offers. The idea is to set the price tiers to
11 equalise those prices in rough terms on a pre-tax
12 basis. So when there are large changes in foreign
13 exchange or local taxes in a particular country,
14 Apple adjusts the tiers. That means the developer
15 does not need to do that manually, does not need to
16 worry about that.

17 We say that Apple's process of automatically
18 adjusting local prices for tax and *FX* tells us
19 nothing about the decision developers would make if
20 Apple cut its commission.

21 That is it on the empirical analysis that
22 Dr Kent offers us. So what do we get instead from
23 her? She uses, through her experts, what the
24 European Commission refers to as a simulation
25 method, to estimate the rate of incidence. This is

1 why we say it is pure economic theory. The first
2 simulation model involves linear demand and as we
3 heard from my learned friends, they say that
4 economic theory tells us that whenever firms face
5 linear demand, in any market, they pass on costs at
6 a rate of 50 per cent. Some of this will be, will
7 have a horrible Pavlovian reaction in the Chairman.

8 His second simulation model involves a
9 different demand system called logit. He says that
10 economic theory tells us that whenever firms face
11 logit demand in any market, they pass on costs at a
12 rate equal to 1 minus market share, which we were
13 told calculates to be roughly 90 per cent across the
14 App Store.

15 Without attempting to estimate any relationship
16 between price and cost at all, Dr Singer can tell us
17 with sufficient confidence to persuade the Tribunal
18 to award potentially hundreds of millions of pounds
19 in damages, that the answer is either 50 per cent or
20 90 per cent. How is the Tribunal supposed to even
21 choose between 50 per cent and 90 per cent.

22 By reference to the shudder that the Chairman
23 and I shared, if it was as simple as this, then why
24 did we need the pass-on trial in interchange? If
25 all that was needed was to decide, for every

1 industry in the country, they face roughly linear
2 demand and say the answer is 50 per cent, or say
3 every industry in the country faces roughly logit
4 demand and therefore it is 1 minus market share.
5 There would be no need to look at the relationship
6 between price and costs whether by sector or sector
7 or Class Representative by Class Representative. We
8 say that which is obvious, that this is not an
9 acceptable approach.

10 Even if in some situations one relies on a pure
11 theory where there is an absence of data, Dr Kent
12 does not have that excuse. Here there is an
13 embarrassment of data. The Class Representative has
14 had access to an extraordinarily rich transaction
15 level data set for several years and, of course, if
16 Dr Kent did not like our natural experiments based
17 on facts, it was open to them to try other empirical
18 methods to tease out a pass-on rate, like we often
19 see in competition damages cases. But that is not
20 what that they did. Obviously, in cross-examination
21 we will explore the extent to which Dr Singer's
22 theoretical analysis is also flawed on its own
23 terms, but that is for another day.

24 Finally, my learned friend Mr Ward relied on
25 some Commission conclusions from the *Spotify*

1 decision. In something which may become a theme
2 throughout this trial, those conclusions were relied
3 on without any exploration of whatever analysis
4 underpinned them and that will have to be put to
5 Professor Hitt if he wishes to make any reliance on
6 it. We do not accept that the Commission's analysis
7 establishes pass-on.

8 In any event, two points about *Spotify*. The
9 Tribunal has the point that *Spotify* has not accepted
10 transactions on iOS since 2016. So it makes it
11 virtually none of the commerce and as you know now,
12 music streaming apps have very different
13 characteristics from other apps, and even
14 collectively they account for a small fraction of
15 the commerce. We say, you cannot rely, as the Class
16 Representative appears to do, to rely on a
17 Commission decision for one tiny subset of quite
18 distinctive developers and say, "Now that is all we
19 need to show."

20 So we say, as far as incidence is concerned,
21 Dr Kent has failed to prove her case and she has
22 given you nothing with which you can quantify loss,
23 even if she had established any. We say, on the
24 contrary, the empirical evidence points the other
25 way.

1 So unless I have missed something or I can be
2 of any further assistance those are the submissions
3 on incidence.

4 Forgive me, of course we have the Hitt issue.

5 THE CHAIRMAN: And indeed Dr Singer 4. So shall we do
6 that now? I am conscious the transcriber has not
7 had a break but if he is happy to go through to a
8 quarter past that would be quite helpful. Sorry
9 about, I hope that is acceptable. We have got both
10 of these reports to deal with. I think we will
11 start with Dr Singer and just work out what the
12 objection is and whether there is. As I indicated
13 yesterday, I do not accept there is any necessary
14 linkage between Dr Singer and Professor Hitt, maybe
15 the other way around because of responsiveness but
16 as far as Dr Singer is concerned, either he gets it
17 on the basis of the discussion that took place at
18 the PTR or he does not. He was given, I think, a
19 fairly open goal to respond to the points that were
20 raised by Mr Ward.

21 It may be, Mr Ward, unless you want to say
22 anything that we should just see what it is.

23 MR WARD: Yes. I mean, I explained yesterday why the
24 report was adduced. I explained yesterday that
25 Apple made clear it would object if there was

1 something irrelevant or disproportionate, and I
2 explained yesterday it did not object at all until
3 Saturday when it sought a horse trade, and as you
4 know we do not accept the horse trade because we
5 think Professor Hitt's fourth report is
6 inadmissible. But I am happy to deal with it in
7 whatever way is most convenient, sir.

8 THE CHAIRMAN: Mr Piccinin, yes?

9 Submissions by MR PICCININ

10 MR PICCININ: Sir, if I may, I would just like to start
11 by taking us back through the chronology of this and
12 I will deal with Dr Singer first and Professor Hitt
13 second.

14 THE CHAIRMAN: You need to be quick because we need to be
15 done by quarter past. I think we are fairly
16 familiar with the chronology but by all means if you
17 need to do that, but do not dally.

18 MR PICCININ: I do not think it is going to be possible
19 to do it in five minutes, sir.

20 THE CHAIRMAN: I am not asking you to do it in five
21 minutes. We need to be finished by quarter past.

22 MR PICCININ: Okay. If we could start with the joint
23 statement which is at {C4/7/6}. You can see the
24 date there, this was filed on 25 October 2024. Let
25 us look at the specific points that Dr Singer said

1 he actually needed to address. If we could just go
2 to page 20 {C4/7/20} quickly. You can see that in
3 the proposition 44, at the bottom, what Dr Singer
4 says he needs to respond to is the specific new
5 analysis that is included in the appendix to his
6 report that you saw yesterday. I just point over to
7 the right-hand column. You can see what that was.
8 It was just a short point that there was no change
9 in the trends of iOS downloads of Netflix as between
10 15 months before and after Netflix stopped using
11 IAP. But importantly, that was not something
12 entirely new that Professor Hitt just introduced
13 into the case spontaneously. This was his first
14 opportunity to make that point in response to what
15 Dr Singer had said in his reply report. Because of
16 course we have had simultaneous exchange reports.

17 That is the first point. If we go on to page
18 35, you have proposition 88 at the bottom, and the
19 issue is the one that you are familiar with, which
20 is whether the logit model that Dr Singer uses
21 satisfies the IIA properly which it needs to do.

22 Over the page, you can see looking at the
23 right-hand side, second paragraph, that this
24 question of whether it satisfies the IIA properly or
25 not was not a new issue in the case. In fact,

1 Dr Singer had said in Singer 1, in his very first
2 report, that he was going to test for it in his
3 substantive report and he just had not done that.

4 Then in the third paragraph under there on the
5 right-hand side of the page, you can see that
6 Professor Hitt cites to some of his pre-existing
7 analysis on that issue, but he also introduced a new
8 piece of analysis, which is a formal statistical
9 test. You can see that it is that, on the left-hand
10 side at the top of the page that we can see right
11 now, it is that that Dr Singer said he needed to
12 address in a further report.

13 Now, you might wonder why Professor Hitt
14 conducted a new analysis on this issue instead of
15 just leaving the reports where they stood at that
16 point. Dr Singer somewhat gives the impression here
17 that he was ambushed with this new test and he does
18 likewise in Singer 4, and that is a further issue of
19 some concern to us. If I can just show you what
20 Professor Hitt has said about that. If we could go
21 to {C3/9/18}.

22 CHAIRMAN: This the fourth report?

23 MR PICCININ: This is the fourth report. There is not
24 going to be anything substantive in there that you
25 are going to need to get afterwards. If you just

1 read 19(a) .

2 THE CHAIRMAN: Does any of this really matter,
3 Mr Piccinin? We got to the position in November
4 where it seems that the obvious thing to do was to
5 allow Dr Singer to deal with it.

6 MR PICCININ: I am actually going to show you what he has
7 done now because he has done far, far more than just
8 respond to those points. We have no objection to
9 him responding to those points as long as we are
10 able to deal with it fairly, but what he has done in
11 Singer 4 goes far, far beyond that. That is what I
12 was going to show you next. This was 25 October, as
13 we have just said, then we had the full PTR, a full
14 three weeks later than that, at which we still did
15 not have a draft of Singer 4. All we were told by
16 Mr Ward was that there was going to be a Singer 4
17 coming, that was going to deal with a couple of
18 pages, not even, of text that you have already seen
19 in the joint expert statement. That is what we were
20 expecting. The report actually came on 21 November,
21 so that is a full four weeks after the joint expert
22 statement. All he was responding to was a couple of
23 pages, and he has produced a 12-page report over the
24 course of four weeks and just before Thanksgiving as
25 well.

1 If we can look at it now and I will show you
2 what it covers and what does and what does not
3 relate to the proper issues. If we go to {C2/17/2},
4 so pages 2 to 4 deal with the Netflix issue, and you
5 can see this is dealt with at a much greater length
6 than Professor Hitt was able to do in the joint
7 statement. If you go to page 4, the key point that
8 Dr Singer makes is that he wants to extend the
9 analysis back not just 15 months but back to two
10 years before Netflix's change. That is what he says
11 about incidence.

12 THE CHAIRMAN: Is there a problem with any of that?

13 Because, as I understand it, Professor Hitt has said
14 here is my analysis --

15 MR PICCININ: Sir, if I can just cut it short there is no
16 problem with any of that.

17 THE CHAIRMAN: You do not object to it?

18 MR PICCININ: We do not object to it although we do say
19 Professor Hitt should be given an opportunity to
20 respond to it.

21 THE CHAIRMAN: We can come back to that.

22 MR PICCININ: We can come back to that.

23 THE CHAIRMAN: But in terms of their position that is
24 fine.

25 MR PICCININ: That's right. Then from page 4 to 13

1 Dr Singer embarks on an extended discussion of
2 issues related, broadly speaking, to incidence. But
3 this ranges far, far more widely than the issue of
4 the IIA property, let alone the tests in his model.
5 If I can show you some examples, sir.

6 THE CHAIRMAN: Yes.

7 MR PICCININ: On page 5, paragraph 7 he discusses what he
8 calls the direct test of incidence in relation to
9 the passing on of VAT, which my learned friend
10 Mr Kennelly just addressed you on. That has nothing
11 to do with his logit model at all, let alone the IIA
12 property. Still in paragraph 7, five lines down,
13 Dr Singer also gives evidence that economic theory
14 posits that in the long run incidence would be
15 between 50-100 per cent, and again that has nothing
16 to do with his logit model at all.

17 THE CHAIRMAN: Again he is just summarising the evidence.
18 None of this is terribly exciting, is it?

19 MR PICCININ: That is an additional proposition, that
20 economic theory has a general range to pass-on which
21 is between 50 to 100 per cent, which we absolutely
22 do not accept. So sir, you can see that this is
23 going beyond what is in, what is responsive to the
24 two points --

25 THE CHAIRMAN: What would be helpful, we can argue about

1 things that may or may go beyond, but it is about
2 things that matter, it is about things where you
3 think that -- it does not really matter that he has
4 put in a sentence whether this is between 50 and 100
5 per cent. He is setting out the background before
6 he gets into it, is he not? If you really object to
7 that, then fine let us think about whether it stays
8 in or not. I do not want to argue about the nuance
9 here. I want to know what you really object to and
10 I would like to do it as quickly as possible.

11 MR PICCININ: Sir, our position is not that anything
12 should be kept out. Our position is that we need an
13 opportunity to respond to this that is all.

14 THE CHAIRMAN: As I said to you, this is not an exercise
15 in conditionality. Either you accept this goes in
16 or it does not and if you accept it does not, it is
17 justified, and then we will deal with that. But the
18 reason for doing that is that you have not raised
19 this issue at any point before Saturday, and I think
20 you have foregone the opportunity to try and argue
21 that somehow there is some nuance that needs to be
22 dealt with here. We have got to deal with this in
23 series, so this goes in or it does not. I am open
24 to submission that you say there are things in here
25 that are definitely not within the original ambit

1 that Mr Ward sought permission for, and if you want
2 to make those arguments fine let us have them. That
3 is that exercise and it is compartmentalised with
4 an expert.

5 MR PICCININ: It is just my submissions on the next issue
6 are fundamentally the same because what I need to do
7 is show you what is said in Singer 4 and then show
8 you how they relate to what is said in Hitt 4.

9 THE CHAIRMAN: Fine but just to cut the chase, if what
10 you are saying here is that you are not objecting to
11 this going in, on the basis that I am not allowing
12 you to attach a condition to it, the question is on
13 its merits does it go in or not?

14 MR PICCININ: Can I just take instructions for a moment?
15 Sir, it has just been pointed out to me that we
16 always reserved our position on the acceptance of
17 this report.

18 THE CHAIRMAN: You did, but you saw the report on 21
19 November and did not think fit to raise an issue
20 with it until 10 or 11 January. That is the
21 problem, Mr Piccinin. If this was all happening on
22 28 November, I think you would be in a much
23 different position. I just do not think you can do
24 this now. If you wanted to say something about
25 this, we had skeletons exchanged and we read all

1 this stuff and you have not said anything about it
2 and we all assumed that you were not objecting to
3 it. I am not shutting the door to -- if you have a
4 legitimate objection, let us have it and it stays
5 out. But as I understand it, you are not advancing
6 one, so there is really no point in arguing about
7 whether you can condition this with -- connect this
8 with Hitt going in. There are different things
9 because they have got a very different temporal
10 circumstance.

11 MR PICCININ: Yes, sir, sorry. Sir, yes, I have
12 instructions, we do not oppose the admission of the
13 report. It is still helpful, I think, for me to
14 take you --

15 THE CHAIRMAN: It is, but we have to give some time for
16 Mr Ward to deal with this as well and we are running
17 short of time. If that is what you want it in --

18 MR PICCININ: We do in order to be helpful, sir, yes.

19 THE CHAIRMAN: This has been in the bundle, so we have
20 read it. It has been there obviously pro tem
21 because we did reserve the position, but we rather
22 assumed this was in for the reasons we have
23 discussed. I have looked at it before, I do not
24 think the other panel members have had the
25 opportunity to do that, but I do have a sense of

1 what is in there. In a way you can cut quite
2 quickly to Hitt 4. That needs to be your ...

3 MR PICCININ: Let us do that. Fundamentally, my
4 submission is that the material that is in Singer 4
5 is material that is useful for Professor Hitt to
6 comment on, and this is an appropriate way to do
7 that, so it does not ambush anybody when it comes
8 out in the box.

9 THE CHAIRMAN: What about the bits in Hitt 4 that are not
10 in response.

11 MR PICCININ: There is only one part that is not in
12 response, which is the *Spotify* decision. If I can
13 just explain how that came about, Sir. You will
14 recall in the run up to the PTR Dr Kent asked for us
15 to disclose new materials in relation to the *Spotify*
16 investigation. So we could immediately see when we
17 looked at what they were that they were relevant to
18 the issue of incidence, to that broad topic, and so
19 we thought again because those were materials that
20 Professor Hitt had not seen, and had not had an
21 opportunity to comment on, it was appropriate to
22 draw them to his attention so that he could consider
23 them, and if he had anything to say about them,
24 again do it in an orderly way, that would enable the
25 Tribunal and our opponents to understand what he has

1 to say. He has done that.

2 THE CHAIRMAN: So why is it that nobody said anything
3 about this until 10 January? That is immediately
4 apparent, why have we waited two months and why are
5 we now in a position where we are having to deal
6 with this in the middle of the trial?

7 MR PICCININ: I understand that concern, sir. The issue
8 is, as I said before, Singer 4 only arrived on 21
9 November, which was a considerable time after the
10 joint statement, and in a period where we were all
11 busy preparing our written submissions for trial,
12 and the amount of time that has passed since there
13 is seven weeks between that date and when we
14 provided the report.

15 THE CHAIRMAN: It is not just a question of it being
16 seven weeks, it is seven weeks leading up to a
17 trial, so why are we having it on the day before the
18 trial? I can understand there is lots going on, but
19 on the other hand it does rather smack of tactical
20 behaviour.

21 MR PICCININ: It certainly is not that, sir.

22 THE CHAIRMAN: It looks very like that, Mr Piccinin, and
23 documents that Professor Hitt turning up with what
24 is not just a critique of what Dr Singer says in
25 Singer 4, but also turning up with some new

1 analysis. So there are two bits in Hitt 4 where he
2 has performed new analysis, he has done a new Chow
3 test and he has done some more analysis that in
4 relation to --

5 MR PICCININ: Perhaps we should look at those because
6 they are wholly responsive to what is new in
7 Singer 4.

8 THE CHAIRMAN: They may be responsive but it is new
9 analysis, is it not? If it is new analysis
10 Dr Singer is going to say, "I need to look at it."

11 MR WARD: Sir, he already has of course.

12 THE CHAIRMAN: That is the problem, is it not,
13 Mr Piccinin? That is the problem with it arriving
14 the night before the trial starts, because we have
15 got a moving feast. This case has been managed, I
16 think, very well by all the parties and I hope by
17 the Tribunal because we have had everything in the
18 right place at the right time, and this is not --
19 and it creates a problem and it is not something
20 that I am keen to encourage, either in this case or
21 any case. It is not the way this litigation should
22 be run.

23 MR PICCININ: Sir, I think what I can say about that is
24 if you look at it in perspective, Dr Singer took
25 four weeks to respond to two pages of material from

1 the joint statement. Professor Hitt was then given
2 the period between then and trial.

3 THE CHAIRMAN: It is not even about, that is not what it
4 is about either because Mr Ward was telling us on 15
5 November that there was a problem and he wanted to
6 deal with it. We have had no indication of that
7 from your side.

8 MR PICCININ: I accept that, Sir, but at the same time it
9 is true that there is still a month to go before
10 Professor Hitt actually needs to be cross-examined
11 by Mr Ward.

12 THE CHAIRMAN: That is not really the point, though, is
13 it? Because for a start, who knows what relevance
14 this might have to factual evidence, I do not know.
15 You know, I do not know. Secondly, everybody is
16 busy doing cross-examination and a lot of your
17 witnesses need to be cross-examined by this side of
18 the court, that is where the bulk of the effort is.
19 Apart from the preparation for the
20 cross-examination, you are putting a burden,
21 creating a prejudice. That is because it has
22 arrived so late without any warning that is the
23 problem here.

24 MR PICCININ: Sir, I do not accept that it could have
25 been done materially quicker than it was done.

1 THE CHAIRMAN: It could have been indicated at least,
2 could it not?

3 MR PICCININ: That would not have made the burden any
4 easier.

5 THE CHAIRMAN: It might have done.

6 MR PICCININ: They would not have seen the material until
7 it arrived and it arrived when it was ready to
8 arrive.

9 THE CHAIRMAN: Let us see what the position is from the
10 Class Representative before we get into the details.
11 I would like to identify where the differences are
12 and you need to justify some bits, and we know what
13 is in dispute and then come back and ask you to deal
14 with it. A lot of this, I think, is really about
15 the ability of the Class Representative and
16 Dr Singer to deal with this sensibly. So if we may,
17 I might leave you here for the minute and come back
18 to you.

19 MR PICCININ: Sir, the one other very brief point is that
20 of course all of this can be dealt with in
21 cross-examination as well. So whether the material
22 is in or out, it can all come out in writing.

23 THE CHAIRMAN: That is why I make the point about the new
24 analysis because I do not think you are going to
25 find it that easy to cross-examine Dr Singer on the

1 new analysis, are you? The new Chow analysis, how
2 are you going to put that to Dr Singer?

3 MR PICCININ: On that I would like to show you a new
4 authority, if I may, which is one my learned friends
5 gave us before lunch, which is ^ BGL.

6 THE CHAIRMAN: Just before you do that, let us find out
7 what Mr Ward says then come back to you.

8 Submissions by MR WARD

9 MR WARD: Sir, the problem is the timing of all of this,
10 as you say. We have had an orderly process, it was
11 ordered I think in 2023, it slipped slightly but we
12 are all on course for trial. The joint expert
13 process was completed in October. Then we had the
14 written openings, the Tribunal has done its reading
15 in and then this pops out unheralded on Saturday.
16 In my respectful submission, it embodies a basic
17 flaw in Apple's thinking, which is that the experts
18 are entitled to carry on working up new analysis all
19 the way into the trial, rather than having an expert
20 process that crystallises the issues.

21 What I would like to do is just page turn this
22 document a little bit more closely. Would you mind,
23 please, turning up.

24 THE CHAIRMAN: Mr Ward, just so I am clear, are you
25 objecting to all of this?

1 MR WARD: Yes, I object to it in its entirety. I say it
2 is fundamentally wrong to serve a report like this
3 on the Saturday before trial begins. I can do that
4 by just itemising what is in it.

5 There is probably some material that is
6 anodyne, but the stuff that matters I object to.

7 THE CHAIRMAN: Why do you not pull those out as quickly
8 as you can.

9 MR WARD: Can I please take you towards the back of the
10 report first which is {C3/9/43}. It just gives you
11 an indication of the scale of this piece of work.
12 This is the documents relied on and it goes to the
13 next page as well if we could turn it. It is a
14 total of 60 items. It is 13 academic articles,
15 three books or articles, a data set, the existing
16 expert reports, four documents, nine public
17 materials and 14 web pages. That is not a short
18 rejoinder.

19 If we go to the actual content, we have firstly
20 pages 7 to 9, we have got the Netflix analysis. But
21 this is not just disagreeing with what Dr Singer
22 said. As you say, there is a new statistical test
23 that of course he will want to reply to.

24 Then on incidence there is remarkable material
25 where Dr Singer essentially accepts he is doing some

1 new analysis here -- Professor Hitt I am sorry.
2 Professor Hitt is doing analysis on Singer 2, where
3 he talks about at paragraph 11, I am sorry I do not
4 have the page numbers, page 14 I think. If we could
5 go to that. Paragraph 11. If you look on the last
6 four lines:

7 "Upon further investigation, it has come to
8 light that Dr Singer did not even run a correct
9 logit regression."

10 So he is talking about Singer 2. So the time
11 for replying to that was in the reply evidence of 15
12 September. Then if he had, of course, Dr Singer
13 could have had time to think about it, he could have
14 responded in an orderly way in the joint experts
15 statement. As you can see at a glance, at least to
16 the lay people, if you look at the next page it is
17 not simple stuff by any means. And the page after,
18 even if some of it is buried in a forensic footnote,
19 it is still complex analysis.

20 Then we get on to the IIA assumption where
21 there is an argument about one of the tests that
22 Professor Hitt -- sorry this is page 17, this is one
23 of the tests that Professor Hitt introduced during
24 the joint expert process, which by the way was
25 already too late for new material. The joint expert

1 process is often called "agree/disagree". It is
2 crystallising the existing issues, not pursuing
3 something new. But here doggedly and onward we go,
4 page 19 at (c), please, what we see is:

5 "Given Dr Singer has now said he is concerned
6 about the Stata warning, I have now implemented
7 another standard statistical test", which of course
8 is another thing that Dr Singer would obviously have
9 to consider.

10 Then we get to *Spotify*, please if we turn to
11 page 27, where there are some very generous
12 confidentiality redactions so I am going to be
13 careful. Sorry I have given the wrong page, 21. So
14 this is a section on the *Spotify* report. Now, there
15 is a very important thing to know by way of context
16 here. Dr Singer referred to *Spotify* in his May
17 report, 14 May 2024. Professor Hitt, in his reply
18 report, completely ignored it for the purposes of
19 his incidence analysis. Here he is having a second
20 bite at the cherry. Now I know it is said that part
21 of the reason for this is further disclosure, but
22 the *Spotify* decision was well in play by May. Then
23 the parts that are redacted I will describe without
24 reading out, are an attempt by Professor Hitt to
25 adopt the views of an entirely separate set of

1 experts. I think I can be allowed to say what those
2 experts were doing without talking about the content
3 of them. If you look in footnote 74 you can see
4 their identity, it is quite a familiar name there,
5 at least the first one. If you look at footnote 74,
6 you can see who this is. I am sure you know the
7 first name if not the second.

8 THE CHAIRMAN: So what are you saying?

9 MR WARD: This is expert material, I am going to go
10 slowly in case someone jumps up, adduced by Apple in
11 the investigation.

12 THE CHAIRMAN: These are experts in the *Spotify*?

13 MR WARD: Yes.

14 THE CHAIRMAN: Was this the disclosure that came at the
15 end of --

16 MR WARD: Yes, but it was Apple's disclosure. Apple have
17 had this since whenever they commissioned this work.
18 What we have here is Professor Hitt seeking to adopt
19 work by other experts not instructed, not here, that
20 we cannot cross-examine or ask any questions of and
21 we do not even know if those experts were acting as
22 independent experts or consultants, as is often the
23 case in these kind of investigations. You hire
24 consultants, so they are not bound by the sorts of
25 duties to the court that are supposedly important in

1 these kind of proceedings. But it is obviously not
2 acceptable on the Saturday before trial to say,
3 "Look there is this expert report by someone else
4 that is in the disclosure and I would like to rely
5 on it too." That is putting a completely
6 unreasonable burden upon us. Those particular
7 experts are not in front of us and again the
8 opportunity to comment on the *Spotify* decision was
9 when Dr Singer raised it in his second report,
10 Professor Hitt put in his reply report in September
11 on an orderly basis, and if he disagreed with what
12 Dr Singer had said, rather than ignoring it
13 completely, which is what happened, he could have
14 said so then and they could have discussed it in the
15 joint expert process.

16 Sir, that is the substance of this report and
17 that is why we invite you to reject it in its
18 entirety.

19 THE CHAIRMAN: Mr Piccinin, how do you want to deal with
20 this because we are going to take a break now and we
21 are going to start the CMA at 3.30. We obviously
22 need to deal with this, and I want you to have
23 proper time to deal with it. We are not going to do
24 that now.

25 I do not know whether it is helpful. We can

1 try and start again at 4.30 when Mr Gregory has
2 finished, but I do not think that is fair on
3 anybody. We can start early tomorrow morning.

4 MR PICCININ: That is fine by me.

5 THE CHAIRMAN: It would be helpful I think whether you
6 think there is anything in this report you do not
7 wish to pursue. I think you need to be clear about
8 what you want to get, what you have to get clear and
9 make a case for it. I leave that entirely to you.
10 I do not know whether that results in anything or
11 something. But I think probably we are going to
12 have to put it off until tomorrow, given where we
13 are and timing in fairness to Mr Gregory. I do not
14 want Mr Gregory to have to come back tomorrow.

15 MR PICCININ: I do not want that either.

16 MR WARD: Sir, is there any way we could try and resolve
17 this today? I am so sorry to do a special pleading.
18 If is there a way to do it today, this has obviously
19 taken up a lot of time. I confess it has taken a
20 lot of energy on our side dealing with this already.
21 Of course if it leads into tomorrow, it takes
22 another iteration of time. I do not want to place
23 an unreasonable burden on anyone else involved
24 including the Tribunal.

25 THE CHAIRMAN: We cannot sit past half-past 4 today. I

1 am afraid I think the earliest we can address this
2 is tomorrow morning. The question really is how
3 long you need for that because what I do not want to
4 find is that this is messing up the timetable for
5 the rest of the week. It is obviously very
6 important for logistics, particularly for the video
7 evidence.

8 MR PICCININ: Absolutely sir, this is far from the most
9 important point in the case but if we started at 10
10 o'clock I am sure that would give us plenty of time
11 to finish before 10.30.

12 THE CHAIRMAN: That gives you time to get through and
13 tell us what you think say what you want to say
14 about it and anything else Mr Ward wants to say.

15 MR PICCININ: Yes.

16 THE CHAIRMAN: Let us do that. Mr Hoskins?

17 MR HOSKINS: If Apple wants to apply to re-amend its
18 defence, we need to deal with that before the
19 evidence starts as well. Since you are thinking
20 about housekeeping, I just wanted to put that on the
21 menu.

22 MS DEMETRIOU: We were waiting for a response from
23 Dr Kent so we are assuming she is going to explain
24 why she is not consenting, because it is a -- if
25 permission to amend is needed, then it is obviously

1 just a legal argument that causes nobody any
2 prejudice at all. So we would like to understand
3 what the nature of the objection is, but in any
4 event.

5 THE CHAIRMAN: So do you know it is not consented to?

6 MS DEMETRIOU: All I know is what Mr Hoskins said before
7 lunch where he said, "I can tell you we are not
8 going to consent", but we have not had an answer to
9 our letter. I am expecting we will get an answer to
10 the letter. I think the position is, subject to
11 considering what Dr Kent tells us in response to our
12 letter, that our primary position is that we do not
13 need to amend but that I will in the alternative
14 make an application to amend.

15 THE CHAIRMAN: How long do you think that will take? I
16 know you do not know what the objection is.

17 MS DEMETRIOU: It is a very short point. I mean it
18 rather depends on what the nature of the objection
19 is, which is difficult to understand, but assuming
20 there is nothing that I --

21 THE CHAIRMAN: Can I maybe suggest that at least you can
22 see whether you can make some progress over this
23 break we are going to take and give us some
24 indication.

25 MS DEMETRIOU: A time estimate, I will.

1 THE CHAIRMAN: We have got various options, we can either
2 begin a little bit earlier, but I do not really want
3 to be starting any earlier because I know it
4 inconveniences people. We can have a shorter lunch
5 break but, of course, the problem with that is that
6 it is coming after the evidence has started.

7 MS DEMETRIOU: Let me speak to Mr Hoskins.

8 THE CHAIRMAN: If you could come up with a solution for
9 tomorrow that both of you support, that would be
10 quite helpful.

11 MR HOSKINS: Of course, absolutely.

12 (3.24 pm)

13 (Break)

14 (3.33 pm)

15 THE CHAIRMAN: Mr Gregory?

16 MR GREGORY: Sir, can I just check you are happy for me
17 to remain sitting?

18 THE CHAIRMAN: Yes. I hope you are feeling better, at
19 least well enough to be here.

20 Submissions by MR GREGORY

21 MR GREGORY: I am dosed up with various things that will
22 hopefully keep me going for an hour.

23 The CMA is grateful for the opportunity to make
24 submissions today and also for the opportunity to
25 put in its skeleton. I will start with a few

1 introductory words about the CMA's intervention and
2 will then address you on the issues on which the CMA
3 has intervened, predominantly based on our skeleton,
4 though I will also pick up a few points which have
5 been raised in openings.

6 The CMA has a right to intervene and make
7 written submissions in private damages actions in
8 the Tribunal under CAT rule 52. As noted at
9 paragraph 593 of the CAT guide, that provision was
10 introduced to mirror the requirements under
11 regulation 1 of 2003, that the Commission and
12 National Competition Authorities should be able to
13 submit written observations to national courts
14 relating to the application of Articles 101 and 102.
15 Recital 21 of that regulation explained that the
16 purpose of that provision was to promote consistency
17 in the application of the competition rules as
18 between courts and national regulators.

19 To date, the CMA has intervened in nine private
20 damages actions, as well as these proceedings the
21 other cases include *Le Patourel* and *Coll*. In broad
22 terms, there are two types of case where the CMA
23 intervenes. The first is where the CMA has
24 considered or is considering the same or similar
25 issues in its own investigations. Second, where

1 cases raise issues of wider significance to the
2 competition law regime generally, such as questions
3 of law or issues of high level approach, including
4 because the Tribunal's findings may well influence
5 how the CMA has to apply the competition rules in
6 future cases.

7 This case is a bit of both. The CMA has some
8 experience of applying the competition provisions to
9 app stores, including Apple's App Store. You have
10 already been taken to the CMA's mobile ecosystems
11 market study reports based on an investigation
12 carried out between June 2021 and June 2022. You
13 will perhaps not be surprised to learn that the CMA
14 considers that its decisions and reports should be
15 admissible in private damages actions such as these,
16 with it being a matter for the Tribunal of how much
17 weight to place on the CMA's findings. That is in
18 line with the guidance provided by the Court of
19 Appeal in the *FX* judgment, to which you were taken
20 on day one.

21 In terms of the process followed by the CMA in
22 that report, I will just show you one passage from
23 it. It is at bundle {AB6/25/5}. I would be
24 grateful if you could just read paragraph 1.6
25 starting at the bottom of the page and then over the

1 page and look at figure 1.1.

2 THE CHAIRMAN: Yes.

3 MR GREGORY: No doubt throughout the trial the parties
4 will discuss specific pieces of evidence that were
5 relied upon by the CMA for the purpose of making
6 specific findings. The only point that I am making
7 now is that in general terms it was a fairly
8 detailed exercise.

9 I am not going to take you to any more passages
10 in the report. I thought I would just provide you
11 with some references for the transcript in case you
12 wish to familiarise yourself with the CMA's key
13 findings through summary of materials. There is a
14 20 page overall summary at bundle {AB6/41}. The
15 main report that I just took you to is at {AB6/25}.
16 Each of the chapters has a one page summary at the
17 front. The most relevant chapters are chapters 4, 6
18 and 8. Chapter 4 sets out the CMA's findings on the
19 limited competitive constraints faced by Apple and
20 Google in relation to their app stores. You have
21 already been shown the one page summary of that
22 chapter by Mr Hoskins. It is at page 82 of the
23 report.

24 Chapter 6 discussed the various conducts of
25 Apple and Google relating to their app stores,

1 including that they require certain in-app payments
2 to be made using their respective payment systems.
3 The one page summary is at page 181 and the findings
4 relating to App Store payment systems are at pages
5 215-221.

6 Chapter 8 outlines potential market
7 interventions identified by the CMA. The one page
8 summary is at page 279, and appendix H specifically
9 considered Apple and Google's in-app purchase rules
10 and that sits at bundle {AB6/33}.

11 Overall, the report concluded that there was a
12 strong case for interventions across a number of
13 different areas, but that many of these were more
14 suited to being considered further and the CMA's
15 Digital Markets Act powers, again for your notes
16 that point is made at {AB6/25/350}. However, the
17 CMA has also initiated two Competition Act
18 investigations into Apple's App Store and Google's
19 Play Store.

20 First, in March 2021, before the mobile
21 ecosystems study, the CMA initiated a Competition
22 Act investigation into Apple's App Stores terms and
23 conditions. Among other things, that investigation
24 considered complaints by developers that Apple only
25 allowed them to distribute apps to iPhones and iPads

1 via the App Store, but certain payments had to be
2 made using Apple's payment system and relating to
3 Apple's commissions of up to 30 per cent.

4 In August 2024, that investigation was closed
5 on administrative priority grounds. Among other
6 things, the CMA considered that a more holistic
7 consideration of Apple's rules on in-app payments,
8 alongside the wider commercial terms in its App
9 Store, would be more effective under the provisions
10 in part 1 of the Digital Markets Competition and
11 Consumers Act, the DMCCA. The CMA's case closure
12 notice stated that this step did not imply that the
13 CMA considered that the concerns it was
14 investigating were unfounded or had ceased to exist.

15 Second, in June 2022, the CMA launched an
16 investigation under chapter 2, in particular into
17 Google's Play Store rules that obliged app
18 developers to use Google Play's own billing system
19 for in-app purchases. In April 2023, the CMA
20 published a notice of intention to accept
21 commitments offered by Google, which involved giving
22 developers the option of using alternative billing
23 systems for in-app transactions. However, 40 out of
24 43 people who responded to the consultation opposed
25 the commitments, including on the basis that the

1 reduction in fees proposed by Google would not be
2 sufficient to cover the costs of using an
3 alternative billing system.

4 On 21 August 2024, the CMA therefore decided
5 not to accept the offered commitments and on the
6 same day it decided to close the investigation on
7 administrative priority grounds, again noting the
8 possibility that the relevant conduct might be
9 better addressed in an investigation under the
10 Digital Markets Act and that the case closure did
11 not mean that the CMA had concluded that the
12 relevant concerns were unfounded or had ceased to
13 exist.

14 A few days ago, on 7 January, the CMA announced
15 that it expected to initiate two investigations this
16 month into two areas of digital activity under the
17 DMCCA. Yesterday, it announced that the first of
18 those investigations would assess whether Google has
19 strategic market status in respect of search and
20 advertising services and whether those services are
21 delivering good outcomes. The CMA has not yet
22 announced the subject of the second investigation
23 but has said that it expects to do so before the end
24 of January. If the subject matter of that second
25 investigation overlaps at all with these

1 proceedings, the CMA will write to the Tribunal and
2 the parties to inform them.

3 THE CHAIRMAN: Yes, thank you.

4 MR GREGORY: In opening, Apple submitted that given the
5 bespoke digital markets powers that now exist at
6 both the EU and UK levels, it was not appropriate to
7 apply the chapter 2 prohibition to the issues raised
8 by these proceedings. We emphasise that the CMA's
9 decision to close its Competition Act investigations
10 were taken on the basis of administrative
11 priorities, not because it concluded that the
12 existence of the digital markets powers constituted
13 a legal bar to it applying the Competition Act
14 provisions to the conduct. If a regulator has
15 concurrent powers under the Competition Act and
16 sectoral regulation, as many regulators do, they
17 will generally have a discretion as to which of the
18 tools in the tool box they reach for.

19 The proposition, if this is what is being
20 advanced, that the CMA or this Tribunal is now
21 precluded from applying the Competition Act
22 provisions to digital activities, such as those in
23 issue in these proceedings, because of the existence
24 of the Digital Markets Act powers is contrary to
25 binding authority. One example is the General

1 Court's 2010 judgment in the *AstraZeneca* case which
2 concerned an alleged abuse of dominance by a
3 pharmaceutical company in an area that was governed
4 by patent litigation. It was one of the few
5 competition law judgments that was not already in
6 the bundles so we asked for it to be added. It is
7 at {AB4/14.01}. I would be grateful if you could
8 turn to page 139 and read paragraph 366 to
9 yourselves.

10 So as a matter of law, the existence of
11 sector-specific digital markets legislation does not
12 render the competition rules inapplicable to conduct
13 in these markets. There was also the practical
14 point that the CMA's digital market powers do not
15 include the ability for it to require companies to
16 compensate those who may have suffered losses as a
17 result of historical conduct, one of the main
18 purposes of the collective proceedings regime.
19 Consequently, and irrespective of the CMA's
20 preference for considering particular issues under
21 sectoral legislation as a matter of administrative
22 priority, all of Apple's arguments can and should in
23 these proceedings be considered within the
24 Competition Act's legal framework in relation to
25 market definition, dominance, abuse and so on.

1 As it does not have any ongoing App Store
2 investigations under the Competition Act, the CMA's
3 interest in these proceedings is now predominantly
4 based on the fact that they raised three points of
5 law or high level approach that were of wider
6 relevance to the competition law regime. In respect
7 of these three issues, it is therefore seeking to
8 play a traditional amicus curiae role with a view to
9 promoting the consistent enforcement of the
10 competition provisions. Those three high level
11 issues were identified in the CMA's written
12 observations, which summarised the main legal
13 principles and authorities relevant to each area.
14 The first of those high level issues relates to
15 unfair pricing. As has already been noted, the cup
16 of unfair pricing authorities currently runneth
17 over. As you are not short of authorities in this
18 area and you have already been addressed on them at
19 some length I am not planning to say anything about
20 them. The main principles and authorities are
21 summarised at pages 17 to 25 of the CMA's written
22 observations. They include the Court of Appeal
23 judgment in *Phenytoin*, the main domestic authority,
24 and since we submitted those written observations,
25 the Tribunal has handed down its judgment in *Le*

1 Patourel. As already mentioned, the CMA intervened
2 in *Le Patourel* and submitted observations on the
3 correct approach to unfair pricing. The CMA does
4 not express any view about the Tribunal's
5 application of the law to the facts, but in broad
6 terms it considered that in the judgment the
7 Tribunal applied the correct legal framework.

8 The second issue on which the CMA has
9 intervened and the main focus of its skeleton
10 concerns market definition. Shortly, I will briefly
11 comment on a few market definition points raised
12 during openings and in questions from the Tribunal
13 including in relation to assistance markets and
14 aftermarkets, however I will deal first with the
15 market definition points covered in our skeleton,
16 primarily by reference to the skeleton itself. That
17 is in the bundles, bundle {A3/4}. First, however,
18 just to address a point made by Mr Kennelly this
19 morning on our skeleton, we are not saying that the
20 hypothetical monopoly test is mandatory in all cases
21 for market definition. What we are saying is two
22 things.

23 First, if you are going to apply the
24 hypothetical monopoly test, there is a standard
25 framework for applying it. So if you were going to

1 apply it, you should apply it properly.

2 Second, it is a commonly used technique and in
3 general you would expect to apply it in one form or
4 another unless there is a good reason not to, for
5 example because of insuperable cellophane fallacy
6 issues, which I shall come on to. I say in one form
7 or another because as we noted in our skeleton, it
8 is often not possible to apply the test empirically
9 due to data limitations, so it is often used simply
10 as a conceptual tool for the purpose of identifying
11 close substitutes.

12 While I am in responsive mode Mr Kennelly also
13 questioned the proposition at paragraph 36 of our
14 skeleton, which is at page 11. I would be grateful
15 if we could go to that. Page 11 of the document,
16 paragraph 36. I will give the full reference again,
17 the documents reference is bundle {A3/4/11}. I
18 would be grateful if you could just read paragraph
19 36.

20 THE CHAIRMAN: Yes.

21 MR GREGORY: Footnote 23 refers to paragraph 60 of the
22 well-known AKZO judgment. I would be grateful if we
23 could go to that. It is at bundle {AB4/5/15} and go
24 to page 15. I would be grateful if you could read
25 paragraph 60 of that judgment.

1 THE CHAIRMAN: Yes.

2 MR GREGORY: You will be familiar with the distinction
3 between the legal burden and the evidential burden.
4 The Class Representative or regulator always bears
5 the legal burden of proving dominance. However, for
6 any issue, once a party that bears the legal burden
7 has adduced a sufficient amount of evidence, it is
8 possible that the evidential burden may then shift
9 on to the other side to rebut the conclusion that
10 appears to follow. The CMA's position is that where
11 an undertaking has had a market share over 50 per
12 cent for a sustained period of time, that will
13 ordinarily be sufficient to prove dominance, absent
14 evidence to the contrary, and therefore to shift the
15 evidential burden. That proposition is consistent
16 with paragraph 212 of the CMA's guidelines on the
17 assessment of market power (OFT415). That guideline
18 is not in the bundle but we can ask for it to be
19 added.

20 THE CHAIRMAN: Yes, thank you.

21 MR GREGORY: Returning to market definition, as you will
22 have seen, our concern is that the market definition
23 framework should be applied properly. We are not
24 making submissions as to the end point that you
25 should reach on market definition. Rather, we are

1 highlighting aspects of the standard approach to
2 defining markets and suggesting what that might mean
3 for your starting point and for where in the
4 framework various arguments should be considered.

5 Paragraphs 6 and 7 of our skeleton identify two
6 reasons why it is important for the market
7 definition framework to be applied correctly and
8 consistently, in particular in high profile cases
9 such as this. You are a very experienced panel and
10 I imagine have collectively provided a great deal of
11 competition law advice to clients. Such advice
12 often turns on questions of market definition, for
13 example, because it is determinative of whether the
14 company in question is dominant or whether the block
15 exemption applies. If the market definition
16 framework is applied unpredictably by courts and
17 regulators, to which clients and their advisers look
18 for guidance, legal certainty would be undermined
19 and if a misapplication of the framework results in
20 a position of dominance being missed, the effective
21 enforcement of the chapter 2 prohibition will be
22 undermined, to the detriment of competitors,
23 customers and ultimately consumers.

24 Paragraph 10 of our skeleton summarises the
25 basic steps in market definition by reference to the

1 UK market definition guidelines. I do not think
2 those basic steps are contentious. There is a
3 standard framework and it is important that it is
4 consistently applied, but the conclusions must be
5 sensitive to the facts of the case. Applying that
6 framework to the facts almost inevitably requires
7 the exercise of judgment in places, it is not a
8 mathematical formula. When you are making those
9 judgments the touchstone that we say you should come
10 back to, is that the purpose of the market
11 definition exercise is to shed light on the
12 competitive constraints on the relevant supplier in
13 respect of the conduct in issue in the relevant
14 proceedings. Stage one in that assessment is market
15 definition, often carried out by reference to the
16 market power of a hypothetical monopolist, and stage
17 two is the assessment of dominance. In its
18 submissions yesterday afternoon, Apple sought to
19 conflate those two stages but they are distinct and
20 it is important that they are kept distinct because
21 the analysis is different at each stage.

22 At the market definition stage, you are
23 concerned exclusively with close substitutes. The
24 fact that some other product or service imposes some
25 level of competitive constraint is not enough, but

1 when assessing dominance, all competitive
2 constraints, strong or weak, can be taken into
3 account. At that second stage, it is possible that
4 the evidential burden of proof may have shifted on
5 to the undertaking in question, in particular if its
6 market share is above 50 per cent, as I have just
7 discussed.

8 Starting with stage 1, market definition, the
9 first step in the standard in that framework is the
10 identification of the focal product. As we note in
11 the skeleton, there is typically less discussion of
12 the process behind identifying the focal products
13 than there is of the next step, the application of
14 the hypothetical monopolist or SSNIP test, but it
15 can be critical to ensuring that the defined market
16 is appropriate for the particular facts of the case.
17 Identifying the focal product is a fork in the road.
18 If you start with the wrong focal product, your
19 subsequent steps may take you in the wrong
20 direction.

21 A number of key quotations from the market
22 definition guidelines and textbooks are set out at
23 paragraph 14 of our skeleton. The critical point is
24 that the focal product should ordinarily be the
25 products that are the subject of the conduct alleged

1 to be unlawful in that particular case. As the
2 authors of Bellamy & Child note in the passage
3 quoted at subparagraph (c), that leads to a counter
4 intuitive result, namely that markets for the same
5 products or services can be defined differently in
6 different cases. For the purpose of competition
7 law, the boundaries of markets are not like the
8 boundaries of countries, immutable lines that should
9 be drawn in the same place on every occasion.

10 If you turn over the page to page 6 of our
11 skeleton and look at paragraph 15. In its
12 *Spotify* decision, which you have already been taken
13 to, the Commission started with a focal product of a
14 distribution services offered by Apple to developers
15 of music streaming apps. As you can see from the
16 quoted recitals, the Commission did not start with
17 the services offered to a subset of developers
18 because it considered that competitive conditions
19 varied materially as between music streaming apps
20 and other types of app. It started with the
21 services offered to developers of the music
22 streaming apps because it was the imposition of
23 antisteering terms, specifically on that category of
24 developers that was the subject of the complaint by
25 *Spotify* in that case.

1 If you turn to bundle {AB6/45/252}, you will
2 see the operative part of the decision. If you just
3 read Article 1 at the top of the page. The central
4 finding of abuse in *Spotify* was the imposition of
5 antisteering provisions on music streaming service
6 providers. Unlike in these proceedings, the
7 Commission was not asked to find and did not find
8 that Apple had committed an abuse through the
9 imposition of terms on all developers wishing to
10 distribute apps through the App Store. That is why
11 we say, in these proceedings, because the abusive
12 conduct is said to be applied to all developers, the
13 natural focal product is the provision of services
14 to all developers rather than to a subset of
15 developers such as, for example, the developers of
16 gaming apps. That is the case even if, as Apple
17 says, developers and consumers of gaming apps have
18 more substitution possibilities available to them
19 than developers and consumers of other types of
20 apps. Those points can and should be taken into
21 account in the process when considering the
22 profitability of a SSNIP and when assessing
23 dominance. But in the CMA's view, the mere fact
24 that certain categories of customer, amongst the
25 many subject to the allegedly abusive conduct, may

1 have more substitution possibilities available to
2 them, would not ordinarily justify undertaking a
3 separate market definition exercise based on a
4 distinct focal product, specifically in respect of
5 that group. That is because of the ultimate purpose
6 of the market definition exercise, to shed light on
7 the competitive constraints of the supplier in
8 respect of the conduct in issue in the particular
9 proceedings.

10 As we are still at stage 1, market definition,
11 the focus is on the position of the hypothetical
12 monopolist, rather than on the position of Apple
13 within that market. The question is whether the
14 hypothetical monopolist could profitably introduce
15 the SSNIP across the products and customers that are
16 the subject of the allegedly abusive conduct. The
17 fact that the hypothetical monopolist might not be
18 able profitably to introduce a SSNIP only on a
19 particular subset of those products and customers is
20 not determinative of that question. Imagine this
21 very simplified scenario. It is no doubt
22 inaccurate, not least because the CMA is not in the
23 Confidentiality Ring, so I have not seen the
24 relevant figures. It is purely intended to be
25 illustrative at the high level points of principle.

1 Imagine that all categories of app generate the
2 same margin for Apple. Gaming apps constitute half
3 of all apps for example by value. If fewer than
4 4 per cent of developers switch away in response to
5 a SSNIP, the SSNIP is profitable and the market
6 should not be expanded further. If more than 4 per
7 cent switch away, it is unprofitable and the market
8 should be expanded.

9 In response to a SSNIP, 5 per cent of gaming
10 app developers would switch away, 1 per cent of
11 other app developers would switch away and overall
12 3 per cent of all app developers would switch away.
13 So if you were considering whether the hypothetical
14 monopolist could profitably impose a SSNIP only on
15 the developers of gaming apps, the answer would be
16 that it could not. So you would expand the market,
17 for example to include gaming products distributed
18 through other platforms such as on PCs. But in
19 circumstances where you were considering whether an
20 undertaking has position of dominance, in respect of
21 conduct imposed on all developers, the relevant
22 question at stage 1, the market definition stage, is
23 whether the hypothetical monopolist could profitably
24 impose a SSNIP on all developers.

25 These illustrative numbers would indicate that

1 could not, so the market should not be expanded
2 further so as to include, for example, distribution
3 of gaming products by PCs. It is purely
4 illustrative but it highlights why the correct
5 identification of the correct focal product really
6 matters, in order to ensure that the market
7 definition that you finish up with is actually
8 appropriate for assessing the conduct that you are
9 concerned with in the particular facts of the case.

10 THE CHAIRMAN: So the point is the linkage between the
11 focal products and the abuse, effectively?

12 MR GREGORY: Yes. So that is the focal product. You
13 then apply a SSNIP to a market comprised of the
14 focal product and consider whether it would be
15 profitable in the light of switching away. The
16 SSNIP should be imposed on the competitive price.
17 The cellophane fallacy notes that, in particular if
18 the incumbent has market power, the current price
19 might be above the competitive level. Dr Singer,
20 the Class Representative's expert, says that
21 comparators suggest that a competitive commission
22 rate would be around half of Apple's actual
23 commission rate and the fact that Apple has been
24 able to charge double the Commission rate indicates
25 that a SSNIP would be profitable. In its skeleton,

1 and again this morning, Apple said that is circular
2 because it assumes that the current price is
3 excessive, which is one of the main questions for
4 the unfair pricing analysis. We think that
5 objection is fair, while noting that Apple does not
6 propose any solution.

7 A few comments in terms of how you might be
8 able to square that circle. The cellophane fallacy
9 is a well recognised potential problem, for the
10 purpose of market definition, and it is important
11 that it should be taken into account and addressed
12 so far as possible. Problems with potential
13 circularity of reasoning do not mean that you can
14 simply assume the problem away. If the low hanging
15 fruit is if the hypothetical monopolist could
16 profitably raise prices even from current price
17 levels, you can be confident that the market is no
18 wider. That point is made at paragraph 209 of the
19 *Le Patourel* judgment. If that is not the case, then
20 although there is a logical order for the different
21 steps in the analysis, market definition then
22 dominance then abuse, and so on, in practice the
23 Tribunal will be determining all of those issues in
24 parallel for the purpose of writing a judgment. You
25 would therefore be able to approach the various

1 issues iteratively or holistically, taking into
2 account different strands of evidence relevant both
3 to market definition and unfair pricing. In
4 particular, as well as considering comparator
5 prices, you will have evidence about profitability
6 levels. That evidence may be relevant to whether
7 Apple's commission charges are unfair, but also to
8 whether or not Apple's current charges are above the
9 competitive level.

10 If you conclude that the profitability analysis
11 suggests that Apple's current commission rates are
12 above competitive levels, you can take that into
13 account when considering it if there is a risk of
14 the cellophane fallacy applying for the purposes of
15 market definition.

16 I am now going to turn to systems markets, and
17 aftermarkets, on which there have been a few
18 exchanges during opening, in particular involving
19 Dr Bishop. The CMA summarised its view on this
20 issue in its written observations, I would be
21 grateful if you could turn to bundle {A3/1/10}. I
22 would be grateful, it is a minute or so of reading,
23 if you could just read paragraphs 29 to 36 to
24 yourselves.

25 THE CHAIRMAN: Yes.

1 MR GREGORY: Footnote 48 refers to the Commission's
2 analysis of these issues at recitals 415-465 of the
3 *Spotify* decision. I am not going to take you to
4 those recitals but if you could turn back to a
5 passage you looked at on day 1. That is the *Spotify*
6 decision at bundle {AB6/45/100}. At recital 337,
7 the Commission summarises its approach to defining
8 system markets and aftermarkets. The considerations
9 listed there will be familiar from the CMA's written
10 observations that you have just looked at.

11 Dr Bishop asked about the footnote references to
12 authorities. There is one additional authority that
13 I want to flag, that is the 2010 judgment of the
14 general court in the *CEAHR* case, more easily
15 referred to as The *Luxury Watches* case. That is at
16 bundle {AB4/14.1}. The background was that the
17 applicant complained that luxury watch manufacturers
18 had committed an abuse by refusing to continue to
19 supply spare parts to independent watch repairers.
20 The Commission rejected the complaint in part on the
21 basis that there was a systems market that included
22 the market for luxury watches in which the relevant
23 companies were not dominant. The General Court
24 found that the Commission had made legal errors in
25 its assessment. The relevant passage is at page 29

1 I would be grateful if you could read paragraphs 79
2 and 80.

3 CHAIRMAN: Yes.

4 MR GREGORY: You start by applying a SSNIP in the
5 secondary markets, there spare parts, here the
6 provision of service through app developers and you
7 ask whether that SSNIP will be profitable, including
8 in the light of any resulting switching away that
9 would take place in the primary markets, there
10 luxury watches, here smartphones and other devices.
11 I should be grateful if you could turn ahead to page
12 33 and read paragraphs 94 and 95.

13 So when applying the SSNIP test in this way and
14 considering whether customers would respond to a
15 SSNIP in the secondary market by switching in the
16 primary market, you should take into account the
17 respective values of the products in the two
18 markets.

19 Unless you have any questions on market
20 definition, I was proposing to turn to the
21 counterfactual issue addressed in the final few
22 paragraphs in our skeleton.

23 DR BISHOP: Just the observation of the last two
24 sentences:

25 "Furthermore, the price of the spare parts is

1 normally included in that cost, and thus represents
2 an even lower percentage of the purchase price of
3 the new watch. Accordingly, it is evident that a
4 moderate price increase for spare parts remains a
5 negligible sum in comparison to the price of a new
6 luxury/prestige watch."

7 What conclusion did they draw from that. It
8 was not system competition or it is system
9 competition?

10 MR GREGORY: Yes, the General Court concluded that the
11 Commission had erred in finding that there was a
12 systems market.

13 DR BISHOP: Thank you very much.

14 MR GREGORY: So the counterfactual issues are discussed
15 at our skeleton to paragraphs 37-43. In its
16 skeleton, Apple suggested in the counterfactual that
17 it should be assumed that the allegedly abusive
18 conduct would have been in place right up to the
19 start of the claim period. There are two reasons to
20 have the counterfactual, and while you might
21 ultimately end up using the same counterfactual for
22 both. It is important to keep the different
23 purposes in mind.

24 First, you must have a counterfactual for the
25 purposes of estimating aggregate damages. That is

1 an issue for Dr Kent and Mr Hoskins made submissions
2 about that.

3 Second, it may be helpful to consider a
4 counterfactual for the purposes of identifying the
5 effects of the relevant conduct to help you
6 determine whether it is abusive. The CMA often uses
7 counterfactuals for that purpose. The legal
8 position, is as set out by the Court of Appeal in
9 *National Grid*, in the passages set out at paragraph
10 42 of our skeleton. There is no legal requirement
11 to use a counterfactual to prove an abuse and if you
12 are going to use one, the appropriate form of the
13 counterfactual is a matter of judgment and
14 assessment for the decision-maker.

15 Our point is very simple. Namely, that for the
16 purpose of identifying the effects of the conduct in
17 question, it makes no sense to compare the actual
18 world with the counterfactual in which some of those
19 effects are still present, as might be the case, if
20 you assume that the allegedly abusive conduct was in
21 place right up to the start of the infringement
22 period, for example because the market would still
23 be adapting once that conduct had been removed.

24 Yes, you might want to consider what a
25 realistic alternative counterfactual should be, but

1 simply assuming that the unlawful conduct remained
2 in place right up to the start of the infringement
3 period seems to us to be wrong in principle.

4 Unless you had any questions, those are my
5 substantive submissions for today.

6 THE CHAIRMAN: Just on that last point, I think you are
7 saying it is effectively a matter of judgment for us
8 as to how we deal with the transition between the
9 two worlds, and the timing point and that, no doubt,
10 is fact-specific and depends on the way the real
11 world operates. But ultimately we are trying to get
12 to a point for the purposes of the counterfactual
13 concerning abuse, to something which gives us a
14 clear picture of the likely effect?

15 MR GREGORY: Yes, but for the purpose of estimating
16 aggregate damages, you have this question about you
17 know what the delta is between the actual world and
18 the counterfactual and whether there is a glide path
19 and that is all affected by whether you assume the
20 abusive conduct is simply removed in its entirety or
21 is in place. The CMA is not making submissions
22 about that.

23 THE CHAIRMAN: That is why I am very focused on the side
24 of assessing the abuse and the effect of it.

25 MR GREGORY: The counterfactual is a tool to assist your

1 assessment of whether or not the conduct is abusive,
2 and to understand the effects normally, it would be
3 better to compare the effects in the actual world
4 with the counterfactual world in which the abusive
5 conduct and the effects of that conduct have been
6 removed in their entirety.

7 THE CHAIRMAN: Yes, I understand. That is helpful, thank
8 you.

9 MR GREGORY: Finally, just on a procedural point, I
10 wanted to raise the possibility of the CMA making
11 some sort of submissions in closing. First, if the
12 Tribunal would find it helpful for us to set out our
13 position on any issues in closings, we would
14 obviously be happy to do so. Second, we would like
15 to be able to review the written closings and
16 consider whether there are any issues on which we
17 could usefully make further submissions, whether in
18 writing or orally. We appreciate we would need the
19 Tribunal's permission to do that, and so if we would
20 like to make further submissions, we will write to
21 the Tribunal and seek permission.

22 There is only one practical point arising from
23 that, which is that the timetable at the end of the
24 trial is quite tight and to allow us to do that in a
25 timely manner, in particular in time for the parties

1 to make any responsive points they might want to
2 make, it would be very helpful if we could receive
3 non-confidential versions of the written closings at
4 the same time that they are served on the Tribunal.

5 THE CHAIRMAN: Just so I understand, is the position,
6 obviously your observations are as of right as you
7 indicated at the beginning. Does that remain the
8 position for closings as to the point about
9 supplying of the skeletons, the closing submissions
10 I mean. In other words, if you wanted to turn up,
11 do we need the views of the parties or are you just
12 saying if you want to turn up, you could?

13 MR GREGORY: Yes, I think if we want to make submissions
14 at closing whether written or oral we will obviously
15 write to the Tribunal and seek your permission to do
16 that.

17 THE CHAIRMAN: So as the rules say you do now have
18 permission to do, to turn up at all. I cannot quite
19 remember how it works, yes, that is helpful.

20 MR GREGORY: Yes, the rules allow us to make written
21 observations, which you have obviously done in the
22 original.

23 THE CHAIRMAN: It's their effect and everything after
24 that. That is helpful, thank you.

25 Mr Hoskins, Mr Kennelly, is somebody going to

1 tell me whether there are any views on that?

2 MR HOSKINS: I am going to be taking instructions is

3 probably what will be happening.

4 MR KENNEDY: I have a housekeeping matter, sir. I am

5 mindful the Tribunal has a hard stop at 4.30 but

6 there is one housekeeping point which happily is not

7 contentious.

8 THE CHAIRMAN: Well just before you get on to that --

9 MR KENNEDY: Of course, I can come back to that.

10 THE CHAIRMAN: Fine. I just wanted to finalise this

11 point about the CMA's position. Do you have a

12 position on that?

13 MR HOSKINS: Let me just take instructions on that.

14 THE CHAIRMAN: Yes.

15 MR HOSKINS: Sir, we are happy for the CMA to come if

16 that would be helpful. Just on the timing, we will

17 get them a non-confidential version as quickly as we

18 can but it might not be at exactly the same time for

19 obvious reasons.

20 THE CHAIRMAN: I think we are due to get it at the happy

21 time of 10 pm.

22 MR HOSKINS: I do not know whose idea that was, it was

23 not my idea I promise, on the 19th which is a

24 Wednesday.

25 THE CHAIRMAN: I am not anticipating that they are going

1 to be full of confidential material, presumably.

2 MR HOSKINS: If it is possible, you know, they will get
3 it at the same time.

4 THE CHAIRMAN: I imagine Mr Gregory is not going to be
5 waiting up for them but it would be quite helpful if
6 they were available during the day on the 20th.
7 Would that be sensible?

8 MR HOSKINS: We can liaise with Mr Gregory. If it looks
9 like there is a delay we can obviously let him -- he
10 can phone me up and I will tell him where we are at.
11 Perfectly happy to do that.

12 MR KENNELLY: I am afraid we cannot commit now to
13 producing a non-confidential version by that time.
14 It is highly compressed and so we will have to
15 reflect overnight on whether that can be done by the
16 20th. There is also a question about and again it
17 is not for the Tribunal to decide it now, the CMA
18 will have to ask, for timing for them to make
19 submissions orally if they choose to because the
20 timeframe for closings is highly compressed at the
21 end of the trial.

22 THE CHAIRMAN: Well you have got five days for it. It is
23 not in my view highly compressed.

24 MR KENNELLY: Well actually in a trial of this magnitude
25 with the amount of evidence it is actually

1 unfortunately compressed. As you have said
2 yourself, sir, already the timetable is tight and
3 there is a huge amount of evidence to get through.

4 THE CHAIRMAN: Mr Kennelly, I understand obviously lots
5 is going on, all these things are quite difficult
6 and somebody has got to work hard for it, but the
7 reality is you are going to be writing these things,
8 you have probably started writing them already and
9 as they progress, somebody having an eye to what is
10 confidential or what is not is not unreasonable, to
11 say within 24 hours you have got to produce a
12 non-confidential version, is it? Why do not you go
13 away and think about it?

14 MR KENNELLY: We will have a think about it but
15 genuinely --

16 THE CHAIRMAN: That is what I am inclining towards so I
17 would need some quite good reason not to. Given, as
18 I say, you will be working on them as we go and you
19 have got quite a lot of time. We are not talking
20 about a huge amount of material, I would imagine, we
21 are talking about numbers and so on. The
22 alternative would be to put Mr Gregory into the
23 ring. If you would rather do that. I do not know,
24 Mr Gregory whether you would be prepared to do that.
25 You may prefer not to.

1 MR KENNELLY: Shall we just take it in stages, sir. All

2 I am saying is the cross-examination of the experts
3 finishes on the 14th, the timeframe for the
4 production of the document itself is very compressed
5 and although obviously we can begin it earlier and
6 of course we will, as you know, sir, the critical
7 crunch point for the production of the written
8 closing is at the very end, when the output of the
9 expert cross-examination is revealed. So it is a
10 very compressed timetable. All I am saying, sir, is
11 give us a bit of time, please do not bounce us into
12 saying something now that turns out to be impossible
13 or impractical. Let us reflect on it.

14 THE CHAIRMAN: That is fine and you are not objecting in
15 principle.

16 MR KENNELLY: We are not objecting in principle to it but
17 it cannot prejudice our preparation for closings.

18 THE CHAIRMAN: As to the CMA for closing submissions, you
19 again are not objecting in principle it just needs
20 to work practically?

21 MR KENNELLY: In oral closings?

22 THE CHAIRMAN: Yes.

23 MR KENNELLY: Again, I am not saying never now, but we
24 would need a very frank discussion with them about
25 what they envisage because we do think that the

1 timetable for oral closings is compressed and so we
2 need to discuss with them what they envisage in
3 terms of time.

4 THE CHAIRMAN: Do you have any sense, I suppose you do
5 not have any sense of how much time you might need
6 Mr Gregory, are we talking the order of an hour two
7 hours?

8 MR GREGORY: It is difficult to say but, I mean, if we
9 had an hour again I think that results in 12 hours
10 each for all closings for the parties.

11 THE CHAIRMAN: Mr Kennelly, I think I am going to bounce
12 you on that. I mean as far as we are concerned we
13 would find it very helpful to have, we found the
14 submissions, the written observations in the
15 skeleton as very helpful and I am grateful for the
16 time and effort the CMA has put into it and we would
17 find it helpful to have further written submissions
18 and attendance in the closings. So we are going to
19 order that that should happen. That is in the
20 expectation that it is going to be in the order of
21 an hour to two hours and we can find time for it on
22 the timetable, I am sure we can manage it.

23 MR KENNELLY: An hour, certainly, sir, we could see how
24 that could work. The CMA will not be attending on
25 the evidence so one imagines their submissions will

1 be in relation to the law.

2 THE CHAIRMAN: One assumes they are going to follow the
3 same path as Mr Gregory has described, which is they
4 are here to keep us on the straight and narrow in
5 relation to the points of principle they think
6 important. I do not imagine it goes beyond that.

7 So I think that is our decision in relation to
8 the attendance. As to the timing, I think I can say
9 that the expectation is that some time on the 20th
10 we would expect a non-confidential version to
11 arrive. I am not going to order that but if you
12 want to reflect on that and think there might be a
13 better way of doing it like putting Mr Gregory in
14 the ring or doing something different, then we can
15 have that conversation. That is where it is going.

16 MR KENNELLY: I am obliged. That is a clear steer just
17 let us think about it. Obviously, we seek to be as
18 helpful as possible but we do not want to be
19 prejudiced and of course it is important that we
20 have time to reflect on what Mr Gregory says. The
21 position is not quite as neutral as it appeared in
22 their written observations. The skeleton and their
23 oral submissions gave it a rather different slant
24 and so we need the opportunity to respond to that.

25 THE CHAIRMAN: It is inevitable, is it not, that if they

1 are making observations on points that they think
2 are important, sometimes they are going to favour
3 one party and sometimes they are going to favour
4 another. That rather depends on where the parties
5 are and how it falls out.

6 MR KENNELLY: There is a rather different degree of
7 favour. I think there was one, you know, little
8 gift that we were thrown.

9 THE CHAIRMAN: Perhaps it might keep everybody honest,
10 Mr Kennelly.

11 MR KENNELLY: Let us see, sir. The last point I had was
12 that, just for the Tribunal's timetable, some good
13 news. Mr Kosmyuka, if you recall we had asked that
14 we have an early start to accommodate him on Friday.
15 He was due to start at 9.30. He is now able to
16 start at 10.30.

17 THE CHAIRMAN: So that means we do not start early on the
18 17th.

19 MR KENNELLY: So it is possible that we can now start with
20 Mr Kosmyuka on Friday at 10.30.

21 THE CHAIRMAN: That is very helpful, thank you. So just
22 before we finish then. Mr Gregory, is there
23 anything else? Are you happy with that outcome?
24 Obviously, if there are any issues about how that
25 all works in practice then you can write to us.

1 MR GREGORY: I think if we get the submissions the
2 following day, that would allow us to review them.
3 They are going to be lengthy documents so it will
4 take some time to review them let alone produce
5 something in writing, if that is what we are going
6 to do.

7 THE CHAIRMAN: I think it would be useful to have
8 something in writing just for obvious reasons, but
9 how and when that happens we can work out a bit
10 later perhaps. Perhaps you might think about some
11 timings for that, suggest some, so we all know what
12 is coming when, that would be helpful. Thank you
13 very much for your assistance.

14 Who was next? I think Mr Kennedy?

15 MR KENNEDY: I think it is me, sir. Sir, you will hear
16 Mr Kosmyinka's evidence now at 10.30 on Friday. We
17 are mindful the proceedings should be in open as far
18 as possible but Mr Kennelly and I have had a couple
19 of conversations and we think that in the
20 circumstances it would be better if Mr Kosmyinka's
21 evidence was heard in private. I can show you the
22 statement.

23 THE CHAIRMAN: I have read the statement.

24 MR KENNEDY: You will have seen that there is a
25 significant amount of confidential marking.

1 THE CHAIRMAN: Yes there is. Just to be clear there is
2 all sorts of confidentiality littered through this.
3 I understand that. The approach I would like you to
4 take is to consider, is there any of your
5 questioning which you think you could safely do in
6 open court even if it is only five or ten minutes.
7 I would like to start with that if it is possible
8 and if it is not possible then obviously we will
9 start in closed session. What I do not want to do
10 is just to default to being in closed session
11 because there is going to be some material that is
12 difficult. I appreciate it puts an extra burden on
13 you in terms of organising your cross-examination.
14 I am sorry if that is not how it looks at the moment
15 but it is a very important principle.

16 MR KENNEDY: Of course, sir, and that is why we raise it
17 now to get that indication.

18 THE CHAIRMAN: Or I do not mind doing it the other way
19 round, if you want to do the more sensitive material
20 first. It is probably easier to think about the
21 other way, what can you do that does not require
22 us -- and in that I am assuming that there will be
23 bits where you are going to be confidential and are
24 not. It does not make any sense to me to be open
25 and coming backwards and forwards, so I am not

1 suggesting you do it by question, divide it by
2 question. I think by topic really is the point,
3 there are topics that you can do that you are
4 confident are clean, then let us do those in open,
5 then the moment you run out of that, then let us go
6 to closed.

7 MR KENNEDY: Sir, we will continue to reflect on it.

8 Part of the concern is that it has not so far been
9 necessarily possible to identify topics which we are
10 confident are clean and are confi.

11 THE CHAIRMAN: If that is the conclusion you get to, then
12 we have to start and finish and close.

13 MR KENNEDY: It is partly out of fairness to Mr Kosmyuka,
14 because whereas I might be confident my question
15 does not involve any confidential material, he might
16 want to answer by reference to matters which are
17 confidential to Apple.

18 THE CHAIRMAN: That is a bit more problematic and I
19 think, you know, you could take that view with
20 pretty much anything, really. You need to do your
21 best to try and work out what is safe and what is
22 not. If you reach the conclusion that there is not
23 anything that is safe, then that is fine. If you
24 are in doubt then obviously you can discuss it with
25 Mr Kennelly. If during the course of events it

1 becomes apparent there is straying, or Mr Kosmyuka
2 looks like he is in difficulty, then I will
3 certainly be alert to that as well. Then we will
4 need to park that question.

5 MR KENNEDY: Of course, sir. I was going to indicate
6 that to Mr Kosmyuka as I start, that he should
7 indicate to you or his advisers if he feels
8 uncomfortable that he is straying into matters.

9 THE CHAIRMAN: It is not ideal, I appreciate it makes it
10 difficult for you, but on the other hand, what I do
11 not want to do is find we are defaulting to closed
12 session all the time and then finding there is quite
13 a lot in there that could have been dealt with in
14 open.

15 MR KENNEDY: If it turns out it is all closed, I will
16 indicate that first thing on Friday morning but I
17 wanted it raised it now just to get that indication.

18 THE CHAIRMAN: Thank you, Ms Demetriou?

19 MS DEMETRIOU: Sir, yes, just on the amendment
20 application. I spoke to Mr Hoskins and we think
21 that between us it will probably take about 20
22 minutes.

23 THE CHAIRMAN: So should we try and do that at 10 o'clock
24 instead, then? Start at 10 with that and then which
25 means that we will find some time for Professor

1 Hitt, either over lunchtime or depending on how the
2 witnesses go. We know we will not be getting
3 Mr Parekh until 2 o'clock, is that right?

4 MS DEMETRIOU: That's correct, sir.

5 THE CHAIRMAN: So I do not know if you still think you
6 are going to be the morning with Mr Owens.

7 MS DEMETRIOU: That is Mr Kennelly. I think the
8 assumption is you are going to be the morning.

9 MR KENNELLY: Yes, Mr Owens.

10 THE CHAIRMAN: If you do not mind, Mr Piccinin, we might
11 just see if we can fit it in somewhere but being
12 mindful it needs to be said, I think obviously
13 Mr Ward has impressed on us the need to know where
14 he is.

15 MR WARD: Yes, sir. If I can just explain I would not
16 otherwise be attending the Tribunal tomorrow morning
17 for Mr Kosmyinka's cross-examination -- I am so
18 sorry, Mr Owens' cross-examination. I do intend to
19 attend in the afternoon for Mr Parekh. So if it
20 could be dealt with after Mr Parekh tomorrow.
21 Mr Parekh goes into Friday as well, I think. Sorry,
22 I do not have the timetable in front of me.

23 THE CHAIRMAN: Or we could do the half-past 1, if that is
24 convenient?

25 MR WARD: Yes of course, if that would be -- I do not

1 mean to impose my own convenience on the Tribunal.

2 THE CHAIRMAN: It has got to happen somewhere and on the
3 assumption Mr Kennelly is going to keep us busy
4 until 1 o'clock, then it probably is the obvious
5 answer. I would much rather do it over a shorter --
6 unless people object to that I think it is a much
7 better thing to do than prolong the day.

8 MR WARD: It confines the argument. Thank you, sir, I am
9 personally grateful for that proposal.

10 THE CHAIRMAN: We will sit at 10 o'clock. We will do the
11 amendment and then we will deal with Professor Hitt,
12 Hitt 4 at 1.30. Anything else?

13 Very good, thank you very much. We will see
14 you at 10 o'clock.

15 (4.34 pm)

16 (Adjourned till 10 o'clock tomorrow morning)
